LOTHROP, LEE & SHEPARD CO., Boston

A History of England
Written by various authors under the direction and editorship of C. W. C. Oman, Deputy Chichele Professor of Modern History, Oxford.
Six volumes, 8vo, cloth. Each, net, $3.00.
The second volume, now ready, is:
Vol. IV.—England Under the Tudors.
By Arthur D. Innes.
The Tudor period was a time of great events, striking characters, dramatic situations. Mr. Innes's first aim has been to present the narrative—which is often complex—truthfully, fully, and clearly, preserving historical proportions; his second, to do so vividly and picturesquely.
Previously issued:
ENGLAND UNDER THE STUARTS
By George M. Trevelyan.

Talking Points for

THE FOUR-TRACK NEWS

Which Explain Its Emphatic Success

Here are a few reasons why you want THE FOUR-TRACK NEWS on the reading table in your home. Look them over, think them over—then send for a sample copy and see if you don't think THE FOUR-TRACK NEWS is worth $1.00 a year to yourself and your family.

Its scope is confined to no geographical section; the world is its field.

It instructs.
It entertains.
It's different.
It is a universal favorite.
It is always and forever up-to-date.
It is a great help to students in history classes.
There is much in every issue of educational value to every reader.
It is entertaining to the father and mother as well as to the children.
It is eloquent with bright, brief, valuable articles and superb pictures.

Subscriptions, $1.00 a Year; Foreign Countries, $1.50; at News-stands, 10 Cents a Copy.

A sample copy and our special terms to agents will cost you nothing. Send your address and two references to
GEORGE H. DANIELS, Publisher,
Room No. 56, 7 East 42d St., New York.

LADIES TOURING ITALY will find home comforts in refined family. Excellent references. Address
Mme. MENGOZZI, Via Colletta 2, Florence, Italy.

A Graded Course of Moral Education for the Young

In Four Volumes
By WALTER L. SHELDON

Absolutely undenominational on subjects pertaining to religion—for use in the home, week-day school and Sunday-school. Vol I. "Old Testament Bible Stories for the Young" (warmly commended by clergymen of many denominations). Vol. II. "Lessons in the Study of Habits." Vol. III. "Duties in the Home and the Family." Vol. IV. "Citizenship and the Duties of a Citizen" (this volume warmly commended by Prof. Franklin H. Giddings of Columbia University).

Sent, postage prepaid, on receipt of $1.00 per volume, by Mrs. R. M. NOONAN, Chairman Publication Committee, Ethical Society Rooms, Museum of Fine Arts, St. Louis, Mo. The money will be refunded if books are found unsatisfactory.

THE UNIVERSITY OF CHICAGO PRESS

NEW BOOKS

General Sociology — ALBION W. SMALL

Professor Small's main proposition is that the traditional sciences relating to the spiritual sides of life are sterile, unless they are carried out to a point at which they blend in one system of knowledge. The book is an exposition of the development of social theory from Spencer to Ratzenhofer, and a plea for the completion of the general structure of social science.

753 pp.; 8vo, cloth; net $4.00, postpaid $4.23.

A Decade of Civic Development — CHARLES ZUEBLIN

The author gives a concise and spirited account of certain definite measures—political, economic, social, and artistic—for the betterment of American cities. Professor Zueblin was formerly president of the American League for Civic Improvement. He is the author of *American Municipal Progress* and other volumes.

200 pp.; 12mo, cloth; net $1.25, postpaid $1.39.

Primary Facts in Religious Thought — ALFRED W. WISHART

Seven short essays intended to state, in a simple and practical manner, the essential principles of religion, and to clear them from the confusion arising from theoretical changes and historical criticism.

125 pp.; 12mo, cloth ; net 75c., postpaid 82c.

Egoism: A Study in the Social Premises of Religion — LOUIS WALLIS

In this essay the author first sets forth the proposition that "egoism is the only 'force' propelling the social machine." This thesis he then proceeds to demonstrate by evidence drawn from biblical history. Lastly he shows its practical bearing on the present social problem.

137 pp.; 16mo, cloth; net, 75c, postpaid, 85c.

Methods in Plant Histology — CHARLES J. CHAMBERLAIN

An indispensable book for students of Botany. The volume contains directions for collecting and preparing plant material for microscopic investigation. It is the first complete manual to be published on this subject. Second edition, illustrated.

272 pp.; 8vo, cloth; net $2.25, postpaid $2.39.

RECENT BOOKS OF IMPORTANCE

Christian Belief Interpreted by Christian Science — CHARLES CUTHBERT HALL

This interesting volume contains the "Barrows Lectures" delivered by President Hall in the leading cities of India and Japan, in connection with the lectureship founded by Mrs. Caroline E. Haskell.

In these days, when the momentous events in the Far East have quickened an interest in all things Oriental, this thoughtful and earnest work should be welcomed by everyone who desires to go below the surface for an explanation of the message from the mysterious East for which all are waiting.

300 pp.; 8vo, cloth ; net $1.50, postpaid, $1.66.

Prophetic Element in the Old Testament — WILLIAM R. HARPER

A scholarly handbook for advanced students. This volume is the latest in the series of Constructive Bible Studies. 150 pp.; 8vo, cloth ; postpaid, $1.00.

Russia and Its Crisis — PAUL MILYOUKOV

The *New York Times*, under date of August 26, says: "It is not often that an author is so forcibly reminded of the truth of his own printed words as Professor Paul Milyoukov has been. His book on Russia, which we review this week, describes the 'attempt at welding autocracy and liberalism,' now under way in his native land. The last few days have given a striking exemplification of both the liberalism and the autocracy. The Czar has issued his rescript instituting a National Assembly, and within a fortnight of it his Government has arrested Professor Milyoukov for his activity in promoting agitation for reform in the empire."

602 pp.; 8vo, cloth, net, $3.00, postpaid, $3.20.

Place of Industries in Elementary Education — KATHARINE E. DOPP

"The book deals with the basic principles of manual training, and is a distinct contribution to the practical pedagogy of today." Third edition. Revised. Illustrated. 278 pp., cloth ; net, $1.00, postpaid, $1.11.

A Bulletin of New Books, which contains detailed announcements for the year will be mailed free upon request.

THE ENGLISH DIALECT GRAMMAR

COMPRISING

The Dialects of England, of the Shetland and Orkney Islands, and of those parts of Scotland, Ireland and Wales where English is habitually spoken.

BY

JOSEPH WRIGHT, PH.D., D.C.L., LL.D., LITT.D.

Fellow of the British Academy, Professor of Comparative Philology in the University of Oxford, Editor of the English Dialect Dictionary.

FROM THE PREFACE.

The scope of this Grammar is briefly indicated on the title-page, but those who consult it must not expect to find each and every dialect treated with that minuteness which ought to be given in a grammar dealing with one single dialect. My endeavor has been to bring out as far as possible the main characteristic features of all the dialects, and to furnish philologists and others interested in the subject with a concise and systematic account of the phonology and accidence.

It is the first Grammar of its kind ever written, and there can be no doubt that had the collecting of the material for it been delayed another twenty years, it would by then be quite impossible to get together sufficient pure dialect material to enable anyone to give even a mere outline of the phonology of our dialects, as they existed at the close of the nineteenth century, so rapidly is pure dialect speech disappearng, even in country districts, owing to the spread of education, and to modern facilities for intercommunication.

Some idea of the great labour involved in the compilation of the index can be formed when it is stated that it contains 2,431 words, 15,924 dialect forms, and over 90,000 references to counties or parts of counties.

New Macmillan Books for the Holidays

PUBLISHED THIS DAY

Mr. Henry George, Jr.'s The Menace of Privilege

A Study of the Dangers to the Republic from the Existence of a Favored Class. *Cloth, 12mo, $1.50 net (postage 13c.)*

Mr. George describes the extent of privilege in this country, its princes and their weapons, its victims and their resistance, its influence on politics and on public opinion, and the remedy. The book is not an outcry of pessimism; it is a word of warning, but also of hope.

PRACTICAL LIVING

President Henry C. King's Rational Living

Some Practical Inferences from Modern Psychology. By HENRY CHURCHILL KING, Ph.D., President of Oberlin College, and author of "Theology and the Social Consciousness," etc. *Cloth, 12mo, $1.25 net (postage 12 cts.)*

Prof. Peabody's Jesus Christ and the Christian Character

By FRANCIS GREENWOOD PEABODY, Plummer Professor of Christian Morals at Harvard University, author of "Jesus Christ and the Social Question," "The Religion of an Educated Man," etc. *Cloth, 12mo, $1.50 net (postage 11 cts.)*

OUT-OF-DOOR WORK

Mr. Harwood's New Creations in Plant Life

By W. S. HARWOOD. An Authoritative Account of the Life and Work of Luther Burbank, of whose success in creating new varieties of flowers, fruits, etc., no detailed account has ever before been published.

Cloth, 12mo, $1.75 net (postage 15 cents)

Mrs. Saint Maur's A Self-Supporting Home

Mrs. SAINT MAUR describes how she set about establishing a self-supporting home in the country with absolutely no capital. It is fully illustrated from photographs. *Cloth, $1.75 net (postage 14 cents)*

COPYRIGHTED PLAYS

Mr. Clyde Fitch's The Climbers *Ready Shortly*

An original American play, uniform with the plays of Henry Arthur Jones. *Cloth, 16mo, 75 cents (postage 7 cts.)*

Mr. Winston Churchill's The Title-Mart

A comedy in three acts. Uniform with the above. *Cloth, 75 cts. In preparation*

NEW NOVELS

Mr. F. Marion Crawford's Fair Margaret *A Portrait*

A story of modern life in Italy by the author of "Saracinesca," "The Heart of Rome," "Whosoever Shall Offend," etc.

Illustrated. Cloth, $1.50

Mr. Charles Major's Yolanda Maid of Burgundy

By the author of "Dorothy Vernon of Haddon Hall," etc. *Illustrated. Cloth, $1.50*

"Undiluted romance . . . an old-fashioned love-story."—*N. Y. Tribune.*

Mr. Emerson Hough's Heart's Desire

The Story of a Contented Town, Certain Peculiar Citizens, and Two Fortunate Lovers. By the author of "The Mississippi Bubble," etc. *Illustrated. Cloth, $1.50*

"There is a crisp and vital quality about it that is refreshing."—*Brooklyn Eagle.*

Miss Beulah Marie Dix's The Fair Maid of Graystones

By the author of "The Making of Christopher Ferringham," etc. *Cloth, $1.50*

"Written in straightforward pungent English, a stirring, picturesque tale of the right Dumas sort, with here and there touches of a kinder delicacy than Dumas knew."—*Boston Transcript.*

Miss Marie van Vorst's Miss Desmond

A new novel of society life by the author of "Philip Longstreth," "Amanda of the Mill," etc. *Cloth, $1.50*

FOR YOUNGER READERS

Mr. Jack London's Tales of the Fish Patrol

By the author of "The Call of the Wild," etc. *Now Ready. Illustrated. Cloth, $1.50*

By the author of "Wild Neighbors," etc. *Now Ready. Illustrated. Cloth, $1.50*

Dr. Max Nordau's The Dwarf's Spectacles

And Other Fairy Tales. Translated from the German by MARY J. SAFFORD.

With about fifty illustrations. Cloth, $1.50

Published By **THE MACMILLAN COMPANY** 64-66 Fifth Ave. New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 16, 1905.

The Week.

Among the indirect results of the late elections, the conversion of Gov. Pennypacker of Pennsylvania to the cause of reform surely ranks first. A judge of repute before the machine drafted him for the Governorship, an exemplar of homely honesty in his personal relations, a scholar and antiquarian of parts, Pennypacker had perversely devoted himself and his talents to the defence of everything that was bad in the politics of his State. He simply refused to believe the facts which every Philadelphian knew about gang-rule in his city, regarded the demand for personal registration as of no importance, and signed the outrageous "ripper" bill of last winter on the specious ground that, if the voters did not like it, they could elect legislators who would repeal it before it took effect. It is an event for jubilation as well as surprise that he has now called the Legislature in special session, recommending in his message practically the entire series of reforms for which the minority had so long been vainly struggling. A personal-registration law, the basic reform on which all others are to be built up, he recommends, with—in less definite language—restoring to the mayors of cities the power of appointment taken away by last year's Legislature. Legislation designed to break the unholy alliance between the State Treasury and the pet banks of the State is also on his programme. A comparison of the Governor's case with that of Mayor Weaver is naturally in order. Both were put in office as complaisant machine men; both—though it took the Governor a long time to do so—came to a realizing sense of what the old régime meant, and now Pennypacker has the chance to make himself remembered with Weaver as emancipator of his commonwealth.

Gov. Herrick of Ohio has been discoursing on the text of the November elections. He is naturally something of a weeping prophet. He admits that the people were in search of honest men and pure government, but laments that they made such an awful mistake in Ohio as to reject him. Jerome's victory Gov. Herrick can understand; the grounds and motives of the uprising against corruption in Philadelphia and the whole of Pennsylvania he can appreciate and admire; but in his own case he is painfully aware that a good man was sacrificed to prejudice. Passing by this somewhat ludicrous exhibition of his own wounds, one observation of Gov. Herrick's deserves attention. It is, that a sort of blind and vindictive desire to punish somebody was evident in the breaking up of the fountains of the political great deep; and that mere punishment is not a wholesome or fruitful principle in public life. It would be easy to demur to this. Surely, it is well that corrupt and complacent bosses should have a foretaste of the day of judgment now and then. Grant that the fury which comes to them with the abhorred shears is blind; still she gives them the needed reminder that they are but mortal men, that their power is hollow, and that their riches have wings. Consider the case of Boss Murphy. Two months ago he had the most engaging programme marked out. His Mayor was to be elected by 100,000 majority. The boss triumphant was then to strike for the leadership of the Democracy of this State, next to move on conquering into national politics, naming a Governor and President, and graciously receiving adulation and more of "the stuff." But now all that has vanished like a scene in the theatre, and Murphy is fighting for his life. Such retribution before the grave is righteous and beneficial, we maintain, even if there were an element of vindictiveness in its infliction by the people. The present plight of Murphy, of Durham, of Lentz, of Cox, of Dick and Penrose and Lodge, is full of moral instruction, whether the rage of the voters vented upon them is but a brief madness or not.

In addition to justice, political expediency demands that every step be taken to ascertain the true result of the election on Tuesday week. Hearst as Mayor would be far less formidable than Hearst as a fomenter of discontent and disorder who could allege that he had been cheated out of the Mayoralty. In office, he could be trusted to discredit himself and his cause, and to alienate his support. Out of office and with a grievance, he could inflame the social passions to which he appeals, and make them take on a more furious violence. Hence his stoutest opponents, those who dread him most, should welcome the fullest inquiry into the results of the voting. Every legal remedy should be put freely at the disposal of Hearst and his lawyers. Even their wildest allegations should be sifted. Let them bring forward every claim and charge that they can think of, and have each put to the test of law and evidence, so that, if Mayor McClellan shall finally be found legally elected, the cries of fraud shall have been shown to be baseless. To meet Hearst's demands for an investigation by the pettifogging methods of a *nisi prius* lawyer would be the worst of blunders. Let every ballot be inspected and the true count made clear as noonday. Mayor McClellan's statement of his own attitude is far too hesitant and grudging on this point.

The announcement that the new association to prevent corrupt practices will also devote its attention to a reform of the ballot shows that one of the important lessons of the election is being widely recognized. The agitation must be kept up day by day, even after the Mayoralty contest is settled. Should McClellan be found to be elected by ballots wrongly discarded, it will be unanswerable proof of the failure of the law to prevent the stealing of an election. This would complete the indictment. It is known now that the ballot does not always insure secrecy; that it incites to minor frauds, and is planned to trick the voters in the interests of the bosses; that it puts such heavy burdens on the courts as to make their break-down possible. What good can be said of the ballot save that it is an advance on the primitive methods of earlier days? Certainly, it cannot be claimed that the ballot is just to candidates whose names are far down on the party column. To cite only one case: in 1897, the candidates for Chief Justice of the Court of Appeals received in this city alone 90,000 fewer votes than were cast for the Mayoralty candidates. There was, of course, an especial reason for that, but in every election the vote similarly tapers off, because thousands fail to understand the system of voting.

The candidate for Lieutenant-Governor in Massachusetts, Henry M. Whitney, who ran against Lodge's personal candidate, with opposition to the Senator-boss as one of his chief issues, did not run so far ahead of his party ticket as Douglas did last year. Yet relatively he made nearly as serious an inroad on the Republican ranks as did Gov. Russell in 1892 when the State was carried for Harrison. The Bay State's habit of promoting lieutenant-governors to the chief executive office—a meritorious policy if of the people and not of the machine—has been followed in Mr. Guild's case, after a year of virtual probation. It was to the second place on the ticket that everybody looked for an expression of opinion regarding Lodge. Guild, one of the men who were overruled in their desire for a Republican reciprocity plank, wins by 23,116, while Draper, the avowed representative of the inseparable stand-pat and Lodge interests, crawls through by less than 2,500 votes.

There will be regret, amid rejoicings elsewhere, at the defeat of the reform ticket in San Francisco. Under the domination of Abraham Ruef, the Murphy of Mayor Schmitz, the city has been run in the interests of grafters and law-breakers. Masquerading as a labor-union administration, the Schmitz government has been one which honest workmen must despise, for it means their identification with "red lights" and other tokens of unmitigated evil. John S. Partridge, the reform leader, made a notable fight, proving himself a fearless, outspoken young leader, and giving the Ruef "gang" a bad scare. As it was, Partridge did well to hold the machine down to only 15,000 plurality. Four years hence the uprising against bosses should infect San Francisco. Meanwhile, the city is to be pitied. Not only its moral welfare, but its proper municipal and business development as well, is injured by the continuance of the labor demagoguery which rules the municipality.

Two important steps towards the reform of our consular and diplomatic service were announced on Saturday. Hereafter, no one can obtain any consular post without first passing the examination which has hitherto applied only to positions the salaries of which are under $2,500 a year. Fitness will henceforth be the test for important offices as well as for unimportant. Of course, much will depend upon the examinations and the stiffness of the marking, but the mere threat of a written test should suffice to keep out of consulships some of the rural Dogberrys who have disgraced the nation hitherto, and given all America so unenviable a reputation abroad. The State Department has also decided that no one can become secretary of legation who is not master of one language besides his native tongue. These are in themselves encouraging rulings, but the promise of further improvements they hold out is even more gratifying. Both the President and Mr. Root are awake to the need of reform, and it is said that this Administration will insist on a graded service of such permanence as to attract men to it for a life career. The President recommended this to Congress in his last message for the consular service.

We saw noted the other day the shipment of a quantity of Bibles and of playing cards for the employees on the Isthmus of Panama. On Thursday the Isthmian Canal Commission authorized Chief Engineer Stevens to build a $7,500 clubhouse for his men at Cristobal. Half-a-dozen more clubhouses are in contemplation. Thus proceed the plans for making life endurable in the canal zone. The hand of the "welfare experts" called in at last is everywhere to be discerned. The Commission has learned thoroughly the lesson that before "making the dirt fly" it must get ready, not merely for the physical performance of digging, but for making its force reasonably contented. It is not yet on the way to an adequate supply of labor, however, and we shall naturally look for a steady increase of inducements until the point of equilibrium is reached. The desired young men would not come for the salaries alone, so we are offering them club-life, billiards, and athletic sports. If they still remain at home, there are yet cards to be played. Was not there talk recently at Panama of endowing a theatre? There should be no surer way of retaining the homesick American than by giving him at his far-away post comforts and luxuries which he could not command at home. A returned canal workman pining in his native town for the delights of Culebra would be an advertisement of inestimable value.

The Navy Department is apparently planning to make impossible another killing at Annapolis as the result of prizefighting. It is bad enough that what is forbidden by law in practically every State should go on openly on the decks of Federal warships, with officers sitting by and urging on the fighters. But that this senseless brutality should be permitted and encouraged at Annapolis is really scandalous. Only a couple of years ago the people of this country insisted on the stamping out of hazing at both Annapolis and West Point. It was duly suppressed, and so could fist-fights be. But, as is shown by the interviews in the *Herald* and other papers, naval officers believe in them as a means of makings boys manly—a belief widely held in the eighteenth century, but now generally discarded, certainly in all civilian institutions of learning. A prize-fight at Harvard or Yale or Princeton would be incredible; and no preparatory school could flourish which permitted such practices. Formerly flogging and the issuance of liquor and other practices were also considered necessary to make good men-of-war's men. These could not be restored now, but they are not more anachronistic. Secretary Bonaparte has ordered a court-martial for the survivor of the late contest.

The vote of the official representatives of fourteen Southern States in convention at Chattanooga on Friday in favor of a national quarantine comes less than a fortnight after the first day without a yellow fever case in New Orleans. The fact is that agitation for a national quarantine has invariably followed closely on outbreaks of imported disease and died away between times. If Congress met in the season of epidemics, it is quite probable that we should have had a national quarantine system many years ago. In truth, the way in which public confidence in the efficiency of the Federal Government's work has overbalanced such State-rights sentiments as still survived in Gov. Vardaman's address to the Chattanooga convention, has been very impressive. Of course, the time passed generations ago when the defence of our seaboard against disease could be regarded as in any sense a local matter. We have had a steadily increasing degree of coöperation between the various State boards of health, and a larger number of the stations at the various ports have been voluntarily turned over to the control of the Public Health and Marine Hospital Service. Thus the complete supplanting of the local jurisdiction now means much less practical change than it would have done a few year ago.

A "Theodore Roosevelt Professorship of American History and Institutions" in the University of Berlin would have seemed a marvel to Bancroft or Motley. Its founding by Mr. James Speyer, at a time when the tide of American students flowing to Germany is somewhat slackening, with the reciprocal appointment of German professors to lecture at Columbia and Harvard, witnesses a great change of conditions and a still greater change of sentiment. The step itself is not so important as what it signifies. In this matter, the universities, and even the Kaiser and the President, speak less for themselves than for their nations. Unless there were already a good understanding and a fruitful intercourse between the United States and Germany, this interchange of professors would be an empty and slightly comic formality. As it is, we may regard it as an outward sign of a quiet but steady rapprochement of two peoples.

A fall in New York bank reserves to less than 25 per cent. of outstanding deposit liabilities is so unusual that last Saturday's bank statement, showing a shortage of $2,428,000, excites attention. Under the national-bank act, a reserve of 25 per cent. in specie and legal tender money is stringently required; the law prescribing that when reserves of a city national bank's reserve are below that ratio, and until the ratio is restored, the institution "shall not increase its liabilities by making any new loans or discounts otherwise than by discounting or purchasing bills of exchange payable at sight." The purpose of that exception is, obviously, to leave with the bank the facilities for drawing on outside markets. It is clear that the law deems maintenance of such a ratio of reserves imperative. It goes so far, indeed, as to endow the Federal officers with the power to force the bank out

of business if it fails for thirty days to make good the deficiency. Conservative critics are unanimous in approving this requirement; it is, in fact, deemed much more essential to-day, when the banks are carrying as deposits nearly nine-tenths of the $187,000,000 reserves of the trust companies of this State, than it was before the rise of those institutions. The Bank of England, which similarly holds on deposit the reserves of the English joint-stock banks, regards a 40 per cent. cash reserve as the minimum of prudence.

Only on four occasions in the past fifteen years has such a deficiency occurred. In November, 1899, and November, 1890, the cause lay in sudden and heavy demands of Europe on our capital, in both instances because of a London money panic. On a third occasion, in July, 1893, it was panic at home and a run on bank reserves, that caused the deficiency. Neither circumstance existed in the fourth case referred to, that of September, 1902, and neither exists to-day. It is true, the European money markets have for various reasons shown their resources to be considerably strained this season, and the active trade at our own interior markets has caused the latter to draw very heavily on their New York credit balances. But the root of the trouble this year, as in the autumn of 1902, was that a stock speculation of enormous proportions was started by our millionaire "operators" in the very face of the coming money stringency. In both years, these speculative "pools" and "cliques" were warned by all bankers of judgment and experience, both publicly and privately, that they were trying a dangerous experiment. They paid no heed whatever to the warning, either in 1902, or in the present season. In 1902, the penalty inflicted, when bank reserves had fallen below the legal requirement, was withdrawal of loans which these adventurers had been using to "carry" their inflated stocks, and the consequent rout of the speculators. The resultant reduction of bank liabilities promptly restored equilibrium in the bank return. It remains to be seen how the banks will deal with the similar problem now confronting them.

The missionary aspect of the life-insurance business as delineated by President McCurdy of the Mutual continues to crop up in the legislative inquiry—most strikingly in the matter of industrial insurance, which must be probed more deeply by the committee. People who buy this form of insurance pay very high rates for it, partly, at least, because of the cost of collecting the small premiums. Solicitors go from house to house, gathering ten-cent pieces and quarter-dollars from housemaids and mechanics. From the point of view of the policyholder, this seems, on the face of it, a wasteful method of saving—if we may employ a contradiction in terms. When the 51 per cent. of lapses—certified to by Metropolitan officers—is reckoned in, the extravagance is yet more startling. No one can deny that though the Metropolitan itself is prosperous, its system, which lays such a burden on the poor, is now open to the gravest suspicion.

Mr. Chamberlain's speech at Birmingham, on November 3, was called by his admirers a "fighting" speech, but the enemies he was attacking were those of his own household. He turned savagely upon Lord Londonderry, a member of Mr. Balfour's Cabinet, and proceeded to read him, with Lord Hugh Cecil and all the Unionist free traders, out of the party. Then of the Prime Minister himself, and his conduct of the party and public business, Mr. Chamberlain said as damaging things as have been uttered by any Liberal. He spoke contemptuously of "timorous counsels" and "half-hearted convictions," and declared that the last session of Parliament had been "more humiliating to ourselves, to a great party, than I can recollect in the course of my political experience." Of the action of the Government in running away from motions against protection, he spoke as "a stain" upon the Conservative party—though, of course, it was a stain put there by Mr. Balfour's own direction. The Prime Minister might well exclaim: "Call you this backing of your friends? A plague upon such backing!" But even worse was to come, for Mr. Chamberlain declared for an early dissolution of Parliament, and affirmed that the longer Mr. Balfour delayed his appeal to the country, the worse he would be beaten. Throughout the speech, in fact, ran a tone of angry impatience and bitter defiance, the implication being that the speaker was in a great hurry to have his party defeated under his friend Balfour, and then turn to Chamberlain himself for a programme and a leader.

French Cabinets are so chronically in unstable equilibrium that the wonder always is, not that they fall, but that they survive. M. Rouvier had a narrow escape on Friday, and the extreme bitterness displayed in the Chamber might seem to make his retention of power improbable. Still, the wolves had the Minister of War, who has been very unpopular, thrown to them, and that may keep them quiet for a time. Moreover, Rouvier's appeal to the *bloc* to remain solid, lest the bill for the separation of Church and State fail, may have its effect. It is very like an embarrassed Republican appealing to dissenters to rally and save the sacred tariff. Rouvier, it is well known, has personally had no zeal in the movement to disestablish the Church. He simply inherited the separation bill from his fiercely doctrinaire predecessor, M. Combes, and has accepted it as one of the conditions of keeping his Government a going concern. The measure has passed the Chamber and is now under debate in the Senate. Grave doubts exist about its passing before the general elections of next year; but it may be held by Rouvier *in terrorem* over the heads of the various groups to which he has to look for support. The very fact, too, that there is soon to be a new Chamber and a new President of the Republic, should tend to still the clamor for a new Ministry, which would inevitably be short-lived. Yet there are evidently powerful influences at work against the present Prime Minister. Jaurès is leading off the Socialists, and Delcassé's many friends are watching for an opportunity to take revenge for his dismissal. And the dissatisfaction over Rouvier's surrender to Germany in the matter of the Morocco Conference, wise though it was, does not appear to abate with time.

Reports of the triumph of liberalism in Russia alternate with accounts of fiendish brutality. Autocracy and mediævalism die hard. The mutiny at Cronstadt confronted Witte when he was called upon to suppress riots and revolts in towns hundreds of miles apart. The announcement of his cabinet fails to evoke enthusiasm, either in the ranks of Liberals or in those of reactionaries. None of the members—among whom M. Shipoff, the Minister of Finance, who was associated with M. Witte, at Portsmouth, is most widely known outside Russia—has been prominently identified with the Zemstvoists or Moderate Liberals, who are the steadying influence at the present day. But Count Witte, like others of the few great men who have reorganized a state out of chaos, may be his own ministry. It is not to be expected that the radical element will be easily appeased, while the formation of an Upper Chamber, one-half of whose members are to be appointed by the Czar, will not allay the skepticism of even those moderate Liberals who have hailed with delight the final dismissal of Gen. Trepoff. The most hopeful sign of the dawn of a new era in Russia is the report that Prince Obolensky, the successor of Pobyedonostzeff, has appealed to the priests to stop the slaughter of the Jews. Of all the measures proposed, whether in this country or abroad, to put an end to the unspeakable atrocities that have wrung the heart of mankind, none will be so efficacious as a mandate by the head of the Orthodox Church.

THE REFERENDUM VOTES.

Though the Poe disfranchising amendment which so signally failed in Maryland on election day, attracted the attention of the whole country, it was not the only important referendum vote in the States. In Rhode Island a proposal to reapportion representation in the lower house of the Legislature was beaten; in Ohio an amendment to the State Constitution, providing for biennial elections, was endorsed by both parties and passed; and Chicago was given what amounts to a new charter by the confirmation at the polls of the action of the Legislature at Springfield last winter. An unofficial vote in Indian Territory showed that the sentiment in favor of Statehood separate from Oklahoma was weaker than was supposed. The seven amendments, good, bad, and indifferent, submitted to the New York voters were passed, but the vote was light, as it was in Ohio, where the referendum was hardly more than a formality.

The constitutional amendment proposed by the Republicans of Rhode Island was an apparent concession to the popular demand for a revision of a system of representation that is outworn and unfair. It provided for an increase of membership in the House of Representatives to one hundred, and enlarged the Providence delegation from 12 to 25. But it did not touch the State Senate, which is the real ruling body in Rhode Island; nor did it propose to invest the Governor with the veto or to do anything to make that official more than a mere figurehead. As the active opponents of the measure were quick to point out, it proposed to give additional representation to but one-seventeenth of the population, where gerrymandering could most easily be employed to clinch Republican rule. Some 17,000 votes were recorded in favor of even this insincere attempt to revise the antiquated Constitution; but this was only a little more than a thousand in excess of the votes against it, while a three-fifths vote was necessary. The Republicans now lament the fact that revision will be delayed "for two or three years at least," but Dr. Garvin was right in urging the voters to insist upon a real reform measure.

Little interest was excited by the amendment submitted to the Ohio voters. It was in line with the action already taken by a number of other States like Iowa and Indiana, where it has been decided that an election once in every two years is enough. Heretofore certain State and county officials have been chosen in odd-numbered years, and others in the even-numbered years. By the new provision, all State elections will be held in the even-numbered years, and only municipal elections will occur in the odd years. Gov. Pattison's term will extend through three years instead of the usual two, in order that the next choice may be made in 1908. Another amendment provided for the exemption from taxation of municipal, county, school, and township bonds.

Chicago's "little ballot" contained a number of important matters for the voters to pass upon. These included an extension of the Mayor's term from two to four years, a change that has been adopted throughout Indiana and in a number of our chief cities, including New York, Philadelphia, and Kansas City. The City Council was given the power to fix the price of gas and electricity—a power that has been sought for years. The old system of police magistrates and justices of the peace—the inadequate "justice shops"—was voted out of existence, and a municipal court organization substituted, the change to be made on December 1, 1906. Another proposition was to create outside the limits of the settled city a series of "forest preserves," or natural park areas, in anticipation of the growth of population. It was generally supposed that this undertaking would be approved without difficulty, but the vote was so light that it may have failed on the ground that it did not receive a majority of the votes cast at the election. The figures were 87,000 in favor of it and 58,000 against, while for the office of the president of the sanitary district some 186,000 ballots were cast. It will be necessary to take the matter to the courts for settlement. The habitual indifference of voters toward abstract propositions which involve no element of personal gain to individuals or party leaders, was illustrated in the meagre attention paid to this excellent amendment in Chicago, as compared to the big poll on Gorman's pet measure in Maryland and the Aldrich-Brayton pretence in Rhode Island.

The vote on the plan to put the control of the price of gas and electricity in the hands of the city was regarded by Chicago as an advance of the municipal-ownership propaganda, and the favoring vote was larger on that account than it would have been without such a tag. On the other hand, a proposal to build a municipal lighting plant in Toledo, where a "disciple" of the late "Golden Rule" Jones was elected Mayor, failed to secure the necessary two-thirds vote. Buffalo likewise ignored its opportunity to "throttle" a lighting monopoly and authorize the erection of a municipal electric-light and power plant. In that city only 9,641 votes were cast on the proposition, though it should be said that a favorable verdict would not have been mandatory on the city. That the city-ownership idea has spread widely was shown by the result of the mayoralty election in Terre Haute, Ind., where a local Dunne defeated the present conservative Republican incumbent. Other Indiana cities rebuked the "wide-open" policies of their administrations by putting in mayors pledged to carry out Gov. Hanly's law-and-order policy. In Maryland and Rhode Island the verdict was sound, and in Ohio and Chicago popular assent was readily given to propositions already threshed out and approved by the voters.

THE NEW YORK CITY VOTE ANALYZED.

As Mr. Jerome's victory was the most remarkable feature of the late election, his vote is the first to be considered in an examination of the returns. The independent candidate for District Attorney received a total of 123,980 votes. The ante-election curiosity as to the source of his probable plurality may now be easily gratified by noting how far his opponents ran behind their respective tickets. Flammer, who should not in reason have had any votes at all, polled 51,069 less than Mr. Ivins, this difference constituting the largest element in the Jerome vote. Shearn had 49,478 less votes than Mr. Hearst, and Osborne 33,253 less than Mr. McClellan. It thus appears that Ivins and Hearst adherents contributed about equally to Mr. Jerome's success, while Tammany votes went to him in much smaller proportion. The gap of 9,820 between Mr. Jerome's actual vote and the combined deficiencies of his opponents as compared with their respective Mayoralty candidates, shows that there must have been an average of some nine voters to an election district who either threw away their votes for District Attorney or marked their ballots improperly. This accords with our information that in a few districts there were as many as twenty ballots intended for Jerome, but marked in two circles. In passing, it may be noted, moreover, that almost a third of the discrepancy—2,885, to be exact—is accounted for in Abraham Gruber's district, the Twenty-first.

It is certain, in any case, that more than 40 per cent. of the voters in these three parties successfully split their tickets and had them counted—an achievement which we believe to be without parallel in any State with a ballot resembling New York's. That conditions were not uniform is shown by the strange combinations of city and county candidates favored in the various Assembly districts. Thus, of the districts carried by Osborne, 16 went for McClellan and 4 for Hearst; of Jerome's districts, 7 were carried by McClellan, 5 for Hearst, and 1 for Ivins; while Shearn's two pluralities were naturally in Hearst districts.

In view of the contingency on which Mr. Ivins's predictions of success were based—namely, that if he retained his full party vote, he would be elected—it is interesting to note that both Mr. Hearst

and Mr. McClellan polled a vote larger than the entire Republican enrolment. Mr. Ivins fell 83,731 behind it, and the returns show that this falling off was in a general way uniform throughout the city. There was not a single district in which Ivins's total was equal to the number of voters who had officially declared themselves to be Republicans in 1904. In the district with largest Republican enrolment, the Eighteenth Brooklyn, with 9,244, he got but 6,779; in that with smallest enrolment, the Third Queens, with 453, he polled but 324. But it was different in McClellan's case. Taking the entire city, the numerical difference between his vote and the Democratic enrolment was larger than that in the case of his Republican opponent, being 91,940. Yet in seven districts he polled a vote larger than the enrolment.

Everywhere else in the city, Hearst manifestly drew votes away from both the other parties. The seven where the Tammany enrolled vote was untouched deserve, therefore, a little further notice. The districts in question are the Fourth, Sixth, Eighth, Tenth, Fourteenth, Sixteenth, and Twenty-seventh of Manhattan. Their respective Tammany leaders are Ahearn, T. P. Sullivan, F. S. Sullivan, Harburger, Oakley, Keenan, and Martin. Let us take the figures for the group as a whole in comparison with those for Manhattan and for the entire city:

	Republican.		Democrats.	
	Enrolment.	Vote.	Enrolment.	Vote.
Specified districts	10,405	6,682	17,662	20,399
Manhattan and Bronx	103,139	64,354	183,025	140,978
City	221,849	138,118	321,083	229,083

The excess of McClellan's vote over the Democratic enrolment in these seven districts alone accounts for 352 more than his plurality. It is to be noted, further, that McClellan's gain over his party's enrolled vote, 3,737, is almost exactly equal to Ivins's losses from his, which were 3,723. So it seems to have been a unique condition of things that prevailed in these districts. Hearst was strong enough to carry three of them—the Eighth, Tenth, and Sixteenth—yet he did this without cutting at all into the Tammany vote, and the Tammany candidate meanwhile had received all the Republican defections bodily. It is true that the voters who did not enroll as members of any party, 22,428 in number, were more than enough to account for the Hearst vote. The total vote, moreover, is no nearer the registration figures than for the city as a whole. Yet, in our opinion, the figures, as they stand square neither with common sense nor with the observed developments of Hearst's campaign in the districts concerned. Here is a field for investigation at the start.

In connection with the Assembly and Aldermanic candidates we notice the same divisions of districts as in connection with the District Attorneyship. Mr. Hearst carried eleven Assembly districts in Manhattan and the Bronx, but only two of his Assembly candidates were successful, while, though Mr. Ivins carried but a solitary district, sixteen, or nearly half, of the Republican Assemblymen were elected. Substantially the same thing is true regarding the aldermanic candidates. The choice of a Board of Aldermen with a clear Republican majority at the same time as a Tammany Board of Estimate is about as remarkable an outcome as the choice of an independently nominated District Attorney.

OUR IMPOSSIBLE BALLOT.

If the election did nothing else, it supplied unanswerable arguments for repealing without further delay the existing ballot law of this State. Mr. Jerome, it is true, was successful in spite of the obstacles put in his way by our clumsy and exasperating system of voting. His triumph, as a candidate independently nominated on a party-column ballot of this type, is surely unexampled. But the very figures that tell his story reveal the almost grotesque defects of the ballot law. How, for instance, are Flammer's 13,000 votes to be accounted for? He did not ask them for himself, the party organization did not ask them for him. Even a Republican bent on "knifing" Jerome should have preferred to vote for Osborne or Shearn. It is an irreducible minimum of crazy voting, and its cause is a ballot law the peculiar function of which is to scare every voter possible into voting a straight ticket, with reason or without reason.

Again, there were undoubtedly cast and put aside many hundreds, if not thousands, of ballots on which voters had placed crosses in both the Jerome circle and the Republican, Tammany, or Municipal Ownership circle. There is no question as to the intent of the citizens who cast them, yet the decision of the courts on the nice point of their legality may conceivably reverse the result of the election. That a campaign canard issued on the eve of election should be able to influence votes is bad enough, but that it should be possible by the mere issue of an illegally marked sample ballot to deceive voters who know their preferences into throwing away their suffrage, is unspeakably worse. That there should be any element of truth in the cry, "Vote straight: it is the only way to get your ballot counted," is itself the deepest reproach.

For weeks before the election, newspapers have to be turned into primers of information how to vote. It takes a long paragraph merely to outline the two modes permitted for voting a split ticket; and independent organizations, unless they present a full ticket against the machines, must perforce give as much of their attention to elucidating the mysteries of the ballot law as to winning friends for the candidate. Arguments *why* he should be voted for are almost swamped in explanations *how* he can be voted for. The spectacle of educated New Yorkers annually learning how to vote is quite as absurd as Congressman Mudd's ante-election schools, where Maryland negroes were laboriously taught to pick out the "ox-yokes" in the name of "Sydney."

If all this were in any way unavoidable, we might put up with it philosophically enough. But it is not necessary. Ballots of simple and understandable form are in regular use, not only in Massachusetts, with her educational qualification, but in States where manhood suffrage obtains. There is undoubtedly some force in the argument that the ballot as used in Massachusetts—the "pure Australian" type—is not perfectly suited to the needs of a community which permits its citizens to vote before they can read and write. The experience of Maryland, for example, shows the results of imposing on an ignorant electorate a ballot designed for an unusually qualified voting population. Haphazard voting is no less an evil than hidebound voting. But there are many ways of surmounting the difficulty. The essential point is: *the straight-ticket circle must go.* Even if the ballot were left unchanged except in this particular, it would be a great step forward. Then everybody, whether he voted a straight or a split ticket, would have to make as many marks as there were offices to be filled; but the illiterate or the blind partisan has the column arrangement as a guide to his pencil. Just such a law in Montana generates an amount of independent voting that very few other States can equal. It is said that four-fifths of the ballots in that State are "split."

For a combination of practical and intelligent features, however, we have never seen anything better than the bill drawn here in 1901 and introduced in the Legislature of that year by Senator Elsberg. That bill retained the party emblem on a small scale as a concession to those whose political convictions are dependent on a picture gallery. It embodied at the same time the separate coupon for each office, so that a man who had made a mistake in one office did not necessarily lose his vote for all other offices thereby; and, finally, substituted the rubber stamp for the marking pencil, thus eliminating at a stroke all the complex questions arising out of the "marked for identification" clause.

There never will be a better time than the present to conduct an agitation on behalf of a ballot which shall be framed in the interest of the people and not in behalf of the bosses and machines. Unfortunately, the politicians recognize

the opportunities which the party-column ballot gives them, and they cannot be induced to consent to alteration until they realize that public sentiment demands it. But just as the so-called Australian ballot was forced upon the politicians, a better one can also be secured from the Legislature. Gov. Higgins's readinesss for a change is an encouraging sign. Mr. Ivins is already enlisted for the fight, and the Executive Committee of the Citizens' Union has voted to prepare at once a petition to the Legislature, asking the repeal of the ballot law, and the adoption of the Massachusetts system. Its ballot-reform committee is to work in conjunction with other organizations, and is to obtain as many signatures as possible before the Legislature meets. Moreover, the press of the city is awake to the need of the hour. The *Times* has called for "an intelligible ballot." The *Globe* declares that it is now time to rearrange the Australian ballot—originally fixed to suit the politicians—"to suit the people." The *World* feels that the fact that, in electing Jerome, "popular intelligence prevailed over the badness of the law, is all the more reason for its prompt radical amendment." The *Press* speaks of our "imbecile ballot." The *Sun* declares that the law as it now stands is "a constant invitation to error and fraud."

In the agitation which is now certain it must first of all be made plain that the existing ballot is wrongly termed Australian. The ballot actually in use in Australia was not adopted here, but *adapted*, and to its detriment. It was, moreover, introduced in this State by means of a cumbersome law, which by 1896 contained no less than one hundred and sixty-seven sections. Two years later the Court of Appeals declared that it had found some of these sections "quite difficult to understand," and yet it felt that, to be really qualified, the voter ought to know and understand every one of them. This high tribunal then went on to state that, in its opinion, the dangers to free government from the law were so great as to "*demand* the attention of the Legislature." But that attention has never been given. Complaining delegations at Albany have had the scantiest attention accorded them. The Legislature has been too busy with a thousand other matters to waste any time upon reconstructing this dangerous statute.

What the Appellate Division said in 1898 sounds almost like a warning against the situation existing in this city to-day. It was: "If an election were close and the action of the district canvassers throughout a large territory were to be brought in review before the courts, we are entirely clear that the judicial machinery would *break down* by the weight and number of the issues to be decided." In this Mayoralty case, one of the very first questions the courts will have to pass upon is whether a cross in the circle over Jerome's name invalidates the ballot. Hundreds of votes, as we have said, were so marked, instead of with a cross in front of Jerome's name. What possible excuse is there for a ballot which makes such errors possible? Yet this is perhaps the simplest question to come before the judges. It must not be forgotten that the first persons to pass upon the difficult points about which the Court of Appeals complained are not jurists, but election officers, who are, in the eyes of the law, merely administrative officials.

A THÉÂTRE DE LUXE.

It seems to be settled beyond all reasonable doubt that within the next two or three years New York will have one of the finest theatres on one of the finest sites in the world. The ground has been secured, the plans prepared, and the necessary millions subscribed, not only for erecting the building, but for endowing it so as to render the management independent of the box-office receipts. Moreover, this princely temple is to be under the direct patronage of some of our wealthiest citizens, who will fill it with the effulgence of the opera or the horse-show; is to open its doors at reasonable rates to all meaner mortals; and is to be devoted to the representation, in the best possible manner, of all that is highest and typical in all forms of the drama, ancient and modern, foreign or domestic. And this interesting proclamation, promising the speedy fulfilment of hopes which the most sanguine believer in the future of the play-house scarcely dared to dream of as possibilities of the remote future, is made at a moment when the theatrical outlook is darker than it was at the beginning of the Irving period, when the race of real actors is nearly extinct, and all living writers of high repute have abandoned dramatic composition.

On its face, this prospectus is almost dazzling in its brightness, but the vital question is whether it can be made good. It would be foolish and presumptuous to answer with a decided negative, but the difficulties to be surmounted are enormous. They will be best appreciated by those who have most closely studied the history of the theatre. Money may make the man—that faith is at least as old as Pindar—but it is powerless, by itself, to recreate, although it may foster, an art. How does the case stand? We all know the current managerial plea, based upon the rankest of fallacies, that the present degradation of the stage is due to the low public taste and the financial necessity of gratifying it. The millionaire theatre, of course, will not feel the weight of that sordid incubus. Although it expects the crowd to contribute to its expenses, its policy need not be affected by the failure of one play or of a dozen. So long as it cares nothing about profit, it may remain open and make new productions, indefinitely. But if that were its sole object—the provision of a gorgeous, fashionable, and popular place of entertainment, without direct reference to gain—there would be nothing about it to demand present discussion. It would differ only in degree, not in kind, from many of our existing theatres. Decadent as it is, our stage cannot be charged with lack of variety. At this hour it is giving us samples of American, English, French, Belgian, German, and Russian drama. Shakspere, Clyde Fitch, Maeterlinck, Oscar Wilde, and Bernard Shaw are represented, not to speak of others less famous or notorious. Variety is not necessarily the spice of theatrical life.

The only declaration that gives the semblance of real importance, from the serious or artistic point of view, to the rather over-confident proclamation of the National or Universal Theatre—perhaps the final appellation may be a trifle more modest—is that of its educational intent. If the gentlemen who have pledged their negligible fortunes for boxes in the exclusive circle, cherish a passion for the restoration of the theatre to its proper place among the arts, realize what that aspiration means, and will interest themselves personally and actively in the pursuit of it—then, and only then, they may achieve substantial results. If they rely merely upon the magic of the check-book, and delegate all executive responsibility to salaried subordinates, they will meet with humiliating failure.

It is granted at once that they have done well in selecting Mr. Conried as their managing director. The creator of the Irving Place Theatre has demonstrated the catholicity of his taste, his skill as a stage manager, and his wide acquaintance with the comprehensive range of the drama, as known to the German stage. But Mr. Conried, in the past, has confined himself, in the main, to the production of plays which have already proved successes; and it may reasonably be doubted whether he, or any one man, is capable of bearing the additional burthen which it is now proposed to put upon him. Herein lies the most obvious and disconcerting weakness of the new programme. Its intimation that money is all-potent is discouraging enough, but the apparent disregard or ignorance of the vital preliminaries to any real theatrical reform excites the gravest mistrust.

One might suppose that the ideal theatre is to spring, fully equipped, from a plethoric pocketbook, that good new plays are to be had for the asking, and that capable actors of all standard

pieces, comic or tragic, are to be picked up at every corner. As a matter of fact, it would be impossible to construct a good stock company out of existing materials except after years of arduous training, under expert direction. Very little heed has been given, apparently, to this fundamental obstacle. But, for the sake of argument, let it be supposed that the ideal company has been found, and that it is equal to every emergency. What will then have been secured beyond the establishment of one theatre in which good performances may be expected? What advance will have been made toward a general revivification of theatrical art? One capable company will, no doubt, have the force of good example. It may slowly do for the elevation of dramatic taste what the Metropolitan Opera has done for musical. But we really need many such companies, and they must be in active competition if they are to make progress. The idea of the National Theatre promoters, that actors, safe from outside rivalry and assured of a permanent competence, will exhibit a more rapid artistic development than their less fortunate fellows, is contrary to all human experience—and assured of a large and permanent income the actors of the new theatre must be, or there will soon be an end of the stock company.

On the whole, the new scheme is, we fear, more magnificent than practical. That the two-million-dollar house will give distinction to its neighborhood and satisfaction to its patrons, may be regarded as certain; that it may offer some notable representations, is by no means improbable; but that it will immediately and directly raise the national standard of drama, or hasten the looked-for revival, only the most sanguine of enthusiasts will believe.

THE BRITISH ASSOCIATION IN SOUTH AFRICA.—I.

HARVARD UNIVERSITY,
November 4, 1905.

On August 15, 1905, there were gathered in Cape Town about four hundred over-sea members, with a strong supplement of South African members, of the British Association for the Advancement of Science at the opening of its seventy-fifth meeting. The Association has met outside of the British Isles on only two other occasions—at Montreal in 1884, and at Toronto in 1897. The visit to South Africa this summer was, however, a much more exceptional affair than a mere transatlantic jaunt; indeed, it was the largest scientific excursion ever carried successfully through a long-distance itinerary. Three vessels of the Union-Castle line brought detachments of the party from England, the voyages varying from seventeen to twenty-three days of fair weather. The over-sea membership was of four classes. There was the "official party," of about one hundred and seventy, including the general and sectional officers of the Association and a number of representative scientists selected by the Council from the eleven sections, from Astronomy to Education; for all these there were liberal reductions of steamship fares, free railway transportation over long distances, and much private hospitality, as well as a generous subvention towards expenses from funds that had been placed at the disposal of the Association by the colonial Governments in order to ensure a strong attendance. Then there were foreign guests to the number of sixteen from Europe and America, invited by the Council from nominations made by the sectional committees. These *fortunati* were practically on a par with the official party where they were not given even greater facilities and privileges: among them may be named Engler, botanist, and Luschan, ethnologist, of Berlin; Penck, geographer, of Vienna; Backlund, astronomer, of Pulkova; and Cordier, Orientalist, of Paris; and among the five Americans, Scott, palæontologist, of Princeton; Brown, mathematician, of Haverford; Carhart, physicist, of Michigan; and Campbell, botanist, of Stanford. Third came the non-official party, for whom the concessions as to travelling expenses were less generous, but who, as far as the meetings and receptions were concerned, stood on an equality with every one else. Fourth were the wives, sons, daughters, and relatives of members, who were in sufficient number to give the excursion the appearance of a large family party. To all these should be added the colonial members, who, however, as it seemed to me, usually stood aside to let the procession pass.

Although this peripatetic meeting was smaller than its predecessors at home, it was attended by a good proportion of representative men, from the president, Prof. George Darwin of Cambridge, to the many sectional officers and speakers; and the South Africans may consider that they had a good sample of a scientific gathering in the various presidential addresses, sectional meetings and evening lectures, to say nothing of the personal conferences between home and colonial members, from which profit flowed both ways. Darwin's presidential address was given in two parts, one at Cape Town, the other at Johannesburg; it treated molecular and stellar physics in a style that must have conveyed a somewhat severe impression of popular science to the large audiences by which the halls were crowded on both occasions, but this was alleviated by the lighter vein of his frequent informal remarks—as, for example, at Pietermaritzburg, when he repeated the story of a dispute reported by a lady's maid: "The butler says as 'ow we're hall descended from Darwin, but the cook says we hain't, and they can't agree"; and at Durban, where he told how his father, when the *Beagle* touched on the Natal coast seventy years before, wished to leave the vessel and go overland to the Cape, an adventurous plan that was defeated by an off-shore breeze which turned the vessel away. "So my presence here," said the distinguished son of the famous naturalist, "may in all probability be laid to a puff of wind."

Among the various sectional addresses, mention may be made of those on "University Education and National Life," by Sir Richard Jebb, the distinguished classical professor and M. P. of Cambridge, who described himself as "a sort of Rhodes scholar from the other end," and advocated a broad-minded conception of university culture, in which the narrower views of Matthew Arnold as to the sufficiency of literature were amplified by the more philosophic views of Henry Sidgwick as to the value of scientific training; by Professor Haddon of Cambridge, anthropologist and explorer, on the native tribes of South Africa, their subdivisions and characteristics, their invasions and migrations, and particularly on the need of careful study and record of native customs before they are too much affected by European influences; by Sir Colin Scott Moncrieff, army engineer in India for over twenty years, and in charge of irrigation in Egypt under the British administration, describing the systems of irrigation in various parts of the world—a subject very pertinent to the needs of the South African colonies at present; by Admiral Sir William Wharton (whose death afterwards at Cape Town was the tragedy of the whole excursion), on geographical progress, especially in oceanography, in which appropriate reference was made to the ancient circumnavigation of Africa, as recorded by Herodotus, who faithfully reported that the explorers said they saw the sun pass over the sky on their right hand, as they sailed westward around the southern end of the land, but added that he couldn't believe such a story; by Professor Miers of Oxford, on recent researches in the physico-chemistry of solutions and alloys, in their bearing on the conditions under which ancient salt deposits and crystalline rocks were formed.

The evening lectures were equally suggestive. Sir William Crookes, the eminent chemist of London, described at Kimberley the various theories of the origin of diamonds, with brilliant illustrations by means of elaborate apparatus brought all the way from home, but with a stronger leaning to the origin of the Kimberley diamond "pipes" by meteoric impact than was acceptable to some of his geological listeners. Professor Poulton, zoölogist of Oxford, presented at Cape Town an account of Burchard's African explorations of a century ago, and had the good fortune to find afterwards, through the aid of one of his audience, some of Burchard's original diaries preserved in Cape Colony and hitherto unpublished. Professor Boys, physicist of London, exhibited in Cape Town many experiments concerned with the properties of liquids. Farrar, the young geologist of the recent British Antarctic expedition, told an audience at Durban of his journeys over the far southern plateaus of ice and snow. Professor Arnold, metallurgist of Sheffield, explained at Johannesburg the structure of "Steel as an Igneous Rock" according to modern researches; and so on. It was the abundance of this sort of thing that gave some warrant to the superlative terms in which the over-sea members were greeted by colonial and municipal officers in the flattering addresses of welcome by which the Association was met at every stop on its long inland journey.

As to sectional meetings, there was much good material, to judge by the published programmes, but nothing that calls for report here in competition with the innumerable novel experiences in the Colonies that we traversed. Indeed, it was often hard to secure a worthy audience for papers of real merit, so distracting were the opportunities

afforded by local excursions in almost every line of scientific interest. Geographers and geologists, zoölogists and botanists, in particular, found it difficult to remain indoors during the few days that we had in a region of such exceptional interest as the Cape Town district; while, at Johannesburg and Kimberley, engineers and chemists, economists and anthropologists were also continually tempted away from the formal sessions. For this reason the incidents of the itinerary may here take the place of further account of the meetings.

There were, of course, garden parties and receptions everywhere. Those given at Cape Town by his Excellency, Sir Healy Hutchinson, Governor of the Colony, by Sir David Gill, Cape astronomer, and by his Worship, the Mayor, were the first of a series that had no end till we left the continent on the return voyage. The University of the Cape of Good Hope signalized its appreciation of our visit by holding a special congregation to confer a number of honorary degrees—a dignified ceremony, which took place in the large assembly-room of the new and spacious Town Hall, in one part or another of which nearly all the meetings of the Association were held. The opening address by the President of Convocation explained with graceful modesty that it was not so much for the purpose of conferring distinction upon the recipients of the degrees as for acquiring distinction for the young university that the guests were invited to allow their names to be added to its list of alumni. Some of the new doctors were evidently chosen with regard to international considerations; thus, representatives of Russia, France, Germany, Holland, Denmark, Austria, and Sweden were ranged on one side of the platform, as if to indicate the diverse languages and interests of Continental Europe, while the force that makes for unity in the possession of a common tongue brought together on the other side representatives of Cape Colony, Canada, and the United States to fill out the line that began with British scientists like Darwin and Crookes, and with British philologists like Jebb and Murray.

The five days at Cape Town were all too short for a satisfying view of the many features thereabouts. Of Table Mountain, with its heavy cap of sandstone, unconformably overlying a floor of older rocks, too much in praise cannot be said: its superb escarpment is the northern end of a north-south range, lying at the southwestern corner of southern Africa—once an island, now tied to the continent by a low, sandy belt on the east, like Gibraltar on a larger scale. Heavy surf thrashes the exposed western base of the range; Table Bay and Cape Town harbor are imperfectly protected from westerly gales north of the sand belt, while Simonstown, with a better harbor, on the east of the range south of the sand belt, has been chosen as a naval station and has large works in progress. There are charming suburban villages around the northern base of the range, where many of us were quartered, half an hour or more by rail from Cape Town, and so agreeably that we were loath to move on to our next meeting-place.

The main party left Cape Town on August 18 or 19, some by steamers, some by overland train, for Durban, the chief port of Natal. Many entertaining distractions were provided during brief stops there and at Pietermaritzburg, the capital, including views of sugar plantations, native dances, and so on. Some amusement was felt when it was learned that at the latter city, noted among its neighbors for a certain soporific quietude, Colonel Bruce, expert on tropical diseases, was to give an evening lecture on "sleeping sickness." The trip through Natal included stops at Ladysmith and other battlefields, for those historically inclined, after which the party made its way in several special trains up the strong slope by which the inner highland rises from the Indian Ocean, passing around Majuba Hill of unhappy memory on the edge of the chief escarpment, and so across the Veld, or open high country (often written Veldt by the English, as if to preserve its sound, and still better transliterated Felt) to Johannesburg in the Transvaal.

A feature of Natal is the large number of turban-wearing (East) Indians profitably engaged in the smaller industries. They make good house servants, they are largely employed by the railways, many of them are market gardeners on small holdings, and they are said to be displacing Europeans in the way of small shop-keeping. The point of all this is, that they work more steadily and intelligently than the Kaffirs, and live on a lower scale than the whites. Many of them have come from India as five-year contract laborers, but the Indian Government insists that at the end of this time they may settle permanently in South Africa, and be free to take up any work that they like. They may become citizens of the colonies, and acquire the right to vote; but suffrage for Africans and Indians is so restricted in Natal that practically none of them exercise it. In Cape Colony a larger number of non-Europeans are qualified voters, but their representation in the Assembly is so restricted that it can never reach a majority. In both of these self-governing colonies, white domination is an undisputed principle by the race now in power.

With several others who were geologically minded, I replaced the Natal détour by an excursion in the Karroo district, the inner dry part of the east-west ranges and valleys which must be crossed before reaching the plateau country farther north. The clear nights brought freezing weather, and the days were fresh enough for winter clothing. Here Mr. Rogers, geologist of the Cape Colony, was in charge, and gave us a fine opportunity of seeing a typical series of South African formations. The most remarkable of these was certainly the Dwyka, which we saw at various widely separated points—a heavy bed of unstratified material, probably of Permian date, containing numerous striated pebbles and boulders of various kinds, and lying, at most of the points where its base is seen, on a striated *moutonnée* surface, and hence unquestionably of glacial origin. It extends over something like 200,000 square miles, and, wonderful to relate, the movement of the ice sheet which formed it was southerly, from the region of the equator toward the region of the pole. It is important to note that, apparently contemporaneous with the Dwyka in South Africa, there was extensive glacial action in India and Australia. To say that geologists are puzzled thereby is to put the matter very mildly.

From Rogers's party in the Karroo, three of us, Penck of Vienna, Coleman of Toronto, and myself, made a hurried run northeastward, and joined another excursion led by Anderson, geologist of Natal, and Molengraaff, formerly geologist of the Transvaal. This was in the Vrijheid district, transferred from the Transvaal to Natal at the close of the Boer war, and here we saw something of rural Boer life, as well as of geological problems. The few Boers whom we met impressed us as men of strong character and good intelligence; and we gained the impression here and elsewhere that, while they were not altogether happy in the present situation, yet they accepted it in good faith, and worked with good will toward the future. They did not appear to harbor bad feeling against the British as such, although there were abundant signs of political antagonism between the scattered farmers and the concentrated mine owners; but there were not words enough to express the contempt felt for the National Scouts, or Boers enlisted under the British flag in the latter part of the war. We saw something of the Zulus on this occasion, looked into a kraal (village of stick and straw huts), and heard much from the colonists as to the necessity of maintaining white supremacy—a subject on which men of a rougher nature expressed themselves violently, but on which those of finer fibre spoke with much feeling of responsibility, and with perception of the difficulty of the problems ahead and of the need of well-tempered justice in attempting to solve them. Nearly every one, except the missionaries themselves, described the Christianized natives as less honest than the unconverted, and we thus gained the impression that the missionaries had gone too far and too fast. The natives taught in Jesuit schools were less criticised.

There was a stop of four days at Johannesburg, during which we were distributed among local hosts all along the Rand or low ridge formed by the outcrop of the sandstones that enclose the gold-bearing Banket or puddingstone. This allowed a resumption of sectional meetings, which were held in the temporary buildings of the new Technical Institute; but, as already hinted, it was difficult to withstand the temptation of making special excursions with our many hosts, to see the mines and the surface works and the compounds for the 80,000 Kaffirs and the 50,000 Chinese, to say nothing of the official excursions every afternoon, and of the all-day trip for many of us to the marvellous Premier diamond mine (product, over £1,000,000 a year) beyond Pretoria. Here, as well as in all our other stopping-places, the comfort of many members was substantially increased by the hospitality of the clubs, whose houses were opened to us and much used, especially at the noon hours, when the luncheon tables were filled with lively groups, where oversea and local members had better opportunity of making acquaintance than in the meeting-rooms.

Johannesburg itself was immensely interesting from its extraordinary artificialness, a metropolis in a wilderness, with a bustling population of about 80,000 Europeans and as many natives—not counting the

Kaffirs and Chinese in the mining compounds; with many large buildings and fine shops, tramway service, and residential suburbs, all set down in a high and dry country, nearly 6,000 feet above the sea, bare of trees, scant of water, empty of people for miles and miles together—a country apparently fit for little more than cattle-raising, and now almost deprived of cattle by rinderpest and other diseases, unsuited for wheat farming because of the rust that comes with the summer rains, and without high mountains to supply perennial streams for irrigation; a city where the working population is recruited from India and China, as well as from the African colonies, and where many of the European and American population would seem to be held only by high salaries or high wages, ready to escape homeward as soon as possible—for who would make a permanent residence at this centre of dust in a region of dreariness, if the possibility of living in a more verdant and versatile country were open to him? (and yet this is, I fear, only the stranger's view); a city where the interest of every one centres in the mines, from which the monthly output is £1,700,000, and yet from which the profits to shareholders are said on the average to be small, where "Kaffirs Rising" as a headline in the morning papers suggests to the uninitiated outsider the need of getting a gun and joining the militia to suppress a native insurrection, but shows to the residents that their mining shares are advancing in price (and every one has some stock in the mines); a city so civilized that it would soon go naked and starve if supplies of all sorts were not received from thousands of miles over seas and lands, and yet so dependent on the mines that it will remain only as strange ruins when its population dwindles away after the Banket is worked out some thirty or fifty years hence, unless some unsuspected source of wealth is then discovered.

We all saw something of the mines: the offices managed by English and American engineers under the ownership of European capitalists; the surface works, with forges where whites and blacks are employed side by side in sharpening and tempering drills, and compressors where air is driven down to forced labor below ground under heavy pressure; the slanting underground works where the shallower part of the Banket is already exhausted, where the deeper parts are now honeycombed, and where the greatest "deeps" at which mining can be carried on profitably are prospected in advance by borings and shafts; the surface works, again, where the skips come rushing up from the shafts with their three-ton loads of Banket, the sorting-tables where men and boys pick out the barren rock, the crushers and the deafening stamp-mills where the paying rock is reduced to sand and slimes, the amalgamating tables and the cyanide tanks for the extraction of the gold, and the huge white heaps (the "Johannesburg Alps") where the waste is carried up on long endless rubber belts; and all this going on at high speed, to bring out the quickest possible return of invested capital, and thus to secure the greatest profit to European owners, whatever effect the exhaustion of the mines may have on the South African State.

The great question in Johannesburg today is the employment of Chinese labor. This question arose after the war, when the Kaffirs—the common name for all kinds of native laborers—elated with war-time wages, were slow to return to the lower terms that the mine owners thought enough: and when, moreover, the available natives did not seem numerous enough to supply the labor demanded in the mines as fast as work was resumed with the establishment of peace. In order promptly to secure sufficient cheaper labor, a bill was passed at the instance of the mine owners by the Legislative Council on February 10, 1904, signed by the King, and put into effect on May 19, allowing the importation of Chinese laborers for periods of three years to work in the mines alone. The bill contains numerous specifications and restrictions as to manner of recruiting in China, transportation to, reception in, and ultimate return from Durban, working days and holidays, wages, manner of payment, space in compounds, right of appeal to magistrates, permits for brief absence from the compounds, conditions under which families may be sent for, and under which any Chinaman may resign at any time and return home at his own expense, and particularly as to the kind of work he must *not* do in the Transvaal. If he so desires, reënlistment for a second three-year term is permitted, but this contingency has not yet been reached. A third enlistment is not allowed; the coolie must then be returned to China if he has not been taken back at the end of his first term. The mines and the miners are always open to governmental inspection. Nearly 50,000 Chinamen have been brought over under these conditions.

This is not slavery, as it is excitedly called in some of the English papers, nor anything like it. It is not so bad as signing on many a sailing vessel, where there is no inspection possible and where the rough tyranny of captain and mates cannot be escaped till the end of the voyage. It is not out of comparison with enlistment as a private soldier, except that there is no bright uniform. It is vastly better than the condition of many Italian laborers under railway contractors in the United States, where the work is hard, and where the manner of living is often dirty and wretched in the extreme. The compounds, in which the Kaffirs as well as the Chinese are kept, were regarded by all who saw them as large, well arranged and relatively clean. The Chinese compound that I visited had a large washroom, where the men could have a tub on coming up from work; a good kitchen where Chinese food was prepared by Chinese cooks; a smaller kitchen where the men could prepare their own food in their own way if they chose; plenty of hot water to be drawn, steaming, from a tap into individual teapots whenever wanted; abundant clear space among the buildings; and barracks clean to the eye and without offensive odor. We saw hundreds of the men coming up from the mine and wandering about the compound; good humor was their prevalent expression, and only a few looked sulky. There was abundant chance of escape for those so inclined, but there was much probability of arrest of any stray Chinaman without a permit; nevertheless, a number of them have run away from work, and of these the few who have become marauders, stealing and murdering among Kaffirs and Indians, have caused, naturally enough, a great commotion. They are the black sheep of an industrious flock.

This is not slavery; but whether the importation of thousands of Chinamen on contract labor will prove to be a wise economic act is a very different and very difficult question. It is a not unnatural result of the high-pressure methods prevalent on the Rand, where the Kaffir, unaccustomed to continuous labor, has not always been easily held to his task. It seems to me to serve and to be intended to serve chiefly as a device to keep down the scale of native wages, for it must not be forgotten that there are still almost twice as many Kaffirs as Chinamen at work in the mines about Johannesburg; and a recent report of the Native Labor Association declares: "It would be a most unfortunate conclusion for any one to arrive at that, because the mines have been obliged at great expense to add a few thousand Chinese to the working force, we intend to or think we can afford to dispense with the labor of the South African natives." The device of importation appears, however, to be more expensive than was expected, and less satisfactory as a remedy for real or imaginary evils; and in this respect Chinese labor has some likeness to the present British régime, which has proved more costly to the mine owners, who were essentially responsible for the Boer war, than the less elaborate government that it replaced. There is already a strong feeling in favor of a change from a crown colony, administered from London, to a self-governing colony, and of a replacement of "younger sons," sent out from England, by resident Afrikanders or Colonials as officials. W. M. Davis.

CHATEAUBRIAND IN AMERICA.

Paris, October 28, 1905.

There are very few documents relating to the early years of Chateaubriand. The most precious of all is the 'Mémoires d'Outre-Tombe.' The famous pages on the castle of Combourg, where he spent so many melancholy days, will never be forgotten; but these 'Mémoires' are in many parts a work of the imagination—it might almost be said a poem. Chateaubriand has sometimes been called the father of the Romantic school; he attached more importance to fine writing, to splendid images, than to the cold reality. He was so often thrown out of the beaten path that he became almost naturally sensational. M. Joseph Bédier, in his 'Chateaubriand en Amérique' ('Études Critiques,' 1904), has recently proved that Chateaubriand's account of his journey to America was in some particulars pure fiction. It was written long after the journey was made. New documents have lately been found on this subject.

Chateaubriand started in the month of April, 1791, for America in the same boat with certain priests of the Saint Sulpice order, who were sent by M. Emery to Baltimore on a mission to found the first Catholic seminary in the United States. The idea of this foundation had been suggested in London to M. Nagot, Director of the Seminary of Saint Sulpice in Paris, by

Mgr. Carroll, who was made Bishop in England on August 15, 1790. The idea had been approved in Rome, and, a few months after, M. Nagot left for America with three priests and five seminarists, two of whom were Americans, two English, and one French. The French seminarist's name was Édouard de Mondésir. He had already spent some years in Canada. He eventually returned to France, and in his old age wrote, at the request of a friend who was preparing a life of M. Emery, some recollections of his own life. His manuscript, which has never been printed, forms twelve volumes, and is now preserved in the Library of the Seminary of Saint Sulpice in Paris. Chateaubriand is often mentioned in these volumes, which form a valuable contribution to the religious history of the end of the eighteenth century and of the beginning of the nineteenth.

In the account given of the journey to America there is a list of the passengers, among them "the Viscount de Chateaubriand, who has made noise and a figure in the world and would like to make more, over and above what he will make even after his death."

"The young viscount, a knight of Malta, with a chivalrous head, having already read and observed much, did not know how to kill time on board. He assisted willingly, having nothing better to do, in our spiritual exercises, not in the *oraison* or in the *chapelet*, but generally in the pious reading which was done in common. We were reading then the 'Soul Rising to God' of the 'Christian Perfection' of Father Rodriguez. The ebullient Chateaubriand preferred reading aloud to listening in silence. It was often his turn. M. Nagot once observed to him that an ascetic book ought not to be read aloud in the tone of tragedy. He answered that he put his soul into everything."

"One day, Chateaubriand asked permission to address the sailors all good Bretons and good Catholics. The Superior allowed him. Then our new missionary, taking in his hand a great crucifix, made a speech to the crew, using such strong and burning phrases that, if there had been a Jew aboard, I doubt not that the sailors would have thrown him into the sea."

During a great tempest, Chateaubriand, saturated with the Greek authors, would have himself bound to the mast, like Ulysses in the Odyssey.

It is clear, from many passages of M. de Mondésir's Memoirs, that he did not take a very favorable view of Chateaubriand. He says openly: "In him, in his writings, and in his conduct, *sunt bona mixta malis.*" This was written long after the journey to America, long, even, after Chateaubriand had written his 'Genius of Christianity,' which was a great event as following the period of official atheism and of the Goddess of Reason. M. de Mondésir looked at this work too much with the eyes of the theologian. He says:

"The 'Genius of Christianity' was a good fortune at the time it appeared; it is nevertheless true that the champion of the good cause, while thinking he was doing well and daring to speak for the divinity of Jesus Christ, more than bordered on Socinianism. He will never be my doctor in theology, and I am, besides, determined not to take him for my master in philosophy, in morals, or in Christian policy."

It has always been the misfortune of Chateaubriand to find detractors among those who were his natural friends—among the Royalists and the Catholics, such, at least, as held strict Legitimist or Ultramontane views. His mind was too independent, and would not long accept regulation. It must be said, also, that his pride was extreme, and that he could not bear mediocrity.

All that is worth noting in M. de Mondésir's Memoirs pertaining to Chateaubriand relates to the journey to America. His judgment of the author of the 'Genius of Christianity' was inspired by passion and savors of injustice. The Abbé de Mondésir has no sympathy for Chateaubriand, who is too much imbued with liberalism. In a part of his Memoirs, speaking of a visit made by Chateaubriand to Lamennais, he says: "I blush and my heart sinks within me when I read in my paper that the author of the 'Genius of Christianity' pays a visit to this satanic writer. I am tempted to say: 'Vir duplex animo, inconstans est in omnibus viis suis.'"

Among young Chateaubriand's fellow-passengers to America, in company with the Sulpician priests, was a young Englishman named Tullow, newly converted. Chateaubriand found him again in London, in 1822. Tullow had not meanwhile become a priest; he remained in the world, and was married. Can we believe the Abbé de Mondésir when he says that Chateaubriand counted for something in Tullow's change of mind? It is quite true that, at the time of the journey, Chateaubriand was not much of a believer. He himself writes in his 'Mémoires d'Outre-Tombe': "From the zealous Christian I had been, I became an *esprit fort*—that is to say, an *esprit faible.* This change in my religious opinions was produced by the reading of philosophical works. I believed, in good faith, that a religious mind was paralyzed on one side, that there were some truths which could not penetrate it, superior as it might be." The germs of piety, however, remained in him; he tells us how, when the evening prayer-bell rang, he joined his prayers with those of his companions. On the return journey, in a storm: "One of the French sailors began the hymn to Notre Dame de Bon-Secours, which I learned in my infancy. I repeated it in sight of the coast of Brittany."

Chateaubriand was essentially a poet; though he wrote very few verses, his imagination was always at work. His infancy was spent in poetical places; the commotion of the Revolution put his mind in a state of perpetual agitation. We see him, in these years of the emigration and of the journey to America, like a star which by some accident has lost its way. When he started for America, he entertained plans for discovering the Northwest Passage from the Atlantic to the Pacific. He wrote to his friend, the Chevalier de Panat: "I am looking for something new; there is nothing to do here. What is the good of emigrating from France only? I emigrate from the world. I will die on the way or come back something more than when I started." Such a state of imagination could hardly be understood by the pious Sulpicians and by the Abbé de Mondésir. Chateaubriand's sensations and emotions in the United States found expression in 'Atala,' the first draught of which was brought back from America. We may laugh at some episodes of this novel, which made so much noise in its time; at the conception formed by Chateaubriand of the savages and of savage life. We must not forget that it was a sort of protest against the horrors which the Revolution had committed in the most civilized part of Europe; and we see in it the germ of the 'Genius of Christianity,' which was also a protest against the excesses of the Revolution, and was well understood as such by Napoleon, the signatory of the Concordat which reconciled the State to the Church.

I have before me interesting documents on another part of Chateaubriand's life. They relate to the years 1814-1816. The periods of the journey to America and of the first years of the Restoration are quite unconnected, but the inner man remains the same through life, and in many respects Chateaubriand appears the same when he was an exile, an *émigré*, and when the Restoration opened to him a splendid field for his political ambition.

In 1861 and 1862, M. Louis de Loménie published articles in which he answered many criticisms directed against the work and the character of Chateaubriand. His son Charles has just now published a letter, written by Montalembert to his father on the 20th of October, 1861:

"Do insist, I beg you, on all you have said already, but perhaps not enough, regarding M. de Chateaubriand's liberal view of Catholicism. He never invented the theory of the alliance of religion and liberty in our modern society. He did better: he gave us his example. The greatest genius of the nineteenth century was a Catholic and a liberal, and he was so with a will. He wrote: 'We will try to render liberty a Christian liberty, and we will succeed.' I am very impartial in what concerns him, for he never honored me with a word or a look; but I shall be eternally grateful to him, and, after a struggle of thirty years in order to do what he wished, I like to find in my memory the sovereign action on my young student's soul, not only of the 'Martyrs' and of the 'Itinerary,' but also and especially of his political writings and of his whole attitude."

M. Charles de Loménie has developed what is condensed in Montalembert's letter. His publication is, from an historical point of view, particularly interesting in what concerns the attitude of Chateaubriand during the first Restoration, the ministry of Fouché and Talleyrand, and the Hundred Days.

Correspondence.

THE ANGLO-JAPANESE TREATY.

To the Editor of The Nation:

Sir: Your manly and courteous response to my criticism of your remarks concerning the Anglo-Japanese treaty is such as one learns to expect from the *Nation.* But, at the risk of being considered churlish and hypercritical, I am impelled to express the opinion that your later conclusions in that regard, like your first ones, are not warranted by the letter of the treaty.

You still profess the belief that, under the provisions of the treaty, Japan might be drawn into a war, as an ally of Great Britain, upon a question that does not concern Eastern Asia or India. This opinion you base upon a provision of the treaty which calls for joint action of the high contracting parties in case of an unprovoked attack upon either by any other Power, "wherever arising." Thus, you hold that "if Germany were to go to war with England over the Moroccan question," it is not

certain that Japan "would not be drawn into a European war." But surely the clause referred to does not warrant this conclusion. The words are: "If by reason of unprovoked attack or aggressive action, wherever arising, on the part of any other Power or Powers, either contracting party should be involved in war *in defence of its territorial rights or special interests mentioned in the preamble*" (that is, in Eastern Asia or India), "the other contracting party will at once come to the assistance of its ally," etc.

Now, it seems to me to be of the clearest that, under this provision, neither one of the allies can call the other to its assistance except in defence of its rights or interests *in the territories named*, that is, Eastern Asia or India. It is true, the quarrel might "arise" elsewhere, in Morocco, for example; but the rights or interests of one of the contracting parties in those territories must be jeopardized before the other can be involved in the quarrel. I believe that it was to provide for such a contingency that the words "wherever arising" were inserted in the treaty. Certainly, they should not be read without the explanatory words which follow, and thus given a false interpretation.

Faithfully yours,

ARTHUR JOHNSTON.

SANTA ANA, CALIFORNIA, November 3, 1905.

BERI-BERI IN OYAMA'S ARMY.

TO THE EDITOR OF THE NATION:

SIR: My father, Prof. Simon Newcomb, has called my attention to an item in the *Nation* of October 26, in which a writer says my name was lately given by the *Nation* "as authority for the fact that from 70 to 84 per cent. of Oyama's army was affected by that most disabling disease, kakké, or beri-beri." I have not found the original statement, but, as quoted here, it is totally erroneous. I said in the *Century Magazine* for May last that, out of the men *sent back to Japan* from the Japanese army *on account of disease*, 70 to 84 per cent. had beriberi. The remaining 30 to 16 per cent. had other diseases. The difference between this and the impossible "fact" quoted above is too obvious for comment.—Yours truly,

ANITA NEWCOMB MCGEE, M.D.,
lately Supervisor of Nurses of Japanese Red Cross, by appointment of Minister of War.

WASHINGTON, November 8, 1905.

OUR CATHOLIC SCHOOL SYSTEM.

TO THE EDITOR OF THE NATION:

SIR: This morning I bought a copy of *La Vera Roma*, a daily paper devoted to the Roman Catholic interest, in order to read the list of the religious functions performed in Rome on All Saints' Day. But therein I found matter much more interesting than that relating to the exposition of relics and the singing of masses—I mean an editorial article entitled "School and Religion in America." The writer, after laying down the broad principle that the Church is so constituted by God's grace that she always acquires new strength in the face of indifference, persecution, and apostasy, continues as follows:

"Thus it has happened in North America, where the public schools, both primary and intermediate, as well as those of university standing, are almost entirely in the hands of Catholics, to the great profit of those peoples, but to the bitter grief of Protestants, Jews, and materialists, who are in favor of secular instruction. The gentlemen thus hostile to Catholicism have begun in their hireling newspapers (*giornali bottegai*) a fierce campaign against Catholic education, accusing it of being a permanent danger to America's free and republican political institutions."

The article closes with a summary of a triumphant refutation of such accusations, written by the Rev. Don Johon (John?) Mullany, and recently published in the *North American Review*.

We read much in the newspapers nowadays about "inspired articles." In this connection it would be interesting to inquire, first, whether this be an inspired article; and, secondly, if it is, whether this be a form of inspiration recognized by the Church.

X.

ROME, November 1, 1905.

MONTAIGNE BETRAYED.

TO THE EDITOR OF THE NATION:

SIR: Two pieces of writing about Montaigne have recently appeared; one, a volume by Professor Dowden; the other, a paper by the less well-known Mr. Charles Whibley. Professor Dowden's volume is the first of a series of biographies of French men of letters, and by the conditions of its existence he has been obliged to make it a copy rather than an original work. He follows easily in the steps of his predecessors, especially, with due acknowledgment, in those of M. Bonnefon (whose own work is a mere compilation). The volume, therefore, goes over ground rather wearily familiar to the student of Montaigne literature.

Mr. Whibley's essay is of a different character. It is one among several 'Literary Portraits,' and does not concern itself with the events of Montaigne's life, but with the quality of his thought. It is in part a skilfully arranged cento of Montaigne's expressions regarding many subjects, but the selection and the arrangement are more in proportion to Mr. Whibley's interest in these subjects than to the rank they held in Montaigne's own mind; and the same personal quality is observable in the rest of the pages. But this very fact gives some originality to this study; it has the merit of an individual point of view, and the point of view is a fairly just one, as is also that of Professor Dowden. Professor Dowden's tone is perhaps a little over-cool, Mr. Whibley's a little over-warm; but of that each reader must judge for himself.

A point about which each reader cannot judge for himself, and about which there can be no difference of judgment among those able to judge, is the surprising incompetence of both authors in the matter of translation. Surprising in every respect, not only as showing a lack of familiarity with the French language, but a lack of familiarity with the features of the mind they are portraying; which leads their ignorance to put into Montaigne's mouth expressions sometimes absolutely at variance with his thought, sometimes simply devoid of any meaning. In either case the disloyalty is so great that their readers should be informed of it. I have therefore drawn up and subjoin a list of some of their mistakes. I hardly think I have observed or noted all of them. I do not note unimportant or questionable errors, of which there are many, nor the frequent unconscious misrepresentations.

PROFESSOR DOWDEN.

P. 19. "[My father] forgetting the *gentle aspect* of his own house"—*le doux air; i. e.*, the pleasant atmosphere, the easy conditions.

P. 21. [Speaking of wearing an old cloak of his father's] " 'I seem,' he says, with an outbreak of manly tenderness, 'to wrap myself up in my father.' " This would appear to be taken, without acknowledgment, from Pater's 'Gaston de Latour.' Pater, also, strangely treats the passage as a quotation. There is no such expression—nothing at all like it—in the Essays.

P. 34. "Turnebus, true scholar and no pedant, did not dress simply, as a gentleman should"—"il n'avoit rien de pedantesque que le port de sa robe, et quelque façon externe qui pouvoit n'estre pas civilisée à la courtisane."

P. 41. [Describing the fate of Moneins] "Alarmed . . . by the accident of an ill omen—for his nose happened to bleed"—"il luy advint . . . de saigner du nez." "Saigner du nez" is, in a figurative sense, an idiomatic locution meaning "manquer de résolution," to have an attack of cowardice.

P. 61. "In the essay 'That we are not to judge of our *hour* till after Death' "—"de nostre *heur*"; *i. e.*, fortune.

P. 146. [Latin inscription] "long weary of the service of the Court and of public employments"—"of law courts" (*aulici*).

P. 150. [Speaking of his Library] "I enter it . . ."—"Je suis sur l'entrée"; *i. e.*, his tower was at the entrance of his courtyard.

P. 170. " 'Let people tell me what they will,' writes Montaigne, depreciating his own attainments in a way which commended them, 'I understand nothing of Greek.' " —"On m'en dira ce qu'on voudra" refers to Amyot's translation of Plutarch, not to Montaigne himself; "I *who* understand nothing of Greek" see (in the translation) this and that.

P. 306. In the part of the 'Voyages' written by Montaigne in Italian he says, Professor Dowden thinks, that "the peasants with lutes in their hands sang the pastoral songs of Ariosto." What he does say is that he was struck by seeing "quest contadini il liuto in mano e fin alle pastorelle [the shepherdesses] l'Ariosto in bocca." The above mistranslation is Waters's recent rendering, and it has already been accepted by another student of European literature. It is high time its circulation should be stopped, and that it should be recognized that Ariosto wrote no pastoral songs, and that Montaigne did not think he did.

MR. WHIBLEY.

P. 192. " 'I have no more made my book,' said he, 'than my book has made me; a book consubstantial to its author, of a fit occupation, a member of my life, not of an occupation and end, strange and foreign, as all other books.' " This is Florio's translation, and characteristically unintelligible. The original is difficult of translation, but not obscure. The difficulty lies in the French word "occupation," which is not in the least represented by the corresponding

English word. It is used by Montaigne here and elsewhere in somewhat the sense of our "business," or of the French "emploi," "exercice," travail," as may be seen by observing that it was frequently changed in the posthumous edition of the Essays to these words or others of similar meaning: "D'une occupation propre" may therefore be rendered, "of a special kind of business," or, more loosely, "of a peculiar tenor" (Cotton has it, "of a peculiar design"), or, even, "of a peculiar nature," and the whole sentence may be read: "a book of the same substance as its author, of a peculiar nature, a part of my very life, not with a nature and a purpose unlike, as [is the case with] all other books."

On the next page Mr. Whibley uses Florio again. "I control and taste myself."—"Contreroller" means here "to examine"; "gouster," "to taste in order *to pass judgment.*"

P. 197. "Guevara's 'Mirror of Princes'"—"L'Horloge des Princes."

P. 201. "He always drank five glasses of wine, no more and no less."—"En esté et en un repas appetissant [je ne bois] que trois fois precisement; mais . . . je coule, à un besoing, jusques à cinq."

P. 201. "It was a matter of conscience with him to eat flesh on fish days."—"Je fais conscience de manger de la viande le jour du poisson"; *i. e.*, it is *against* my conscience. Perhaps Mr. Whibley thought his phrase meant that, but it hardly would to most ears.

The same remark may apply to a sentence on page 199: "He was of a mean stature."—"Je suis d'une taille un peu au dessoubs de la moyenne," of a little less than medium height.

P. 217. Here we have Florio again (revised) and always unintelligible. "I do more willingly wind up a notable sentence that I may sew it upon me than unwind my thread to go fetch it."—"Je tors bien plus volontiers une belle sentence pour la coudre [a word constantly used figuratively by Montaigne] sur moy que je ne destors mon fil pour l'aller querir." "I am much more ready to twist a fine sentence in order to connect it with what I am saying than I am to untwist [to loosen] my thread [of thought; "fil" is frequently used by Montaigne in this complete sense] to go in search of it"—that is, in search of an illustration. All the rest of the long quotation of which this is a part is very clumsy.

If the books about Montaigne induced their readers to read Montaigne himself, what a satisfaction that would be! But it is only rarely that they recommend this course, and I fear their influence is often quite unconsciously in the opposite direction. GRACE NORTON.

CAMBRIDGE, MASS., November 10, 1905.

Notes.

McClure, Phillips & Co. will soon have ready 'Irish History and the Irish Movement,' by Goldwin Smith.

Shortly to be published by Macmillan Co. is 'Japan and the Far East,' by B. L. Putnam Weale; and, in the spring, Winston Spencer Churchill's biography of his father, the late Lord Randolph Churchill.

Welsh people in all parts of the world will be interested in a book called 'Welsh Religious Leaders in the Victorian Era,' which will be put out very shortly by James Nisbet (London). These leaders, seventeen in number, are representative of the five great religious denominations to which the Welsh mainly belong. Their life and work are discussed in each case by a coreligionist selected from among the ablest theologians in Wales. The book owes its origin to the Rev. Vyrnwy Morgan, who is already well known to his countrymen in the United States. He is also its editor, and one of its main contributors.

Among the taking reprints of the present season is Messrs. Longman's four-volume edition of William Morris's 'Earthly Paradise,' tastefully bound and clear of print, with a portrait of Morris at the front. Tennyson's 'Maud,' in a holiday dress, also comes to us from Dodd, Mead & Co., with illustrations by Margaret and Helen Maitland Armstrong. Those of the latter artist are full-page oval designs, with a little color wash, and are, if somewhat amateurish, pleasantly quaint; the others are black-and-white headpieces, and effectively ornamental. There is a not too obtrusive floreated green border to every page. There being no end to Shakspere, we greet without surprise a reissue of the Oxford Shakspere, edited, with a glossary, by W. J. Craig (H. Frowde). This handy single volume is one of the India paper series, and now a larger and more legible type has been employed, to the reader's great gain. It is simply marvellous that 1,350 fair pages can be so compressed. It is accompanied to our table by a plain, straightforward reissue of Lamb's 'Tales from Shakspere,' with sixteen illustrations, reduced from the Boydell plates if we do not mistake, and another of Grimm's Tales, with twenty-two illustrations by George Cruikshank—both popularizations of the Oxford Edition. The 767 pages of the Newnes-Scribner 'Miscellaneous Works of Oliver Goldsmith,' in green and gold, make but a finger's breadth, and are light for the pocket, in the manner of its charming companions. Very composite are the illustrations of Messrs. Appleton's fresh presentation of Kipling's 'The Seven Seas.' Some might have been made for the occasion, but here a Turner and there another old print is intercalated, and again a real photograph of an ocean liner. Being full-page and widely separated, they are not incongruous, and do not mar the attempt to adorn in addition to print, paper, and the green page border.

It may be said to be the rule that a good book, expensively issued at first, will sooner or later be redressed for the modest bookbuyer; if losing something, also gaining something. Mr. A. F. Pollard's able work on 'Henry VIII.' is an example. Three years ago, we noticed it at length in the sumptuous Goupil-Scribner edition. Now it comes to us with Messrs. Longman's imprint, a modest duodecimo of 470 pages in clear type, shorn of all its external glory, deprived of all the splendid portraits, save Holbein's chalk drawing of Henry, but containing the original substance, or the real thing. Moreover, Mr. Pollard has added reference to the non-contemporaneous writers to whom he was, in a small degree, indebted, and to the original sources as well. Text and notes, too, have undergone some revision. In fine, the cheaper edition may challenge the costlier on the scholarly plane.

It is perhaps a unique thing for a book mainly of technical criticism of the text of a Latin author to be honored by reprinting almost a generation after its first issue, and a full twenty years after its author's death. Such has been, however, the happy fate of the 'Criticisms and Elucidations of Catullus,' by the late Prof. H. A. J. Munro, of Cambridge University (London: Bell; New York: Macmillan). The new edition is substantially the same as the old. The only addition of note consists in the reprint of three brief articles contributed by Munro to the (English) *Journal of Philology* after the publication of his book. Even these the editor of the new edition (Mr. J. D. Duff) tries to keep concealed by distributing them in their proper local sequence through the pages of the book, and omitting specific reference to them in his preface. A comparison, page by page, of the two editions reveals them, however, on pages 143, 150, and 219. The first proposes to read *hilarate procitatis* in Catullus 63. 18; the second to substitute *uestis ubi* for *uestibuli*, in 64. 276; and the third, to read, in 107. 7f., *aut magis acuum Optandum hac uita ducere quis poterit.*

The little book on 'Roman Education,' by Prof. A. S. Wilkins (Cambridge, Eng., University Press; New York: Macmillan), turned out to be his last, for all classical scholars will have marked with regret that he died recently. It contains in six chapters and a hundred pages all that is really known upon this subject, and it is the best compendium which we have seen. Without having the appearance of being too learned—for its style is pleasant and the method of treatment makes the book easy to read—yet chapter and verse are given for all the important statements, and a list of authorities is prefixed for the benefit of those who would go deeper into the subject. We are glad to observe that Professor Wilkins puts Roman familiarity with Greek earlier than is commonly recognized, and that he brings out the important fact that the Romans were the first nation to base their culture on the study of literature in a foreign language; thus marking out the lines on which the higher education of all civilized nations was thereafter to move.

Edith Harwood's 'Notable Pictures in Florence' (E. P. Dutton & Co.) aims to help the uninitiated in art matters, and she proposes to follow it up by similar treatises on Roman and Venetian art. She recognizes the inability of the ordinary sightseer to dwell long enough on the pictures of old Italian masters to enter into their train of thought, and to understand their meaning, fraught as it is with their serious interpretation of life and religion. In her introduction she tells briefly of the evolution, in the thirteenth century, of the revival of art in Italy, in both architecture and sculpture, from the inspiration of Greek ideals; the first work of supreme artistic merit being the pulpit in the Baptistery in Pisa by Niccolò Pisano, whose possession of a Greek sarcophagus had awakened his enthusiasm for classic art, and induced him to found a new style. The impulse to effect a change from the prevalent Byzantine school of painting was, from the art of Pisano and his son, transmitted to Giotto, the first of the Italian painters to begin that great period which produced Masaccio, Donatello, Michelangelo, Titian,

and Leonardo. Miss Harwood arranges her artists alphabetically, giving us some account of their lives and their most important works, and telling where these are to be found, with small illustrations, good only for assistance in remembering the compositions. She includes the principal artists represented in the Belle Arti, the Uffizi, and the Pitti, along with the frescoes in the churches. The book is good to read, full of interesting historical detail, and ample in quotations from writers ancient and modern in prose and verse.

The 'Egypt, Burma, and British Malayasia' of W. E. Curtis (Fleming H. Revell Co.) follows so closely the lines of the same prolific writer's 'Modern India,' also published this year and reviewed in these columns two months ago, that any separate notice seems unnecessary. There is in the present book the same easy, confident, and confidential style of sketching and statisticizing (if the word may pass) that makes not unpleasant reading in Mr. Curtis's previous volume. One sees vividly everything he writes about. The few inaccuracies. the redundancy of superlatives, even the rather offensive tone of intimacy assumed with the reader, really do not matter. The subdued humor is thoroughly American: "Jiddah is of particular interest to us because it contains the tomb of our Mother Eve. I never heard before where she was buried, but it is a comfort to know." "There are forty-four species of snakes in Borneo, of which fourteen are venomous, and their bites are as conclusive as a projectile from a thirteen-inch gun." So the book goes on. To peruse it is like reading the inside sheets of a Sunday newspaper. It is all fit to print, and alternately didactic and amusing.

Messrs. Scribner have imported 'Golf Faults Illustrated,' by G. W. Beldam and J. H. Taylor. A careful inspection of the illustrations leads to the conclusion that golf instruction by means of photography has probably reached if not passed its limit of usefulness. There are two obvious objections to the present volume. First, that while Taylor's methods are altogether admirable for Taylor, they would not be likely to suit a man of entirely different build—different proportional length of arms, legs, etc.—and that accurate measurements on the stance mat are therefore valueless. Second, that the differences between the illustrations showing the right and wrong way of making strokes are in some cases so slight that the beginner is about as likely to remember the one as the other when the critical moment arrives. We would suggest as the next development a book of photographs of the different strokes, to be attached to the player's garments, and consulted before he addresses the ball —in other words, "Every man his own Taylor."

Dr. Arnim Graesel, author of the well-known 'Handbuch der Bibliothekslehre,' has prepared a popular 'Führer für Bibliotheksbenutzer,' containing various information as to the regulations in vogue in German libraries, the character of their catalogues, examples of classification schemes, etc. The comparative uniformity of administration in German libraries has made the preparation of such a guide an easier task than it would be in this country, where the diversity between the several types of libraries and between individual libraries, too, is much greater. The guide contains a list of common works of reference, which might have been more up to date.

The British Academy have just put out the first volume of their Proceedings. The first twenty pages are introductory, containing a "Brief Account of the Foundation of the Academy," the Charter of Incorporation, the lists of Fellows and Members of the Council, and the Addresses of the President, Lord Reay, at the "Annual General Meetings." The rest of the book is made up of the papers read before the society during the session of 1903-1904, and illustrating the various studies it is intended to promote. Under the head of philosophy come "Idealism and the Theory of Knowledge," by Dr. Edward Caird; "The Centenary of Kant's Death," by Mr. Shadworth H. Hodgson; "John Locke as a Factor in Modern Thought," by Mr. A. Campbell Frazer, and, we presume, Prof. Percy Gardner's summary of "Psychological Elements in Greek Sculpture." Law and history are represented by "Locke's Theory of the State," by Sir Frederick Pollock; by Sir Courtenay Ilbert's "Centenary of the French Civil Code"; by Baron de Bildt's "Conclave of Clement X.," and by Professor Rhŷs's "Irish Studies." With these must also be ranked "The Ferment in Education on the Continent and in America," by Mr. Michael Ernest Sadler, and Prof. W. M. Ramsay's summary of the "Excavations in Asia Minor." On the philological side we have Mr. F. G. Kenyon's paper on Greek Papyri, Mr. T. W. Rhys Davids's "Oriental Studies in England and Abroad," and Sir Richard Jebb's "Bacchylides," not to mention Mr. Arthur J. Evans's "Summary of the Pictographic and Linear Scripts of Minoan Crete and their Relations," and Mr. Israel Gollancz's Shakespeariana. We read on the back of the title-page that the single papers contained in the volume are issued in separate form, and can be had from the publisher (H. Frowde).

The centenary of Trafalgar has left its mark on the literature of 1905. Many books have been published about Nelson, mostly of a popular character, among which that of Mr. Newbolt deserves conspicuous mention. The Navy Records Society have also, in the 'Fighting Instructions from 1530 to 1816,' added to our store some valuable material on the tactical side of Trafalgar. Among the numerous articles appearing in the English press may be noted, as of special importance or readability, a series in the London *Times* on Trafalgar, an article in the *Athenæum* by Professor Laughton, and one in the *Publishers' Circular*, by its editor, Mr. Marston, who makes, and seemingly proves, the interesting point that Nelson was a faithful reader of at least one of Shakspere's plays. In it he found the perfect expression of his own character; his was the same heroic temper as that of Henry V. when he exclaimed:

> ". . . if it be a sin to covet honor,
> I am the most offending soul alive."

The parallel between Shakspere's hero and Nelson is certainly curious, and is on a line with the opinion expressed in our columns on the anniversary of Trafalgar, that "if Napoleon was modern, Nelson was Elizabethan."

Systematic efforts are being made for the propaganda of Buddhism in Germany. A Buddhistischer Missionsverein für Deutschland has been founded with headquarters in Leipzig, the object of which is to spread the Buddhistic philosophy of religion not only in the Fatherland, but also on the Continent in general. A monthly review is being published in the interest of this propaganda.

In former times the rectors of the universities of Russia were appointed by the Ministers of Education. Now the Government has given the faculties the right to make their own selection, and this has recently been done by all the universities without creating any disturbance. A prominent Leipzig journal, in this connection, expresses the hope that a change in the statutes of the Russian institutions may soon be effected, so that they will cease to be mere higher gymnasia, and become in reality schools of the grade they profess to be. In its Russian transformations even the old German University of Dorpat, now called "Yuryeff," is by the *Vedemosti* of St. Petersburg declared to be "a parody of a university."

"An absolute mental famine" is the strong phrase with which a Japanese describes the lack of good reading in his country. The library of Prof. Max Müller has been bought by Baron Iwasaki for the Tokio University, and it is now proposed to establish a great popular circulating and lending library there. An appeal to aid in this work has been made to the English people, signed, among others, by Mrs. Max Müller, the Master of the Temple, and the editor of the *Contemporary Review*. It truthfully states that never before was such an opportunity offered for influencing the thought of another nation, for, besides the 4,000 Japanese students at the University and the 400 students in the College for Foreign Languages, there are already more than 2,600 Chinese students in Japan, whilst large numbers of Japanese are continuing their studies to qualify themselves as instructors in China.

The industrial development of the natives of parts of West Africa is going on apace. The exports of cocoa from the Gold Coast have grown in ten years from less than 30,000 pounds in 1894 to 11,500,000 pounds last year, having a value of $1,000,000. A most interesting feature of the industry is that it is all the work of the natives themselves. For its still further development the Government proposes to build a railway from the coast to the cocoa district, and an engineer has been sent out to survey the route. Harbor works are also to be constructed at Accra, the terminus of the railway, consisting of a breakwater and jetty to enable lighters and steam launches to take the place of the dangerous surf boats now in use.

—It speaks well for the industry and enthusiasm of American scholarship that, in spite of the rare and inconsiderable opportunities enjoyed by workers on this side of the ocean for research among the great collections of public documents in Europe —collections to which scholars on the ground have daily access—there should nevertheless be recorded to our credit from time to time finds relating to figures of the first importance in the history of literature. Students of English literature, especially, will recall in this connection Dr. F. J. Mather's discovery some years ago (which was first announced in the columns of this journal) of the document in the Public Rec-

ord Office in London which fixed exactly the limits of Chaucer's first Italian journey. We take pleasure now in calling attention to another discovery of documents in the same great repository, which Mr. Charles William Wallace of the University of Nebraska has recently announced in the London *Standard* for October 18. This, though of less importance than Dr. Mather's in its bearing on the life and work of the particular writer, is in a sense even more startling, inasmuch as it offers something new concerning an author about whom the industry of research has long centred more perhaps than about any other in the literature of the world—namely, Shakspere. In the course of investigations with regard to the companies of boy-actors at Blackfriars and Whitefriars theatres from 1597 to the middle of the reign of James I., Mr. Wallace came upon three legal documents dated respectively April 26, May 5, and May 22, 1615, and relating to a suit in the Court of Chancery to which Shakspere was a party. The suit concerns certain properties within the precincts of Blackfriars, and Shakespere (or Shakespeare, for his name is spelt once each way in the text of these documents) figures as one of seven plaintiffs in the suit, among whom the person of highest rank is a Sir Thomas Bendish, baronet. The defendant is one Mathew Bacon, who, as sole executor of his mother Ann Bacon, deceased, is holding in his possession certain "deeds, charters, letters patent," etc., which were necessary to the titles of the various properties of the plaintiffs in Blackfriars. The plaintiffs assert, in their bill of complaint—which, by the way, surpasses in verbosity even the achievements of lawyers of more recent date—that the papers in question were left in trust with Ann Bacon "for and unto the use and behoofe of yor Oratores," and they accordingly petition that her executor be required to give them up. It does not appear how these papers came into Ann Bacon's hands in the first instance. Mr. Wallace has published *in extenso* in the above-mentioned number of the *Standard* the three documents he has discovered. They are respectively the Bill of Complaint, the defendant's Answer, and the decree of the Court, which last, it may be remarked, was in favor of Shakspere and his fellow-plaintiffs, so that it is to be supposed that the papers were duly turned over to them.

—Mr. Wallace's find thus puts us in possession of the records of a second suit in which Shakspere was engaged—the first, which has long been known, being that over the Stratford tithes in 1610. It is to be hoped that these interesting documents will be republished in the near future in some organ more generally accessible for reference than a London daily newspaper. One cannot but regret that the publication of Mr. Lambert's handy volume entitled 'Shakespeare Documents' could not by some accident have been delayed a year, so as to have included the new find, but we hope that another edition of that useful work may soon be called for. In conclusion, it will be of great interest to students of the Elizabethan drama to learn from Mr. Wallace's communication to the *Standard* that he has come upon a number of other documents, in the course of his researches, which "change the view of the early history of both Blackfriars and Whitefriars theatres, as also of the origin, career, and outcome of the children companies there, besides throwing light on certain authors and plays"; *Hamlet*, it seems, being included among the latter (that is, the famous passage in the Second Act concerning the boy-actors). These documents cannot fail to be of the very highest interest, and we trust that Mr. Wallace will not long defer increasing still further by their publication the obligations under which he has already laid all students of literature, through the addition of a new item to the biography of the world's greatest poet.

—Half of volume vii. of the Oxford English Dictionary (H. Frowde) is completed with the October issue (Pennage-Pfennig). The exotic initial P can here claim only one English word, Penny; but when the English occupied Britain they brought with them the word Pepper, already borrowed from the Latin. A later borrowing, through the French, of Peppered (for venereal infection) is now obsolete. Peppery is here first set down to Scott in 1826. Perfervid, after not ancient Latin, but Buchanan's, is quoted from Masson in 1856. The plural Peoples was avoided in sixteenth-century Bibles, and was looked at askance as late as 1830. Hence, perhaps, our own early writers on the Indian tribes spoke rather of "nations." But, across the Channel, "Peuples, voilà votre sainte alliance!" sang Béranger at the time of the Crimean War. Pert had from the fifteenth century the long vowel, and this has been retained dialectically and in the United States ("peart") along with the special sense of 'sharp,' 'adroit,' 'clever,' obsolete in England after the seventeenth century. Pesky, which may derive somehow from Pest as meaning 'plaguy,' began its literary course on this side the water, with Major Jack Downing in 1848. In the same year Thackeray brought out Penwiper. The Period, in punctuation, dates back to 1609; Pessimism (habit of mind or point of view) to 1815. That English verbal prodigality we so much prize was docked when Percase dropped out of the series Peradventure, Perchance, Perhaps (the latest of all). Etymological relationship is not as obvious as it is real between Penthouse and (say) Appendicitis. Attention should be called to Dr. Murray's historical exposition under Petition.

—The *Quarterly Journal of Economics* for November opens with a timely article by Prof. S. J. McLean of Stanford University on the English Railway Commission of 1888. That body differs from our Interstate Commerce Commission, but resembles it also. The organization in England is more strictly that of a court. Of the three members, one is a Superior Court judge, deputed to act as member of the commission for the time being. The decisions are final on questions of fact; and appeals, allowable on questions of law, are more in the nature of appeals in the regular course of adjudication. On the other hand, the activity of our Interstate Commerce Commission in conducting investigations and furthering publicity—probably the most useful part of its work—has no counterpart in England. Neither body has the rate-making power; each has to deal chiefly with the troublesome question of what constitutes "discrimination" and "relatively unreasonable rates." It is striking, however, that in England Professor McLean finds only one instance of a possible secret rebate or discrimination, and virtually no instances of the favors to individual shippers which are the worst of American railway evils. Noteworthy, also, is the immensely greater number of complaints brought before the English Board of Trade, whose jurisdiction is for conciliation only, but whose usefulness is none the less great. In England, as in this country, the expense of proceedings before the commission is heavy, and makes the remedy virtually unavailable for the ordinary shipper, unless some commercial organization acts for him. On these various matters Professor McLean's exhaustive account gives all needed information for those who have occasion to follow into its intricacies this phase of the railway problem.

—The October number of the *Library Journal* contains several papers on library conditions in the various Pacific States, discussed by Mr. W. L. Brewster of Portland, Mr. C. W. Smith of Seattle, and Mr. L. W. Ripley of Sacramento. Previous to the passing of the State Library law in 1901 there was no free public library in Oregon. There were school and college libraries, of course, and some subscription libraries; the most important of the latter being the Portland Library, with 35,000 volumes, which owned its own building and other property, valued at $267,000. Under the new law this was transformed into a free public library, while still retaining its character of a private corporation, and has been eminently successful. The history of public libraries in Washington is somewhat less meagre; the Public Library at Tacoma was established in 1890, that at Seattle in 1891, and that at Spokane in 1893. The Washington Library law was also passed in 1901, and under this act eleven public libraries have been organized. California, with its older culture, has naturally more and larger libraries than its two sister States. The oldest, the Sacramento Mercantile Library, was established in 1851, but it was not until 1878 that any general library law was passed; in 1901 this was "greatly amended and revised to bring it more in accordance with the results of experience in other States." The majority of California libraries are concentrated within a radius of fifty miles from San Francisco. "This propinquity has developed an atmosphere, a library spirit, perhaps even a generous rivalry, not only among library workers, but the communities themselves, with much resulting advantage to the libraries." The libraries within the charmed circle are described by Mr. M. G. Dodge of the Stanford University Library in a very interesting paper on "California as a Place of Residence for the Scholar." Besides the State Library at Sacramento, with its 125,000 volumes, the Library of the Mechanics' Institute in San Francisco, with 120,000, the Public Library in the same city with 150,000, the State University Library at Berkeley with 130,000, and that of the Leland Stanford Junior University, already approaching the 100,000 mark, are mentioned the unaccessible libraries of Mr. H. H. Bancroft, with 50,000 volumes relating to the history of the Northwest, and of the Sutro estate, with its 200,000 volumes, including "the best collection in America as to numbers and quality of books of the

fifteenth century." A fifth paper, by Prof. J. Schafer of the University of Oregon treats of the "Sources of Northwestern History." It is interesting to learn that the History Department of the University of Oregon is planning a coöperative bibliography of the history of the Northwest.

—The recent celebration of the seventieth birthday of the Norwegian historian, Ernst Sars, by a torchlight procession and a public banquet, attended by the Prime Minister and other leading members of the Government, the president of the national Legislature, the most prominent men in science, literature, and art, as well as in other walks of life, is interesting when viewed in relation to the mixed feelings with which the initiative of the Storthing was received by the same circles of society when, about thirty years ago, it placed the amount of a professor's salary at the disposal of the King and his Cabinet, provided they would appoint Mr. Sars a professor of history in the University. Sars early proclaimed himself a disciple of Comte, and it was widely felt that this "free-thinker's" holding a chair in the University meant the complete destruction of religion, morals, and all other conservative forces of society. Sars, in his writings (chief among which is his 'Synopsis of Norwegian History,' in four volumes), first among Norwegian historians attempted to demonstrate a continuity of development. While his predecessors were at a loss how to explain the apparent antithesis between the marvellous popular energy displayed during the early centuries and Norway's complete inability to maintain itself beside Denmark and Sweden in the following centuries, Sars finds an explanation in the original constitution of Norwegian society, with, on one hand, a very strong royal power, and, on the other, an independent pessantry, between which the originally existing aristocracy was weakened to such an extent that it was unable to uphold the power of the kingdom in the union with Denmark and Sweden at a time when national consciousness was chiefly manifested by the feudal aristocracy, while democracy was still in a dormant condition. But this same independent peasantry became the bulwark of the country's freedom when, under the Constitution of 1814, the people were again called upon to assume the reins of government. Sars's views, perhaps more than any other single agency, have contributed to the shaping of political thought and events in Norway, and to that movement towards complete independence the consummation of which we are now witnessing.

ANOTHER WAR MEMOIR.

A Southern Girl in '61: The War-Time Memories of a Confederate Senator's Daughter. By Mrs. D. Giraud Wright. Illustrated from contemporary portraits. Doubleday, Page & Co. 1905.

In more than a score of volumes Southern women have described their experiences during the civil war. Many of these volumes have qualities of rare excellence, as all readers of the recently published recollections of Mrs. Clay and of Mrs. Pryor will readily believe. Two diaries—Mrs. McGuire's 'Diary of a Southern Refugee' (which appeared nearly forty years ago), and Mrs. Chestnut's 'Diary from Dixie'—are by far the best of the score. Mrs. McGuire came close to producing a work of genius; and the least valuable volumes are well worth reading. Therefore honors are not easily to be won in this field.

Mrs. Wright's book would take high rank if its substance fully corresponded with its title and such chapter-headings as 'Childhood in Texas," "From Village to City Life," "The Makers of History," "The Feminine Spirit of the Confederacy," "Southern Belles and Southern Soldiers," "War-Time Correspondence," "The Winter of '62-'63," "The Fortune of War," "Suffering in the South," etc., etc. The author was but eighteen years old when the war ended. Her earliest years, devoid of important incidents, were spent in a commonplace Texas village. Then she passed a year or so in Austin, where her father, Lewis T. Wigfall, was State Senator. When he became United States Senator, in 1860, she accompanied the family to Washington; but she and a younger sister were soon placed in school near Boston. There they were when the war began—children of fourteen and nine years. A Baltimore friend of the family obtained passes so that they easily crossed from the Federal to the Confederate side of the Potomac at Point of Rocks, and joined their parents in Richmond when it was still jubilant over the battle of Bull Run. After spending several months in a Virginia village on the Occoquan River, where Wigfall commanded a Texas brigade until he entered the Confederate Senate, the girls were placed in a Richmond boarding-school. They remained there most of the time until the summer of 1864, when their parents made a journey to Texas, and they were left in the care of Mrs. Joe Johnston, then at Atlanta. Anticipating the fall of that place, they sought safety at Macon, whence fear of Sherman's march, a few months later, drove them to Greenville, South Carolina. From there they were taken to Richmond, where they remained until about a week before its evacuation. Then, with many others, they went to North Carolina, and, later, to the Southwest, as we shall see.

Recollections of such experiences, if full and vivid, would make a thrilling narrative. A girl sees only the surface of things, and what she does not understand she is not likely to remember, nearly half a century later. So the recollections are about what one should expect. They are pleasing, although often thin and so disjointed, either in themselves or on account of the letters scattered among them, that one often sees hardly more relation between the subject of the chapter and much of its contents than between the name of any city and the names of any fifty of its inhabitants. The reminiscences were suitable for a magazine, where some of them have appeared. Nevertheless, the volume will be dear to the hearts of many Southerners, both of the new generation and of the old, for it gives true echoes of war-time sentiment and "chivalry." And here and there are bits of description characteristic of the time or of the Southerners.

During most of the war Charlottesville, Va., was a very attractive and comparatively safe retreat. The university students had gone into the army, and their vacated rooms and many others were crowded by numerous wounded officers and soldiers, wives and daughters of men in the army, and the better class of refugees from nearly all parts of the Confederacy. It was therefore a social centre of great importance to the young, whose natural sociability seemed intensified by the war. The belles and disabled officers dispelled all sorrows by dances and picnics, but these did not quite satisfy. There must be a tournament; and let that tournament be over at Monticello, made sacred by Jefferson. It was difficult to obtain conveyances of any sort to take them the few miles. Some went in an old coach, the only vehicle obtainable, while others were

"mounted on sorry-looking nags; and though the riding habits were the worse for wear, rather nondescript costumes the rule, and the attendant cavaliers in a more or less disabled condition, yet we enjoyed ourselves. That the gallant colonel had lost his eye in his country's service made the unsightly black patch a badge of honor—and the old, ragged, faded jacket with the hole in it, showing where the minié ball had just missed the brave heart beneath it, invested the boy captain with added charm. . . . Some of the Knights—with only one arm to use—held the reins in their teeth and dashed valiantly at the rings with wooden sticks, improvised as spears for the occasion."

The descriptions of the hospital train—"filled with wounded, sick, and dying soldiers, in all imaginable stages of disease and suffering"—in which Atlanta was left, and of that roundabout flight by rail from Macon to Greenville via Columbia, are good of their kind. So little attention has been paid to the experiences of refugees and to the picturesque phases of life to be seen in the cars and at the railroad stations, that all such accounts are welcome. And the picture of the Wigfalls returning homeward is still better. After Joe Johnston's surrender, Wigfall hoped to get from Georgia, where he then was, to join Kirby Smith's army beyond the Mississippi. He shaved off his bushy beard and put on the clothes of a common soldier, so as to pass as "the bearer, private J. A. White, of Company M, First Regiment of Texas Volunteers, a paroled prisoner of the Army of Northern Virginia, [who] has permission to go to his home, and there to remain undisturbed. He obtained an ordinary emigrant wagon for his family, and with others he pretended to have fallen in with these "emigrants" going West.

"Of course we had no money; that is, what the outside world called by that name. We had thousands of dear old Confederate currency, in $100 and $500 bills (with Stonewall Jackson's head engraved in one corner, and the Confederate banner draped over Gen. Washington, on the Great Seal, with 'Deo Vindice' underneath it, on the other), but some kind friend had given us a large box of tobacco, which was as good as specie any time for *a trade*—so we went on our way . . . while my father tramped the weary miles on foot among the Texas boys."

The other class of material of which the book is composed is war-time letters—letters written by the author, her mother, father, and a brother in the army, and many letters to Senator Wigfall from prominent Confederates, such as Beauregard, Joe Johnston, Lee, Stephens, and Wade Hampton. The descriptions quoted above

are surely intended to be precise, but recollections are not the most reliable of "human documents." Two sentences from a letter written by Mrs. Joe Johnston shortly after her flight from Columbia, will suffice to show a much more valuable and interesting kind of evidence:

"What a sight it was to see the poor people [of Columbia] flying almost [too] terror-stricken to know what they could do—many leaving with only little bundles of clothes—and many compelled to remain, for they had nothing but God to look to for shelter. . . . The sight of this town [Charlotte] to-day is lamentable: women hunting in every direction for shelter—and the people themselves beginning to move off for a safer place."

Unfortunately, none of the Wigfalls, except the son, near the end of the war, displayed special talent as letter-writers. He was on Hood's staff during most of 1864. This position and the intimacy between the Wigfalls and the Johnstons helped him to be very impartial when Hood succeeded Johnston. After going to say goodby to Johnston he wrote:

"No one could ever have told from his countenance or manner that anything unusual had occurred. . . . An universal gloom seemed cast over the army, for they were entirely devoted to him. Gen. Hood, however, has all the qualities to attach men to him, and it was not a comparison between the two, but love for, and confidence in, Gen. Johnston. . . . He [Hood] has applied himself, however, with heart and soul to the task, and I sincerely trust will bring us out of the campaign with benefit to the country and honor to himself."

Elsewhere in the volume we are told that Johnston's bearing remained quite perfect—perhaps even when, a few days later, the pretty Mrs. Clay met him at church and kissed him in the most public manner, just to let Mr. Davis know what she thought of the removal!

The most important letters from any one person are six or eight from Gen. Johnston to Senator Wigfall, explaining, from time to time, between December, 1862, and July, 1864, the tribulations of his service in the Southwest. It has not heretofore been generally known that Wigfall—the most blustering, ill-tempered, and intemperate of the school of "fire-eaters"—was Johnston's official spokesman at Richmond long after he (Wigfall) had quarrelled with Davis. It would be unfair to Johnston not to add that their intimacy was a not unnatural result of their being chance messmates in Richmond in the summer of 1862, after Johnston was wounded at Seven Pines. Gen. Grant and others of a later period have taught the world not to be greatly surprised if soldiers and sailors are lacking in worldly wisdom.

Much less than one would expect is said about Wigfall, who, in 1861, was described by a keen and impartial foreign visitor as "a good type of the men whom the institutions of the country produce or throw off." The daughter tells us that, in his early manhood, before he left South Carolina, he had a duel with Preston Brooks, whom he shot through the hip, and by whom he was shot through both thighs. Their seconds later became governors of South Carolina. He fought several other duels, and "when asked for his opinion, [he] would state with an earnestness of conviction . . . that he was a firm believer in the *code duello* as a factor in the improvement of both morals and the manners of a community!" What pictorial illustrations of morals and manners were Wigfall and Brooks! Yet Wigfall made at least one very wise observation in the course of his stormy and inglorious career, and this deserves to be pinned to the unraised curtain, with the notice, "Historians, please copy." At one time there were doubts as to whether Senator R. M. T. Hunter of Virginia would join the Confederates. Wigfall said: "I don't know what we Southern men would do without Hunter; he is the only one among us who knows anything about finance!" He might later have added, with equal force: "Having Hunter, alas! we never discovered what to do with him."

CHILDREN'S BOOKS.—I.

Mrs. Burnett's 'Little Princess' (Scribners) is a friend so prized by young and old that she needs no word of recommendation. In the preface, the author tells how, when she was putting the original story into a play, there started into life a whole new set of persons and things. These in their turn were so well beloved of the child-public that the publishers asked for another story with more revealings of invisible ink. This Mrs. Burnett has now written. Banyan-like, another book has taken root, and, for aught we know, the pleasing process may go on *ad infinitum*, book and play alternating. If there is room for suggestion in so well established a scheme, it would be that in her next incarnation the charming princess might not say, "I've thought perhaps I might do something wicked . . . but I *couldn't* be vulgar"; that she might repress her cry, "How beautiful! Carlyle's 'French Revolution.' I have so wanted to read that!" and that, along with this excess of inward light, the glare of her diamond mines might be abated, her fortunes restored, by all means, but not restored tenfold, her riches squared to our proportioned strength. The illustrations in color by Ethel Franklin Betts are pretty and in the main illustrative. The book is in beautiful holiday dress, and we advise the fortunate children who become owners of copies to hide them from inevitably covetous parents.

Two other old friends, revived and newly dressed, are Miss Alcott's 'Under the Lilacs' and 'Jack and Jill' (Little, Brown & Co.), both illustrated prettily in black and white, the former by Alice Barber Stephens, the latter by Harriet Roosevelt Richards. The renascence of former acquaintances like these gives something to think of in relation to the then and now of children's books. There have been critics who, while delighting in the generally bracing atmosphere of Miss Alcott's books, have found somewhat to object to in the slang, the untidy English, and even more strongly in the amateur lovemaking. Upon the charge of slang it must be owned that wonder-working Time has had an effect. Whether because the slang of yesterday is often the usage of to-day, or because every succeeding period has bettered the instruction of the original villany—who shall say? An enormous amount of cruelty to children has been perpetrated in this way. Certainly the Alcott books read less offendingly than they once did in this respect. As to the lovemaking in them, it remains a distinct blot on girl and boy literature. Not that it ever monopolizes the scene or takes any but a natural turn. The plea that "things are so" is irrelevant. This, the crux of so much of the whole dispute in art matters, may well be waived for our children. They will not be hurt by exaggeration in what a modern writer calls "the hoary bugbear of retributive justice"; but a good many "things" that are "so" should be postponed to a later day. It is fair to say that 'Under the Lilacs' is an exception in this matter so far as the boys and girls go. But why need the leading lady read letters with a far-away look?

Another Jack and Jill claim attention in an attractive volume beautifully printed by Dodd, Mead & Co., and illustrated by Anna M. Upjohn ('Some Adventures of Jack and Jill'). This is a story of family life in Santa Cruz, told by a little resident girl of British lineage with Danish playmates, and neighbors of sundry races, both black and white. She gives a charming picture of island life, with its natural beauties and its many-sided human interests, and she is a very engaging little girl. The atmosphere of her own home is distinctly English, even to the persistent "like we do" of English writers. There is a bewilderingly delightful out-of-door life, its interests ranging from boys' clubs and lonely sea-beaches to hurricanes, quicksands, and the rescue of a black fugitive found trembling on Jill's own premises. The censor, if a purist, will find that narrative in the first person pays for its pretty advantage by here and there constraining the little heroine to an egoism no more pleasing in child literature than in novels. And the same censor would draw a line through the miniature heart affair of Jill and Feddy, a blameless episode of looks and lockets, yet a flaw. And this is, in most ways, a particularly good story, which one would like to see perfect.

'Kristy's Surprise Party,' by Olive Thorne Miller, with colored illustrations by Ethel N. Farnsworth (Houghton, Mifflin & Co.), is a collection of stories strung on a birthday. In one is a stirring picture of the adventure of a girl in the Chicago fire, another describes a Western blizzard and a young girl's rescue of a schoolmate. A good Indian story and sundry others of domestic adventure make a group well written, full of interest, and suited to middle youth.

In 'The Schoolhouse in the Woods,' by A. G. Plympton, illustrated from drawings by Clara E. Atwood (Little, Brown & Co.), there stands out strongly in evidence that odious person, the adult over the child's shoulder, with whom the author forever exchanges winks. As the narrative advances, however, the monster does not increase in size, and there is a respectable residuum of story concerning itself with a country school and with the friendship between a nice little Rosalie and a much persecuted colored child. The comic relief is mainly afforded by grown-ups and is oppressive; but there is a pleasant breath of wood-lore and of child nature, good and naughty, with, properly, at the last, a little popular triumph for black Sally. It is a book which would do best service in being read aloud by a judicious editor, who should cull the flowers and skip the thorns. If he be sufficiently adult, he may find amusement in hearing an old gentleman

who was a schoolboy in '56 using as his favorite word of reproach, "Varlet!" quite like a character in Scott or Shakspere.

'The Widow O'Callahan's Boys' are not new, only newly edited and printed, their gay new colored clothes furnished with skill and taste by Florence Scovil Shinn. The stanch widow and her seven sons are an admirable object-lesson in faithfulness to the claims of small things. Quite inimitable is Mrs. O'Callahan's Irish way of putting things, which furnishes the salt to the solid nutriment of the story. For a boy to begin by doing housework in an apron and culminate in the lofty post of a drygoods clerk has not an heroic sound, to be sure, but it becomes a sort of chivalrous adventure when it is done for a mother who leads each son to victory with a discriminating hand. "There's books of all sorts," she says, "but it's the history book that cures the consate." Of her most obstreperous son she observes: "It's not so much that he's iver for doin' what he can't, but he's awful set against doin' what he can."

From Little, Brown & Co., too, comes 'Shipwrecked in Greenland,' by Arthur R. Thompson, with photographic illustrations of great interest. There is just enough story to hold together the very entertaining chapters of adventure—"based in part upon the experiences of that unfortunate expedition which, on board the steamer *Miranda*, came to grief off the coast of Greenland in the summer of 1894." Manners and customs, flora and fauna, Eskimos and cameras, icebergs and polar bears make this a capital book for boys and boys' sisters.

An ideal combination of poet and artist has been made in the case of Robert Louis Stevenson's 'Child's Garden of Verses,' illustrated in black and white and in color by Jessie Willcox Smith (Scribners). This edition must take the nurseries of the mother country as well as our own by storm. The print is bold and clear, and set in generous margins, and the entrance is through a real gateway on the cover and a charming title-page of child and garden. The text drawings are commendable, but Miss Smith's strength lies in her palette, and the round dozen full-page plates are a sheer delight. There is even here, of course, a choice, and we mark our own preference for "In winter I get up at night," "My Shadow," "The Hayloft," "Northwest Passage," "Picture-books in Winter" (perhaps best of all), and the remarkably well-grouped composition at the close, "To Auntie." Happy the child that receives this book for a gift, as a source of instruction in taste both for poetry and for art.

An excellent little book for young musicians, young folk generally, and all others, is the 'Johann Sebastian Bach' of Ziemssen, translated by George P. Upton, and issued by A. C. McClurg & Co., Chicago, as one of the series called "Life Stories for Young People." Bach's was a career which, without forcing, lends itself to a pattern story, for it was a life made romantic by genius, and exemplary by the industry which never asked of genius a single concession. The story is well told, with commendable fidelity to fact, and the translation is exceedingly good.

'Stories from Wagner,' by J. Walker McSpadden (Thomas Y. Crowell & Co.), is another excellent little compilation for young students of music or myth. "Directed primarily to the needs of young people," it is worth the attention of older ones, as are all really good young books. The stories of all the Wagner operas are told without musical comment, but following fairly closely the acts and scenes in a connected whole. The language is straightforward, with frequent exact quotations to keep one in the current. Though abridged, naturally, each takes in all that is vital to the opera without getting into depths metaphysical or otherwise too exacting for the immature understanding. For the non-musical as legend and fairy-tale, for the young music lover who has still in anticipation the Wagner music drama, it is a capital little book. Kurwenal figures as "Kurneval," and Brangäne as "Brangeane" throughout the Tristan story; but these slips and a few intermeddling wills and shalls are the only discernible blemishes.

Mr. Joel Chandler Harris's "new stories of the old plantation," 'Told by Uncle Remus' (McClure, Phillips & Co.), shows the familiar vein unexhausted. There are many new and strange vocables, new "creeturs"—Mr. Cricket and Old Craney-Crow—and, above all, a new auditor, the "little-boy's" little boy. In fact, a full generation has been delighted by these animal narratives and now the second may properly appear upon the scene. Miss Sally's grandson is cleverly differentiated from his father, and becomes in Mr. Harris's hands almost a psychological study, delicately worked out. The consummate art of our folklorist is nowhere more manifest than in "Brother Fox follows the fashion." Three designers have been called in for the illustrations—which we opine is two too many.

Jungle Trails and Jungle People: Travel, Adventure and Observation in the Far East. By Caspar Whitney. Charles Scribner's Sons. 1905.

The jungle into which Mr. Whitney ventured is sufficiently unexplored to make valuable even the chance observations of a superficial investigator. India has been so "written up" from the venatic point of view that even statistics as to the Hindu death-rate due to snakes and panthers fail to charm; but the trials and disappointments of one who scours the trackless swamps of Sumatra, "Malay" (as our author calls it), and Siam are worth following when told in so sprightly a fashion as that of Mr. Whitney. If he had been less journalistic in style and the printer more careful, the reader's pleasure would have been increased. For the author, in his apparent effort to talk quickly and avoid tedium, gives the reader the tedium of unravelling many such a sentence as this, which even a journalist should hesitate to print: "[The awakening of beetle and general insect life] begins w' ' 6ne particularly loose-jointed, crackling beetle, followed by the creaking tree and the squeaking bush and ground insects." Other monstrosities are: "Of birds there were many and strange . . . birds of beautiful plumage and no voice, like one little canary kind of creature"; "strangely there should be," "this double-thorned, unholy thought breeder." We give these extracts as they appear in the book, where hyphens and commas fall at random; "butt" appears as "but," "a tiger on a snake" is to be understood as "or a snake," and the Foreword of the volume is printed Foreward. The author and printer may settle between themselves the responsibility for these latter slips, but we decline to recommend without reserve any book so stupidly Englished. One would almost think that it was the work of a German translating Greek.

On page 64 Mr. Whitney describes an interview with "one of royal blood and his wife" in Bangkok, and reports that the woman frankly expressed her disgust at the white teeth of foreigners. "Dogs and other four-footed animals," she declared, "have white teeth." So says Mandelslo in 1638: "During my stay at *Amadabath* some of the women there told me, that it was an ugly thing to have white Teeth, as Dogs and Monkeys have; and thence it came that they called us *Bondra*, that is, Apes." Other Observations (to follow the title) are fresher. The Malay (Sakai) jungle-men are credited with a belief in a "bad ghost" of the wind, whose messengers are lightning, thunder, and rainbows. The women make sacrifices of their children's hair "on occasions of fright." Like many other un-Christianized and uncivilized people, these Sakais are "honest in word and deed." The author's study of the Sakais is of great interest. They are as wild and timid as deer, roaming the northern section of Perak, aboriginal tree-dwellers, whose houses are built in forked trees, eight to twelve feet from the ground. The blowpipe, their only weapon, is six and one-half feet in length, having a bore of a quarter of an inch. With this gun they discharge a dart nine inches long, and "hit with precision and repeated accuracy small targets full sixty feet distant." The body of a dead Sakai is lashed to a tree together with blowgun and fishing tackle, after a sort of funeral dance or perambulation of the corpse on the part of moaning and wailing friends.

A good description of the durian, its peculiar effect on animals and man, its smell, taste, and general utility, is woven into the account of the Jelebu district. But in general there is more adventure than observation in Mr. Whitney's book, and as adventure it is very good reading, though only a hunter born could see any amusement in tracking deer and rhinos for weeks, to an accompaniment of leeches and mosquitoes, without finding anything to pay for the toil and discomfort. While in Sumatra, the author kept his eye constantly open for the argus pheasant, but had to be contented with finding one small feather. On another occasion he hunted *seladang* for weeks with only tracks to reward his energy. But he never loses his good temper, and perhaps describes the jungle better for his disappointment. At any rate, Mr. Whitney has given us a pleasing account of a region little known to the white man, and has added to his text photographic illustrations which are much clearer than some of the unfortunate English sentences that go with them.

Highways and Byways in Derbyshire. By J. B. Firth. The Macmillan Co. 1905.

Derbyshire lies out of the main route of the American tourist, who, if he goes there

at all, is usually content with a visit to Haddon Hall and Chatsworth; but few English counties contain so much wild and romantic scenery. For a county that lies within easy reach of Manchester and Sheffield, this is not an unmixed blessing, and Derbyshire has become the playground of the provincial tripper, whose cheap brakes and char-à-bancs are the curse of English country life. This is especially true of the Peak district. Before it became so terribly accessible, Ruskin wrote that

"it is the most educational of all the districts of beautiful landscape known to me. . . . Derbyshire is a lovely child's alphabet. . . . On its miniature cliffs a dark ivy leaf detaches itself as an object of importance; you distinguish with interest the species of mosses on the top; you count, like many falling diamonds, the magical drops of its petrifying wells; the cluster of violets in the shade is an Armida's garden to you—and the grace of it all!—and the suddenness of its enchanted changes, the terrorless grotesque! . . . It was a meadow a minute ago, now it is a cliff, and in an instant a cave—and here was a brooklet, and now it is a whisper underground.

Ruskin little thought that his words would one day be used as an advertisement by the railway companies who have turned the lovely Matlock Valley, the chief beauty of Derbyshire, into a tripper's paradise. The beautiful reach of the River Derwent has been lined with shops and cheap eating houses, and is continually noisy with the cries of the drivers of brakes and wagonettes. "At every step you are adjured to go and see some miraculous cavern, or dropping-well, or giant stalactite, each the greatest marvel and wonder of the Peak, and the catchpenny touting boards at last get upon the nerves." For the tripper's amusement a huge switchback railway has been erected on the river bank. One sees that the temptations to visit the wonders of the Peak are no longer what Ruskin found them.

Derbyshire, however, is happily a country which in certain districts has defied the enterprise of the railways, and is too remote for the cheap Saturday drives that nowadays consume the wages of the British artisan. It is a country practically inaccessible, or at least not to be thoroughly appreciated except by the pedestrian; and Mr. Firth, who walked through all its loveliest byways, convinces the reader that, though one must leave the highways to trippers and automobiles, a walking tour in Derbyshire will reveal quite as many undiscovered charms as the region whose now tarnished beauties inspired Ruskin's burst of eloquence. Not the least interesting route runs among the abandoned lead mines which were the county's chief source of wealth before it was found that Spanish lead could be imported at less cost. In the sixteenth and seventeenth centuries the miner must have been a menace even more intolerable than the modern tripper. Every man had a right to search for lead where he chose, irrespective of the damage to crops or pasture, with the proviso that, unless he found sufficient ore to pay a dish of lead to the King, he was liable for damage. But if he did find it, he was awarded a measure of the ground, and the unlucky landlord or tenant must look on while the miner made a complete mess of his property. The dish in which the lead, the best in Europe, was measured, is still preserved; it is made of brass, and holds fourteen pints. Now, hardly so much as a single dish is taken from the lead mines in a whole year. The main industry of the country has been diverted to the limestone quarries.

Derbyshire has not played a leading part in English history, but it is full of associations with Mary Queen of Scots, who, after she had been placed in the charge of the Earl of Shrewsbury, spent several years in one after another of his Derbyshire manors. She always complained that his castles were cold and draughty, and her sixty attendants found very poor quarters, and usually had to lodge in some neighboring town. First she was at Tutbury Castle, which she called a dungeon fit only for "base and abject criminals"; then at Wingfield Manor, now a beautiful ruin. It was there that Anthony Babington plotted for her rescue in 1586. Mary was often at Chatsworth, the older mansion, which in 1570 had just been completed, and there they now show Queen Mary's bower, a stone building below the house, close to the edge of the Derwent. Of the sixteenth-century Chatsworth built by Bess of Hardwick, Shrewsbury's ambitious countess, practically nothing remains. On the site of the old house where Hobbes the philosopher died, the fourth Earl of Devonshire began the present mansion in the seventeenth century, and it was not finished till the time of the sixth duke, who died in 1858. The most amusing object at Chatsworth is the bronze bust of this sixth duke perched on a Greek marble column which was brought from Athens. Round the base Lord Morpeth carved three stanzas in praise, first of Athens and then of the duke, whose stanch Whiggism was the admiration of his order. The incident reminds one of the degenerate Greeks under the Roman Empire, who used to knock off the heads of their ancient statues and replace them with the likeness of the Roman prætor who had been last appointed to govern them.

Near Castleton, the home of Peveril of the Peak, is a spot which in Italy or Greece would certainly have been described in an epic as the entrance to Hades:

"One begins by descending more than a hundred steps, and embarks on a boat to be ferried nearly half a mile along a subterranean stream into the heart of the mountain. This leads into an imposing cavern, where the stream plunges down with a roar into the 'Bottomless Pit,' and the roof is far out of sight. The pit is, as a matter of fact, about ninety feet deep, while the roof is estimated to be about four hundred feet high."

Not far off is another cavern, whose roof slopes to within two feet of the surface of the water, so that the visitor has to crouch in a boat which is pushed by a ferryman. Byron went through this gruesome experience in the company of Mary Chaworth, with whom he stayed at Matlock, a wretched spectator of the lovemaking of his favored rival, John Musters, whom Mary Chaworth married in defiance of her guardian, the Lord Chancellor.

Mr. Firth has a talent for description, and has collected, with the usual industry of the writers in this charming series, innumerable anecdotes connected with the famous Derbyshire families, the Mannerses, the Vernons, the Cavendishes, and the literary men who from time to time have made the county their home, Tom Moore and Johnson among the rest. The illustrations are by Miss Nelly Erichsen, and are well up to the standard of the series.

Rome as an Art City. By Albert Zacher. Charles Scribner's Sons. 1905.

The author of this little book frankly declares in a brief prologue that, owing to the extremely limited space allotted to him, he must approach his subject "in the character of a free lance." To be entirely modern, he should have rather likened his rapid survey of the history of Rome to a motor drive through the ages; we are, in his hands, whirled through each succeeding phase of art in the Eternal City down to the immediate present. It is surprising to find the amount of information he has got into this narrow space. So much has been written of all the great periods that it is only the chapters on "Rome as a School of Art" and that on "Contemporary Art" which might have been made interesting and useful, had they been more thorough.

The penultimate period in the history of Roman art Zacher places from 1700 to 1870. During the Pontificate of Clement XIII. Winckelmann came to Rome and through his writings turned the attention of Europe to classic art. Raphael Mengs the German and J. L. David the French painter, with Canova the sculptor, were then working in Rome during Goethe's memorable sojourn, which attracted among others the German painter Carstens and the Dane Thorwaldsen. Later on, in the early part of the nineteenth century, there was a distinguished group of German artists in Rome—Overbeck, Veit, and Schadow, Cornelius, Führich, Koch, and Schnorr von Carolsfeld, who revived fresco painting and followed classic ideals, recognizing only Raphael and Michelangelo as masters to be followed, and establishing the principle that religion and morality were the leading-strings of art. Nothing could be more detrimental to art than the patronage of the recent Popes. They encouraged the very worst taste in the decoration of churches; the Church of San Gioacchino in honor of Leo XIII. being a salient example of all that is undesirable, while the oleographs of saints and cardinals, commemorative banners, paper flowers, and bad pictures distributed about in churches, give no hope for ecclesiastical decoration.

Zacher takes a very lenient view of modern sculpture and of the recent public monuments. He sums up by declaring that although Rome produced but little good art, she absorbed all, and, like the phœnix, rises with renewed life from her ashes, representing to this restless age an oasis of peace by the memories of former greatness and the marvellous beauty of her surrounding country and atmosphere. We deduce that Rome is not a favorable centre for artists in our day.

The Latin Poets: An Anthology. By Nathan Haskell Dole. Crowell & Co. 1905.

Mr. Haskell Dole here presents selected translations in verse from some of the best things written by Romans from Plautus to Lucan. As far as the originals are concerned, the selections are excellently made, but the versions are very uneven, and had to be. So many of the poets have not been translated for a century, and of so many others the stringencies of copyright law

prevent the anthologist from culling the fairest where he will. What a pity it is that Plautus should have to be represented in a book like this by Thornton, and Terence by Colman! Both of these Englishmen, though they reproduced the Latin comedians fairly enough for the appreciation of the eighteenth century, are by the very nature of the style of that age wholly debarred from giving a reader of to-day any truthful idea of what these two writers were to their own generations. In fact, it is probable that a truthful version could not to-day be made except in prose, so greatly has taste altered and patience waned. Yet, as Mr. Dole remarks, some of the old translations of other authors are still effective, and we are glad to give a fresh welcome to Heywood's sixteenth-century Seneca's Tragedies and to the Ovid and Lucan of Ben Jonson and Marlowe. For Virgil Mr. Doyle gives by way of "deadly parallel" the ideas held by two moderns about hexameters in English: Lord Justice-Bowen's version of the fifth Æneid in rhymed pairs of verses, and the sixth book in Mr. Hoge Bullard's more recent attempt without rhyme. Of course neither contains true dactylic hexameters in the Latin sense, and they illustrate once more the jerky three-eighths time which has always characterized extensive attempts to render Greek or Latin epics into the same metre in English. By far the best representation of the movement and the variety of Latin hexameters that appears in this volume is the selection from the opening of the second book of Lucretius, by Calverley.

On the whole, Horace and Catullus come off best in this Anthology, probably because Mr. Dole has wisely selected versions by so many different hands in the case of each poet. Enterprise is shown in obtaining the right to publish Mr. Ball's wretched verse and therefore faithful translation of Seneca's take-off on the laudatory poetry of his day. We wish that the same enterprise could have given us something from the recent version of Tibullus by Mr. Williams.

TWO NOTABLE BOOKS ON RUSSIA

The Critic says "Of all the works on Russia recently published none is so striking as **Alexander Ular's RUSSIA FROM WITHIN** ($1.75 net, by mail $1.87), . . . clearly and forcefully written . . . the author knows his Russia." No book could give a clearer idea of the causes of the present troubles in Russia.

The Nation says that **WALLACE'S RUSSIA, New Edition** ($5.00 retail), is "invaluable, nay indispensable," while the London Times declares it is ". . . in the same class as Mr. Bryce's 'American Commonwealth,' and in some respects a greater achievement."

Tibet and Turkestan

By OSCAR TERRY CROSBY,

Late First Lieutenant, Corps of Engineers, U. S. A.

Mr. Crosby's deeply interesting volume is the record of the joys and perils of travels in hidden lands. He presents a careful statement of existing political and social conditions in the little-known heart of Asia, together with a frank and impartial criticism of British policy in Tibet. It is perhaps not too much to say that Mr. Crosby is the only English-speaking traveler from whose pen may just now be expected an independent discussion of the grave questions of world politics presented by the British expedition to Tibet.

NOW READY

A LITTLE HISTORY OF COLONIAL LIFE (Two volumes.)

By GEORGE CARY EGGLESTON

OUR FIRST CENTURY — **LIFE IN THE 18TH CENTURY**

A graphic and charming popular story of colonial life with special reference to social conditions, manners, and customs. Elaborately illustrated. With summaries of important historical events by Professor HERMAN V. AMES. Each volume 12mo, *net* $1.20.

Lives of Great Writers, by TUDOR JENKS. With an Introduction by HAMILTON WRIGHT MABIE

IN THE DAYS OF CHAUCER

Tudor Jenks brings the personality and the times of the great writers directly to us. To read after him is to walk the streets and mix with the living people of Old England. He has made the merry-hearted England of Chaucer's time live in our imagination.

IN THE DAYS OF SHAKESPEARE

He creates again our Shakespeare for us—Will Shakespeare, the boy in Stratford, the young man who went to seek his fortune in London, and later returned to the life of a country gentleman, a sportsman, and a neighbor.

IN THE DAYS OF MILTON

The England of Milton is the England from which America drew its life, and Mr. Jenks has pictured Milton the affectionate friend, the blind seer, the lonely prophet of a great new world. Three Volumes. Boxed. Price, $3.00 *net*.

New Volumes in The Trail-Makers Series

A Library of History and Exploration, Prof. J. B. McMASTER, Consulting Editor.

"THE JOURNEY OF LA SALLE AND HIS COMPANIONS, 1668-1687" (Ready shortly.)

Edited, with an Introduction, by Prof. ISAAC J. COX of the University of Cincinnati. With Illustrations and Map. Two volumes. $2.00 *net*.

Recommended by Mr. Sidney Lee.

THE SHAKESPEARE STORY BOOK

By MARY MacLEOD

With an Introduction by SIDNEY LEE, and many Illustrations by GORDON BROWNE. 8vo, Cloth, gilt top. $1.75.

"Miss MacLeod has followed the plot more closely than Charles and Mary Lamb, and a charming book of stories is the result."—*London Times*

Mighty high praise of

Real Boys

Read what is said about it.

By Judge HENRY A. SHUTE

A Book About Real Boys to Carry Old Boys Back to Boyhood Days.

Real Boys.

"Essentially human in every page, and readers of all ages will be carried back to boyhood days."

—*The Boston Herald.*

Real Boys.

"Full of that little touch of nature which makes the whole world kin."

—*Worcester Gazette.*

"This morning I'm feeling 'peart and sassy,' because I have just finished Judge Shute's 'Real Boys.' And they are real boys. I know 'em and played with 'em, even if they have different names. You will say the same thing, too, and find boyish counterparts for Plupy and Pewt, Skinny—all the long roll, in fact. What they did, too, will be paralleled in our own experiences and remembrances. It's a book to read and laugh at and sigh over now, and to dip into for a Ponce de Leon literary rejuvenation every time you feel particularly old."—*Literary Editor The Cleveland Leader.*

Real Boys.

"Will make the reader hold his sides all the time."

—*Baltimore Herald.*

Real Boys.

"You had better read it."

—*Philadelphia Evening Telegraph*

Beautifully printed, cloth bound and illustrated. At all booksellers, or sent by mail, *postage free*, on receipt of price, $1.25.

The Most Important Work of the Year

The IRELAND REPORT *on* COLONIAL ADMINISTRATION *in the* FAR EAST

This Report (the first volume of which is now in press), by Mr. ALLEYNE IRELAND, F.R.G.S., the acknowledged foremost authority on Comparative Colonization, will cover exhaustively the field of British, French, Dutch, and American government in the tropical regions of the Far East, and will furnish

THE ONLY COMPREHENSIVE WORK IN ENGLISH ON THIS IMPORTANT SUBJECT

The countries included are BURMA, HONG KONG, BRITISH NORTH BORNEO, SARAWAK, the FEDERATED MALAY STATES, the STRAITS SETTLEMENTS, FRENCH INDO-CHINA, JAVA, and the PHILIPPINES. The complete work will extend to ten or twelve volumes, royal octavo, of about 500 pages each, and will be sold by subscription. Special maps and copious bibliographical and statistical appendices will be prepared for each volume.

SOME REPRESENTATIVE SUBSCRIBERS:

The following list of a few of the subscribers who have already registered their order for one or more sets of THE IRELAND REPORT *will indicate the estimation in which this important work is held in all parts of the world. In addition to these, very many subscriptions have been received from State and Public Libraries, Educational Institutions, Officials, Statesmen, and private individuals both in the United States and abroad.*

The great value of this work to all students of Political Science will be readily appreciated in view of the growing importance of the Far Eastern Tropics, both in their commercial relations and as an element in International Politics.

A FEW REPRESENTATIVE OPINIONS

From H. H. Sir CHARLES BROOKE, G.C.M.G., *Raja of Sarawak:*
"I feel no hesitation in saying that the Reports will be found very valuable to any one who takes an interest in distant foreign governments, of which Mr. Ireland has reported clearly and justly."

From J. G. SCHURMAN, LL.D., *Pres. of Cornell University:*
"Your work will meet a real need in our literature . . . . Your *Tropical Colonization* is a guarantee of your qualifications to make the undertaking one of high character."

From Sir FRANK SWETTENHAM, K.C.M.G., *former Governor of the Straits Settlements, and High Commissioner for the Federated Malay States:*
"From what I have seen of Mr Ireland and his work there is no doubt that he will do justice to his subject, and I feel great confidence that his facts will be reliable."

From WOODROW WILSON, LL.D., *Pres. of Princeton University:*
"I know how interesting and important Mr. Ireland's Report on Colonial Administration is likely to be, and I will take pleasure in recommending it to our librarian."

From the London *Times:* "Almost every possible variety of tropica government has presented itself to Mr. Ireland as he has passed successively under the British, French, Dutch, and American flags; and upon all he has brought to bear the keen insight of an experienced observer, rejecting the non-essential for the vital, and enriching his survey with a great fund of comparative information."

From the Springfield *Republican:* "The present rank that Mr. Ireland has attained as a specialist in this field is fully deserved, for he has spent fifteen years studying colonization at close range, and he writes with clearness and understanding."

Boston *Herald.*—In an editorial *referring to the chapters on the Philippine Islands in Mr. Ireland's latest book:* "They give the most intelligent and instructive condensed review of the course of our government in those islands that has yet come from any source, and it is certain to command the attention of the people in an extraordinary degree. The author has long been recognized as a thorough and dispassionate student of the general problem of Colonial government on its administrative and economic side."

As only a limited edition of THE IRELAND REPORT will be printed, it is desirable that all who wish to secure a set should register their subscription at once.

Full information will be forwarded on application to the Publishers

SMALL, MAYNARD & COMPANY, 31 Arrow Street, Cambridge, Mass.

Important Holiday Announcements

FOR THE LIBRARY

With Walt Whitman in Camden

A Diary Record of Conversations kept by HORACE TRAUBEL, with many important letters, documents, portraits, etc. The publication of this volume is certainly one of the most important events in the literary history of America. For several years the author, one of Whitman's literary executors, recorded faithfully the conversations and events of his almost daily meetings with the poet. The result is a picture of the daily life and thought of Walt Whitman such as we possess of no other great author, possibly excepting Dr. Johnson. Of the many letters and manuscripts very few have ever been published, and they are from many of the greatest of Whitman's contemporaries. The discussion which accompanied them gives Whitman's estimates and opinions of a vast number of men and events in the most informal and pleasing manner. *Sumptuously illustrated, handsomely bound. Net, $3.00; by post, $3.25.*

Paris and the Social Revolution of To-day

By ALVAN FRANCIS SANBORN. A study of the Revolutionary Element in the Various Classes of Parisian Life. With 72 illustrations by Vaughan Trowbridge. The *New York Mail* says of this book: "It is a refreshing thing to read a book written by a man who knows his subject through and through. We do not believe the social student will find a dull page in the book. It presents the very spirit and essence of poetry, music and art of the French Revolutionary movement; the whole quivering world of modern radical Paris is here." Its value is immediate and international. The principles of human nature disclosed are universal and its interpretations of these principles are full of suggestion to those who would understand the trend of radical thought in our own country. The book also throws much light on the development of the existing revolution in Russia. *Sumptuously printed and illustrated, 8vo, cloth, net, $3.50; by post, $3.75.*

The Life of John Fiske

By THOMAS SERGEANT PERRY. (*Volume 27 of the Beacon Biographies.*) This series once more offers the first published life of an eminently great American, written by one who enjoyed the most intimate personal acquaintance with Mr. Fiske. *Pocket size, cloth, photogravure portrait; net, 75 cents; by post, 80 cents.*

The Aftermath of Slavery

By WILLIAM A. SINCLAIR, with an Introduction by Col. Thomas Wentworth Higginson. The most important book yet issued on the Race question. Edward Atkinson pronounces it "the best book ever written by a colored man, if we except the work of Dumas." *12mo, cloth, net, $1.50; by post, $1.62.*

Josiah Warren

By WILLIAM BAILIE. A sociological study of the first American anarchist; a Boston philosopher now little remembered, but who was honored by John Stuart Mill and whose mechanical inventions included the cylinder press. His life has never before been published, and his writings have long been out of print. *16mo, cloth; with portrait, net, $1.00; by post, $1.10.*

Bacon Cryptograms in Shakespeare

By ISAAC HULL PLATT. A concise and interesting account of certain newly discovered cryptograms (some of which are original discoveries of the author) which seem to indicate that Bacon was in some way concerned in the authorship or publication of the Shakespearian plays. It makes no extravagant claims and fully explains all points discussed. *12mo, net, $1.00; by post, $1.06.*

NEW FICTION

Gumption

By NATHANIEL C. FOWLER, Jr. A tale of Yankee push and progress, with vivid pictures of modern newspaper life, which has many of the essential qualities of sound sense that made "The Selfmade Merchant" so great a seller. The author describes conditions and people in an inimitable style, full of humor and keen satire, and with all its freedom and ease of style, the story has a serious undercurrent which shows the value of good old Yankee "gumption" in the making of success. *With illustrations by Charles Copeland. 12mo, cloth, decorative, $1.50.*

Where Copper Was King

By JAMES NORTH WRIGHT. A remarkably interesting story, full of adventurous incident and with a delicate vein of romance, which records vividly a fast disappearing phase of Western life. With the immense growth of the mining industries on Lake Superior much of the picturesqueness has gone forever, and the Cornish miner, like the Cowboy, has passed away. The author was formerly Superintendent of the Calumet and Hecla Mine, and he describes herein life of which he himself has been a part. *12mo, cloth, decorative, $1.50.*

FOR CHRISTMAS GIFTS

Foot-Ball Grandma

By CAROLYN S. CHANNING CABOT, with an introduction by COL. THOMAS WENTWORTH HIGGINSON. An Auto-baby-ography as told by Tony, with illustrations from Tony's drawings. A book for every nursery which will delight children and grandmammas alike. *Small 4to cloth, decorative; net,* $1.00; *by post,* $1.10

Wit & Humor of Well-known Quotations

Edited by MARSHALL BROWN. A unique collection arranged in the nature of "Themes with Variations." Grouped with each of the 375 well known quotations are many of the wise or witty comments from the most varied sources which serve to illustrate its significance or explain its origin. *Fully indexed, handsomely bound in cloth; net,* $1.50; *by post,* $1.60.

The Lover's Rubaiyat

Edited by JESSIE B. RITTENHOUSE. A dainty giftbook beautifully printed in two colors, with decorations and ornamental cover. An entirely novel setting of the love stanzas collected from ten different translations of Omar "Rubaiyat," containing many of the lesser known quatrains. *Net,* 75 *cents*; *by post,* 80 *cents.*

The Norsk Nightingale

By WILLIAM F. KIRK. A Book of Laughs from cover to cover. In these "Lyrics of a Lumber-yack," a new type of dialect poetry (the Norwegian of the Northwest) appears, no less original than the work of Riley or Drummond *Uniquely bound in Japanese wood boards, illustrated; net,* 75 *cents; by post,* 80 *cents.*

About My Books

"A Reader's Record." Arranged by GRACE E. ENSEY. A handsomely bound volume affording a convenient record for Books to be read, Books read, Books borrowed and lent, Magazine articles and Quotations. With decorative border and apt quotation for every page. *Cloth; net,* $1.50; *full leather. net,* $2.50; *postage* 10 *cents extra.*

Bliss Carman's Low Tide on Grand-Pre & Ballads of Lost Haven

These two books contain much of the author's best work. In this new edition the entire contents of both books are reprinted in a single volume, with a fine portrait of Mr. Carman. *Handsomely bound in Strathmore Japan boards; net,*$1.50; *by post,* $1.60.

Arabella and Araminta

By GERTRUDE SMITH. The continuous demand for this veritable nursery classic has enabled the publishers to issue a new edition containing all of Ethel Reed's full-page illustrations, and handsomely bound in cloth for half the price heretofore charged. *Small 4to, net,* $1.00; *by post,* $1.10.

A Handbook of Figure Skating

By GEORGE H. BROWNE. A thoroughly comprehensive handbook for practical use on the ice, giving in compact form a remarkable amount of information. Over 600 diagrams and illustrations and suggestions for nearly 10.000 figures, with a chapter on the International style of Figure Skating. *Pocket size, flexible leather; net,* $1.00; *by post,* $1.06.

The Rosary in Rhyme

By JOHN B. TABB. A cycle of poems with the perfection of delicate flowers, full of a poetic ecstasy and deep religious fervor which will carry them to all Christian hearts. Decorative drawings by T. B. Meteyard; *350 copies on handmade paper; parchment boards decorative; net,* $2.50; *by post,* $2.60.

At all Bookstores or sent postpaid on receipt of price by

SMALL, MAYNARD & COMPANY, 31 Arrow Street, Cambridge, Mass.

PUTNAM'S NEW BOOKS

Send for New Illustrated Catalogue

"THE DEFINITIVE BIOGRAPHY OF LAMB"

The Life of Charles and Mary Lamb

By E. V. LUCAS
Editor of "The Works and Letters of Charles and Mary Lamb."

2 vols., 8vo. 50 illustrations, net, $6.00.

"For all the happiest things that have ever been said about Lamb, the enthusiasts will find in these two volumes a happy hunting ground. We finished the book not with a note of admiration after a brilliant display of rhetoric, but with a quiet sigh of unfeigned sorrow at a forced parting from a very dear friend." —*London Times.*

Louis XIV. and La Grande Mademoiselle

By ARVÈDE BARINE

Authorized English Version. 8vo, illustrated. Net, $3.00 (by mail, $3.25).

"It is bewildering to think of the many crowns and coronets that might have rested on the brow of this dramatic heroine, a heroine who appears and disappears in clouds of dust, with regiments of cavalry wheeling and whirling around her to the sound of the trumpets—the stern devotee of reason who dismissed one of her maids because she married for love, the philosopher, who debated in her mimic court whether an accepted lover is more unhappy than a rejected lover in the absence of the beloved."—*London Times.*

Portraits of the 18th Century

Historical and Literary
By C. A. SAINTE-BEUVE

Translated by KATHARINE P. WORMELEY and G. B. IVES.

Two parts 8vo, with about 30 illustrations. Sold separately, each $2.50, net.

The quality, the discernment and balance, intuitive grasp of essentials, the grace, force, and justice, of Sainte-Beuve's critical work, have placed him in the front rank—perhaps it would be better to say, have given him a place alone and unapproachable in the history of critical literature.

Kate Greenaway

By M. H. SPIELMANN and G. S. LAYARD

Large 8vo, with 53 full-page colored and 125 other illustrations. Net, $6.50.

Those who think of Kate Greenaway merely as the designer of pretty pictures for children will be surprised to learn what an interesting and important personage she was. Mr. Spielmann shows that among the best artists and critics of Europe, Miss Greenaway is regarded as one of the artist geniuses of the Nineteenth Century. This book is something more than a personal biography. It is rather a peep behind the scenes, led by Kate Greenaway, into the intimate converse of the foremost artists and writers of our times.

The Life of Goethe

By ALBERT BIELSCHOWSKY
Translated by W. A. COOPER

To be complete in 3 parts. Large 8vo. Illus. Each, net, $3.50.

PART I.—1749-1788. From Birth to the Return from Italy. *Now Ready*

"Bielschowsky's life deserves a place with Boswell's and Lockhart's and the other great biographies. In preparing his work, he took for his motto Goethe's own words that 'all the pragmatic characterizations of biographers are of little value, compared with the naive details of a great life.' The narrative form is maintained throughout, and the book reads like a story, the first volume, at least, like a most romantic one."—*N. Y. Globe.*

The Constitutional Decisions of John Marshall

Edited by JOSEPH P. COTTON, Jr.

2 vols., octavo, half leather, gilt tops, per volume, $5.00 net.

These volumes present in a popular but complete form Marshall's opinions in this division of law, of which he is the acknowledged master, with such notes as show the facts of each case, a history of the questions arising in it, its place in Marshall's theory of constitutional government, and its effect on the later law.

At All Booksellers — **G. P. PUTNAM'S SONS** — New York and London.

MRS. FITZHERBERT AND GEORGE IV.

By W. H. WILKINS, M.A.F.S.A., Author of "The Love of an Uncrowned Queen," etc., etc. With numerous portraits and other illustrations. 8vo. 496 pages. $5.00 net, postage (25 cts.) extra.

This book is written with the approval and assistance of the descendants of Mrs. Fitzherbert's family and friends, and gives the text of the documents which Mrs. Fitzherbert reserved in 1833 for the purpose of proving her marriage. These materials are now published for the first time by special permission of H. M. the King, and place the fact beyond doubt. The large number of unpublished papers and letters of great interest give considerable importance to the volume as a contribution to the intimate history of the House of Hanover.

PRINCIPLES OF ECONOMICS

WITH SPECIAL REFERENCE TO AMERICAN CONDITIONS. By EDWIN R. A. SELIGMAN, LL.D., McVickar Professor of Political Economy in Columbia University; Author of "Essays in Taxation," etc. With 28 Maps and Charts, some of which are in color; a general bibliography, chapter references, and full Index. 659 pages. Crown 8vo. $2.25.

TWO YEARS IN THE ANTARCTIC

A PERSONAL NARRATIVE OF THE BRITISH ANTARCTIC EXPEDITION. By Lieut. A. B. ARMITAGE, R. N. R., Second-in-Command of the "Discovery." With a Preface by Dr. Nansen. 1 vol. Demy 8vo. Fully illustrated, $5.00.

Lieutenant Armitage avoids scientific details as far as possible, and aims rather at telling a straightforward story of the daily life, with all its hardships and perils on the one hand, and it boyish amusements and cheery good comradeship on the other.

THE SECRET OF THE TOTEM

By ANDREW LANG. With specially designed cover by FORD. 8vo, $3.00 *net.*

CONTENTS.— ntroduction—Origin of Totemism—Method of Inquiry—Theory of Primal Promiscuity—The Arunta Anomaly—The Theories of Dr. Durkheim—The Author's Theory—Rise of Phratries and Totem Kins—A New Point Explained—Totemic Redistribution—Matrimonial Classes—Mr. Frazer's Theory of Totemism—Appendix: American Theories.

SOCIAL ORIGINS. By ANDREW LANG. **PRIMAL LAW.** By H. ATKINSON. 8vo, cloth, $3.50 *net*

[*Lately published*]

ESSAYS AND ADDRESSES ON ECONOMIC QUESTIONS

(1865-1893)

With Introductory Notes (1905). By the Rt. Hon. VISCOUNT GOSCHEN. 8vo. Cloth, $5.00. [*Just Ready.*]

LONGMANS, GREEN, & CO., 91 and 93 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, NOVEMBER 23, 1905.

The Week.

It being "impossible," Mr. Roosevelt said on November 15, "for the President of the United States to enter into a personal discussion" with Mr. Henry M. Whitney of Boston, he proceeded to do so in his usual vigorous style. It is not of supreme importance whether the President did or did not say, with or without that "context" which he thinks so vital, that he favored Canadian reciprocity and believed in "Continental free trade." We imagine that his present irritation on that subject is due to complaints and appeals from the beleaguered Lodge. Much more significant than this personal controversy is the letter which Governor-elect Guild wrote to the President three days after the election. In it he expressed the belief that he and his party in Massachusetts would have been "overwhelmingly defeated" if in their platform and campaign they had not favored "immediate tariff revision." He added that both parties in Massachusetts desire it; that "all admit" that certain duties are no longer needed, while the tax on hides "is anathema"; and that it is the "urgent desire" of the people of the State that the President should recommend instant tariff reform in his message. Mr. Roosevelt's consent to the publication of the Guild letter shows that he does not consider its sentiments treasonable. His chance is now certainly splendid to dig up that buried tariff message which he was going to send to Congress a year ago, but did not, for reasons which Speaker Cannon could doubtless state.

Mr. H. S. Frye, president of the New England Tobacco Growers' Association, has confounded the standpatters by coming out for a reduction in the tariff on Philippine sugar and tobacco to 25 per cent. of the Dingley rate, and the removal of the tariff tax on all other articles. He acknowledges his apparent heresy, saying: "I know the popular thing to do, and the thing every representative of every protected interest is expected to do, is to get up on one's hind legs and howl calamity." But, strange as it may appear to the Pennsylvania school of protectionists, Mr. Frye urges this reduction in the duty on tobacco on the ground that it will benefit the Connecticut tobacco growers. He finds that there is actually a demand in the islands for New England-grown wrappers, and that the tariff stands in the way of a considerable export business. What happened when the bars were let down in the case of Porto Rico—the increase of the export tobacco trade—Mr. Frye is sure will happen when the barrier is lowered for the Philippines. All this, of course, only bears out the contention of Secretary Taft and men like Representative Hill of Connecticut, who came back from the islands last summer with a new conception of the mutual interests of the Filipinos and the New England tobacco-growers.

"The Tariff as Seen from the Inside" would be the proper heading for the interview with Speaker Cannon which the *Tribune* printed on Friday. Mr. Cannon stands as pat as ever. He professes not to know what 386 men may do about the tariff. He adds, however:

> "If some fellow did introduce a tariff bill, and it was argued and argued, and at the end of twelve months its advocates could gather together enough votes to pass it, the country being held up by the tail in the meantime, I think you'd find that the new law would have just as many outrageous things in it as are found in the Dingley tariff act."

This statement is well within the truth—that is, if a new tariff bill should be framed, as the McKinley and the Dingley bills were, by the "friends of protection." The object of these loving friends is not to reduce the tariff and lighten the burdens of the consumer. That is the last thing they think of. The problem for them, as experience has repeatedly proved, is to draft a measure which shall put the largest possible amount of money into the pockets of those who have most stoutly upheld the system—that is, by liberal campaign contributions. The sign over the door of the treasurer of the Republican National Committee should read: "Drop $10,000 in the Slot and Get a Tariff Favor." So long as this principle is in operation, so long as the consumer is the negligible factor, each new law will be just as outrageous as that which it supersedes.

Elated, and very naturally, by his success in saving nearly a million dollars a year in the printing of department reports, by his injunction of brevity upon his Cabinet, President Roosevelt turns his attention to the subject of official correspondence. It is nearly as bad to be verbose in a letter as in a report. Perhaps the ideal outcome would be to bring the Government's epistolary output back to the proportions of those often-photographed notes which "A. Lincoln" used to scribble on the backs of cards. Every now and then some Washington correspondent performs a valuable service by recounting the familiar story of the routine through which a high public officer must go if he wishes, for instance, to borrow a book from another bureau. "Red tape" is a relative term. There is even something to be said against the impulsive comment that the official should be allowed to put on his hat and go for the book himself without any letter-writing or initialling of papers. But there cannot be two opinions about the bureaucratic tendency which has been gradually turning Washington into one vast letter-file. If the Keep Commission, at the President's behest, can bring in common-sense methods, both will surely deserve monuments.

President Roosevelt appears to have been a bit staggered by the protest of railway employees on November 14 against his proposals for railway-rate legislation. The representatives of the five great labor organizations connected with railroads—engineers, firemen, conductors, switchmen, and trainmen—expressed the fear that reduction of rates would mean the reduction of their wages. In reply, Mr. Roosevelt said that he was only striving after "perfectly fair treatment" for all concerned, and that his plan of control did not mean necessarily a reduction in rates. Then, we ask, what is all the pother about? Why was there so much fuss about the "maximum" and "minimum" rates which the Esch-Townsend bill was to empower a Government commission to fix? Why the new plan to make the railways submit to their losses, under a lowered rate, with right of appeal and reversal if they could show their original rate to have been "reasonable"? The "fair treatment" at which the President aims must refer to secret rebates, local discriminations, the abuses of private-car lines, etc. But they are not to be met by Government rate-making; and if the country is given to understand that the latter does not mean cheaper freights, it will lose interest in the plan. Mr. Roosevelt's statement betrays, in fact, a tendency to waver which goes far to justify Senator Long of Kansas in refusing to promise the Commercial Club of Wichita to "get right" with the President. Mr. Long said that the President had already taken contradictory positions, and that there was no telling what he would recommend to Congress.

The Interstate Commerce Commission was overruled by Judge Bethea in the United States Circuit Court at Chicago on Monday. After a presumably careful examination into the facts of the case, the Commission had directed the lowering of railroad rates on live stock between the Missouri River and Chicago to a point where they would con-

form to the rates on dressed beef. But Judge Bethea, in brief, found that the Commission was entirely mistaken as to its facts, and also as to its legal powers, and gave his decision for the railroads, while declining to grant the application of the Commission for an injunction to force the railroads to lower their rates. The fact that the Commission has been overruled will not surprise Mr. Roosevelt, for in no less than *ninety-three per cent.* of the cases appealed to the courts from the Commission, the Commission has been upset. But he may well pause in his determination to make the Commission the final arbiter in the matter of railroad rates. Not even the promise of the appointment of "only good men" to a reorganized Commission should conceal the danger. Mr. Roosevelt might appoint only men of the calibre of Mr. Taft; but what of his successors? In this connection it is interesting to note that Mr. Roosevelt appointed Judge Bethea to the Circuit Court as a reward for his services as a prosecutor of Trusts. Yet even he is compelled by law and facts to appear, in his first decision of importance to the public, to side with the corporations attacked by the Commission.

We are expected to see a great moral significance in the attempt of Platt and his crowd to wrest the Republican machine of this city and State away from Odell and his crowd. The war between the factions is declared. Even the President is said to be drawn into it—and what lovely associates are assigned to him! He is to go into the glorious struggle alongside Platt and Black and Barnes and Ward and Aldridge and Dunn and Quigg. The noble array on the other side includes Odell and Halpin and Lauterbach and Littauer, along with many underlings and dependents whose names signify nothing—except a mighty appetite. And the Republican party of the Empire State is expected to stand by and wait patiently to see which set of vultures shall establish the right to make carrion of it! Platt may succeed in glutting his revenge upon Odell; the smaller schemers who are so cynically using the "prestige of our former beloved leader" to get their hands upon patronage and plunder, may be able to break Odell's grip upon the machine; but that will simply mean that the last state of the organization is worse than the first.

It is time for a genuine stirring of new life in the Republican party of this State. Why should all its young and ambitious members be content to line up, year after year, first under one boss and then under another, giving the State nothing but a choice of evils, or, rather, evils among which there is absolutely no choice. Critical days confront the party. Legislation of the highest importance must be attacked at once. A Governor is to be chosen next year. Sooner than any one can tell, two live men will have to be elected to the United States Senate, to take the places of two who are dead without knowing it. Yet with all these vital matters pressing upon it, the Republican party is asked to give its time and energy for a year or more to a wretched squabble between embittered rivals for the post of chief ladler-out of the spoils!

Secretary Taft's comment on the Ohio election is of the kind that can hardly be too often or too emphatically repeated. "The result in Cincinnati," he says, "is a long step toward better municipal government and better local party politics, but the victory will not be completed for several years. A machine intrenched in power as is the Ohio machine can only be made to give up through the earnest attention and work of young men entering politics with the enthusiastic and unselfish desire to make it better." He echoes here the thought of the disappointed candidate for Governor, Mr. Herrick, who complained that it was largely blind wrath and desire for punishment that moved the voters to the State's political overturn. As we said at the time, better a vindictive assault on the bosses than no assault at all. But the retirement of one man or a dozen men is no assurance against the return of gang rule. Cox has retired, but so did Croker and a hundred other bosses of past years in our cities and States. The late peaceful revolution at the polls was remarkable in its wide extent, not in its kind. But Ohio, or any other State that actually makes it impossible for a new machine to take the place of the old, will have won unique honor.

The news that voters are being paid $3 apiece for their ballots in Spain is considered important enough to cable to this country. But here an item to this effect would attract about as much attention as a statement that some "prominent citizen" had stubbed his toe. For instance, the Wickford, R. I., *Standard* remarks placidly of the late State election: "There was not much money in circulation. Of course, the old stand-by floaters had to have their fee, but that was probably the extent of the purchasing." Just so might a newspaper report the price of hogs and cows; the only difference is that this market report relates to the buying and selling of votes. In Binghamton, N. Y., the quotations were very low. State Senator Harvey D. Hinman got Elmer G. Sisson to vote in return for one dollar. Sisson's vote was challenged by Democrats who saw the payment made by Hinman. The high-minded Republican Binghamton newspapers, the *Press* and the *Evening News*, naturally belittle the affair. "It was," one explains, "a sensation with little foundation"—this apparently because Sisson got only one dollar. Mr. Hinman himself explains that he in no way advised Sisson how to vote, but merely reimbursed him for his car-fare and loss of work-time—a purely philanthropic action. Yet supersensitive souls find fault with this little business arrangement.

Mayor Dunne of Chicago seemingly has as many ways of attaining municipal ownership as Cyrano de Bergerac had of reaching the moon. His "contract plan" having been definitely rejected by the Council, he comes up now with three alternative schemes for "immediate" municipal ownership. One of these is a modification of his former "city plan," under which the city would proceed to build parallel and competing lines on streets not occupied by the private companies. The second contemplates the condemnation of the companies' property, and the third, an agreement by arbitration on a price to be paid for the lines. None of these is actually new. In fact, there are not many conceivable solutions of the traction question that have not been aired during the years of discussion in Chicago. It must always be remembered in connection with the everlasting interchange of views between the municipal Executive and Legislature, that Chicago's Council is very different from our Board of Aldermen. The weeding-out process of years and the regular reëlection of desirable members have made it an assembly in whose honesty, ability, and understanding of the traction question the people of Chicago have exceptional confidence. It is no longer true, as it was when Carter H. Harrison took office, that to be at loggerheads with the Council was presumptive evidence of a Mayor's own wisdom and integrity.

A visitor from Mars, newly landed in New York, would write home that in this topsy-turvey land the one essential to worldly success is total lack of the faculty known as memory. The most eminent financiers and statesmen of the commercial capital of this continent, he would remark, have recently been giving testimony under oath. While each displays markedly individual traits of speech and taste in dress, they are alike in their absolute inability to remember. A brisk young man named Frank B. Jordan, son of a former comptroller of the Equitable Life Assurance Society, had forgotten everything so completely that, were he a resident of Mars, he would belong in an asylum for imbeciles. A United States Senator, former president

of a great railway, and still member of many important directorates, has apparently risen to his present height of glory because, in the course of a few weeks or months, all names, faces, letters, sums voted for various purposes, policies of action, and reasons of state melt and swim in a hopeless deliquium. A former Governor of the Empire State, leader of the dominant political party, a second man who is a brilliant financier, master of one of the most extensive railway systems in the world, and a third, a young graduate of the oldest and most famous university in America, a patron of art and literature, whose services to an insurance company and certain allied corporations were reckoned to be worth $127,500 a year—these three gave testimony on the same point, and no two of them were able to agree. Presidents of insurance companies with salaries ranging from $100,000 to $150,000 annually had seemingly lost track of all they ever knew about the details of their business—especially the work of their legislative agents. In brief, the visitor would warn his friends who contemplated coming here to live that they must drink of nepenthe.

The publishing of frequent reports by the Mutual Life investigating committee seems to us altogether wise. The investigation may be prolonged; a very considerable time must certainly elapse before the committee can formulate its broader opinions on the present theory and practice of insurance. But in the meantime the Mutual's own situation is one in which delay in the introduction of needed reforms would be most unfortunate. The budget of recommendations reported by the committee on Thursday is entirely to the point. Premising that "certain of the practices and methods are so palpably loose and unsound as to call for immediate attention and correction," the committee advises, first, that all matters pertaining to legislation affecting the company be handled exclusively by the law department, with full responsibility for each and every transaction. This is a stroke at the subterranean lobby system maintained by the Mutual, almost wholly through improper and irregular use of policyholders' money for that purpose. The business of the Albany "House of Mirth" the company declares must be promptly ended, and "Watcher" Fields discharged. The "Department of Supplies and Printing," whose administration of the corruption fund was the most flagrant of all the scandals brought to light, must be reorganized, the committee declares, as to both *personnel* and methods.

Finally, the "commission agency contracts," whereby the McCurdy family was progressively enriched, and of which the committee remarks that they "were originally made and have since been continued or modified" in an "apparently irregular manner," should be brought, the Truesdale committee thinks, to an immediate termination, and be replaced by employment of salaried managers. These recommendations make a good beginning, and promise thoroughness in the committee's dealings, later on, with other important aspects of the situation. Not the least striking paragraph of the report, if one reads between the lines, is the committee's answer to President McCurdy's proposal to cut down his $150,000 salary. In his letter he "considers that it has been earned," but cautiously defers to "the judgment of some policyholders that it is too large." The committee's answer, in declining to deal with the matter as requested, is, that to alter such a salary, and fix its future status, might involve "the committal of the company to the continuance of the *personnel* of the present management."

"John Krup"—if that happens to be his name—is described as "a thin, harmless-looking young chap"; no one seems to have heard his name before; his own lawyers do not, apparently, know his address. He was arrested on election day for the not-unheard-of offence of having voted on a name that did not belong to him. For all that any one can prove to the contrary, he may have voted for Ivins and Jerome. He was perhaps as obscure a citizen as all New York could show. Yet on Thursday morning an ex-Assemblyman of the State of New York, his counsel, deposited $5,000 in cold cash as his bail, and by afternoon he had disappeared. Either we have here a case of purely disinterested charity, or else this man's absence from the city was worth $5,000 to somebody. The offence occurred in Charles F. Murphy's own district; that is the only fact of record. The Krup case comes at a time when the canvass of votes is bringing to light daily an amazing series of blunders, and failures to observe the legal requirements in the tallying of votes—to put the case mildly. The average election board is stupid enough, in all conscience, but if anything in the world is calculated to produce conviction that there was a dishonest purpose behind all these discrepancies, it is just such an incident as the flight of Krup.

The rumor that the Germans were about to withdraw from their Chinese colony was, of course, promptly denied. The colonizing nation which will voluntarily give up a country to its rightful owners has yet to be discovered. Germany never pretended to a trusteeship in Kiao-chau as did the United States in Cuba. She was there for what there was in it, precisely like England in a hundred places, and the French in Tonquin. When the Boxer troubles began in China, "merely to defend her rights" Germany established a garrison in the province of Tchili beyond her treaty possessions, acting in concert with others Powers. It is this which she has now withdrawn. Whatever the motive, the Anglo-Japanese agreement as to the integrity of China undoubtedly influenced this German action. Doubtless, taking a lesson from England's book, the German Colonial Office would have liked to extend its lines on the absurd plea of military necessity. The truth is, that Kiao-chau is now about the only German colony of importance in which there is neither openly expressed dissatisfaction nor stubborn revolt. Hence the Colonial Office, far from meditating an unselfish retirement from it, is probably preparing to cite its condition as part of the defence of its actions which it will have to make when the Reichstag meets in November. For members of that body have repeatedly asked the Government why its Tchili garrison was not withdrawn, always drawing out indefinite promises of future action.

The Czar's decision to remit a portion of the arrears in payment due by the peasants for their land allotments may have a pacifying influence on the agrarian disturbances in central and southeastern Russia, yet the Socialist demands may be heightened, and the agitation in Poland may derive new impetus. It may well be doubted whether any merely palliative measure, such as an extension of the operations of the peasants' bank, or a gradual transfer of land now held by private owners or by the Crown, would satisfy the earth hunger of an ignorant peasantry. Unscrupulous agitators have inflamed passions, and a pillaging descent upon the landlords' property offers speedier relief than the manifestoes from St. Petersburg. The Government's proclamation met perhaps the most crying need of the hour. The allotments were made directly after the emancipation of the serfs. The holdings, inadequate originally, in the majority of cases, have become increasingly so with the rapid growth of the rural population, and the arrears have swollen to hundreds of millions of rubles. The vast extent of the territory involved in the present disturbances, which includes but few towns of considerable size whence troops could be dispatched to the scattered villages, affords full scope to the marauding peasants, and renders the position of the large landowners a precarious one. But, whatever the ultimate outcome, the manifesto gives evidence of the Government's intention to recede from its first position toward the rural classes.

A MISUNDERSTOOD STATESMAN.

We extend our sincere sympathy to Benjamin B. Odell, jr. After reading his testimony before the insurance inquiry on Thursday last, it is apparent that a more misunderstood statesman never figured in American political life. Mr. Odell has apparently been pursued for years by some malign fate which has sought, by means of astounding coincidences and misleading appearances, to entangle this good man in such a way as to all but destroy his fine reputation and to dig that premature political grave beside which Thomas C. Platt already stands weeping. After studying Mr. Odell's career, it is easy to understand how innocent men are hanged on circumstantial evidence. The brain of Poe himself could not have woven a more astounding mesh of false inferences with which to bind and deliver an innocent hero to his enemies than that from which Mr. Odell is struggling to cut himself loose.

Mr. Odell is a man of a peculiarly sensitive nature, which leads him to burn with indignation whenever he beholds injustice, particularly if the public is the one to suffer. Naturally, therefore, his anger flamed forth when he discovered that, through Alexander & Green and the Mercantile Trust Company, widows and orphans were being fleeced of their all by alluring prospectuses of no less than fifteen stock-jobbing companies, conceived in infamy and brought forth for purposes of plunder. At once the Governor sends for Senator Ambler and declares that the wrong must stop. Forthwith this fellow-purist introduces a bill repealing the charter of the Fireproof Warehousing Company, under which the Mercantile Trust Company was doing its business. This was ever the Governor's impulsive way—show him a wrong and he would draft you overnight a bill to stop it. But, on sober second thought, this knight-errant recalls that he himself has a claim against the Mercantile Trust Company, quite forgotten in the heat of his ire—and this is coincidence number one. With his usual delicate feeling about what is right and proper in a public officer, Mr. Odell sees that his action would be misinterpreted — curiously enough, it already had been by some newspapers—and so he orders the remedial legislation killed. Widows and orphans and other lambs might be sheared, but their rescue should not be purchased by the staining of the Governorship. Rather than injure the good name of the State through its executive, the Governor put his indignation aside, and the Mercantile Trust wolves had leave to continue to pull down their prey.

Meanwhile, of course, as Mr. Odell held that the Governor of the Empire State should not be concerned with Shipbuilding bonds—since they had proved worthless—he once more showed his readiness to injure himself at the behest of duty by selling these bonds at a loss of $125,482.36. It is, we submit, merely coincidence number two that they should have been purchased when Mr. Odell was serving his first term as Governor. Must not a governor, like other people, invest his moneys? But the Governor, freed by the sale, felt that some punishment must be meted out to those who had betrayed him. Hence his suit against the Mercantile Trust—and more astounding coincidences. It was an accident, merely, that Mr. Odell met Mr. Hyde at the offices of Mr. Harriman, with whom the Governor never had any business relations. And there Mr. Odell informed Mr. Hyde of the stern decision he had arrived at that there should be no legislative punishment of the Trust Company. *Noblesse oblige.* Mr. Hyde knew how to respond in kind, and the check for $75,000 was promised, though not until further negotiation had taken place.

By another unhappy coincidence, long before this happy conclusion had been reached, Mr. Odell's sense of duty impelled him to advocate the election to the Senate of some other person than Senator Depew, since 1877 a director and a legal adviser of the Equitable, which owned the Mercantile Trust. There was absolutely nothing behind Mr. Odell's opposition to Mr. Depew but a worthy desire to improve the State's representation at Washington. But, as he himself afterwards admitted, he had misread the sentiment of the up-State Republicans. When he found that he had erred, and that Mr. Depew's retention was the wish of the party, he announced, in the morning newspapers of December 30, 1904, that he withdrew his all-powerful opposition, and that Mr. Depew would continue to represent the State—and the Equitable—in the Senate. Alas! his cruel fate had one more terrible blow in store for him in the shape of another, on its face, damning coincidence. *That same day, December 30, 1904,* in his morning's mail, Mr. Odell found the long-promised check for $75,000 from the Mercantile Trust Company. Mephistopheles himself could not have planned more subtly to undo virtue.

To make matters still worse, busybodies are recalling that when Mr. Odell receded from his opposition to Senator Depew, Senator Brackett charged him with saying that he must do so or break with his "dearest friend"—an unofficial explanation which, if true, would, after all, merely reflect Mr. Odell's loyalty to his friends. Nor is there reason to criticise Mr. Odell because at Mr. Harriman's request he wrote to Mr. Roosevelt urging Mr. Hyde's appointment as ambassador to France. This was not an effort on Mr. Odell's part to get back his $75,000, but was merely an example of his Christian readiness to do a good turn to one who had wronged him. It is quite absurd to insinuate that, in aiding Mr. Hyde's ambition, Mr. Odell was also aiding his "dearest friend" to get Hyde out of the country, so that the "dearest friend" might get at the Equitable's surplus. It was again only a coincidence that the letter should have been sent before Mr. Odell received his check of $75,000. Truly, as a victim of so many trying coincidences, we believe Mr. Odell to merit the sympathy, not the carping, of every charitable soul.

THE UNHOLY ALLIANCE.

Mr. Hyde's testimony last week stripped away the last shreds of the veil behind which grafting financiers and grafting politicians have been hiding. Suspicion has now become certainty. We see the whole politico-financial conspiracy revealed. It was not only great speculators who were driven wild by the sight of the vast life-insurance surpluses; politicians also went frantically to work to get their clutches upon a part of the huge accumulation. The dovetailing of greed and corruption, in finance and politics, is now clearer to the public vision than ever before. Mr. Hyde, with either the innocence of an *enfant terrible*, or the quiet resolve of a man with his back to the wall to tell the whole truth, has given the world a picture of the unscrupulous politician in alliance with the conscienceless financier, which no subsequent protests or attempts at correction can blur.

Ex-Gov. Odell, for example, is a ruined man. "Questions of veracity" between the masters of many millions are always "painful" for a society in which wealth has insensibly come to be a synonym for virtue. We shall not undertake to decide whether Mr. Hyde or Mr. Harriman committed perjury, but may remark that the chief issue between them is narrower than some seem to suppose. It is simply whether Mr. Harriman did or did not suggest to Mr. Hyde that Odell ought to have his demands satisfied because he was so powerful politically. If he did, he but made himself an echo of what Albany correspondents and the New York newspapers were saying week after week. It was "in the air" that Odell was too big a politician to be trifled with by any mere millionaire, vulnerable at many points. Whatever is to be said of the ex-Governor's explanations, it is clear as daylight that Odell has now to fight for his political life. Whether or not his exculpation be pronounced technically and legally adequate, the blow has fallen upon him, and the signal for an assault upon the stronghold of his power, the State Chairmanship, has been given both at Albany and Washington. Odell is a man of great vigor and determination, and has many political resources. He may, for a time, sustain himself; but if he does, he will sink his party in this State.

In the field of national politics, too, we have further details of the same unholy alliance. Republican fingers burned to get at trust funds. The Equitable also paid $50,000 to elect Theodore Roosevelt. That sum—$50,000—appears to have been the "assessment" of each of the big companies by the National Committee. Treasurer Bliss, Mr. Hyde testified, got that amount at the expense of the Equitable policyholders, the plain understanding being that "many large corporations" were also contributing heavily. And yet we seem to remember a fine moral indignation at Judge Parker for asserting this to be the case a year ago. If our memory serves, a heated document issued from the White House on that subject. True, Judge Parker made specific allegations of blackmail by Mr. Cortelyou, which he could not sustain; and the President's denials were technically correct. Still, if the facts now known had been known last November, the public would have thought the case as bad as Judge Parker asserted. But all this was before Mr. Hyde went to the White House to ask for the ambassadorship to France in return for the Equitable's contribution. On this point, Mr. Hyde testimony is illuminating. To be sure, Treasurer Bliss requested money so as to save the country from the Democrats, but that did not prevent the saviours from coming in for something handsome. Both he and Mr. Frick felt that Mr. Hyde's qualifications for the Embassy at Paris rose with every $25,000 he took from the policyholders to give to the campaign fund; and they backed him—or fooled him—to the top of his bent.

This matter cannot rest here. We have had a good deal of financial housecleaning, in consequence of the insurance revelations, but the political housecleaning is yet to come. And there can be no doubt who should take charge of it. President Roosevelt is the leader of the party which has been sadly smirched. He himself stands as the presumptive beneficiary of the concealed gifts of corporations. It is beside the point to say that his great popular majority showed the shady financial soliciting of his committeemen to have been unnecessary. Neither he nor they knew it to be unnecessary. The money was asked for on the ground that it was indispensable. These huge sums were taken and used, and used for Mr. Roosevelt's benefit. That he did not, in fact, need the tainted money, does not excuse its being sought and accepted; nor does it relieve him from the duty of publicly repudiating his agents (which he has not yet done), and taking vigorous measures to prevent the repetition of such scandals as those with which they have stained the Republican party. We look to President Roosevelt's forthcoming message for plain speaking on this subject, and for recommendation of laws to prevent his party, or any party, from disgracing itself and debauching the electorate with money secretly and corruptly obtained from corporations. Only by some such step can Mr. Roosevelt both clear his own skirts and do the country a service for which the times are crying out.

THE IMPROVED BALLOT IN PRACTICE.

Thus far, in the agitation for ballot reform in this State, we have heard little but *à priori* reasoning. Such and such a form must necessarily have such and such an effect; this provision will encourage independent voting; that will serve as a guide to the illiterate; the other will eliminate the perplexing questions of legal marking. It is perfectly possible, however, to show not what would, should, could, or might be accomplished by an enlightened form of ballot, but what actually has been so accomplished.

There are at present six States whose election laws embody the essential principle of all the model ballots suggested for this State—namely, the elimination of the straight-ticket circle. Last year there were seven, but Rhode Island, thanks to her Republican organization, last winter exchanged the excellent Massachusetts ballot for one similar to our wretched New York type. One of the remaining six, Montana, has a ballot arranged on the party-column plan; that is, the names of each party's nominees from the highest to the lowest are printed in a separate column, as in this State, but there is no emblem at the top and no method by which a straight ticket may be voted at one operation. If a man desires to vote for the Republican candidates in a body, he must still put a separate mark opposite the name of each of the said Republicans. The other five have the names of candidates grouped according to offices. New York has always prided herself on an exceptionally active independent sentiment in politics and a large non-partisan vote. Let us see how the amount of independent voting here compares with that in the States which use enlightened ballots.

It is not possible in most of the States to determine accurately the extent of split ticket voting. A convenient method of approximating it, however, is to add the vote of the two great parties for every office, and find what proportion each bears to the total. Then, by comparing either party's percentage for the office on which it does best with that on which it does worst, we obtain a figure which roughly represents the net amount of ticket-splitting.

On this basis we find that in the election of 1904 in New York the difference in relative vote between the highest and lowest State officers was 1.88 per cent. In 1902 the vote for Cunneen for Attorney-General, in the Democratic column—leaving out his Prohibitionist votes—was but .47 per cent. more than that for his least successful colleague on the ticket for executive officers; of the judicial candidates there is more to be said. Following are the corresponding figures for the States with more progressive ballots:

PERCENTAGE INDEPENDENT VOTING. STATE TICKETS.

Massachusetts	1902	4.55
	1903	4.60
	1904	13.90
Rhode Island	1902	10.14
	1903	7.09
	1904	9.83
Maryland	1903	.12
Minnesota	1902	4.67
	1904	20.29
Montana	1904	6.93
Nevada	1902	9.60
	1904	.87
Oregon	1902	11.07
New York	1902	.47
	1904	1.88

This table is not merely a political curiosity. The figures are vital, because the amount of split-ticket voting is also an inverse measure of the chance which a bad or unfit candidate has of being "pulled through" by a good one. We have thought it fairest to compare here the members of the State administrative tickets only. There have been many occasions in New York where there was much splitting of tickets with regard to some one office, especially if that were judicial. Thus, if Judge Gray's vote be compared with that of the Democrat who ran farthest behind the State ticket in 1902, the difference amounted to 8.67 per cent. Mr. Jerome's vote represents nearly five times as much independent voting as that. But such results have been secured even with ballots much worse than ours. Folk ran 30,000 ahead of his ticket in Missouri, where the only method of splitting was to write in his name on the Republican strip ballot. Great movements brush aside all such obstacles. The peculiar service of a really good ballot is that, by requiring the voter to scrutinize—at least to look at—every name, it brings about discriminating voting among even minor offices.

We have here classed together all the ballots lacking the straight-ticket circle, whether or not they adopt the group by offices, and we see that all except Maryland showed high percentages of independent voting in their recent elections. The converse of this must be remembered, too. Take any one of the excellent ballot forms proposed for this State, and place somewhere upon the sheet a series of spaces where a straight Republican or Democratic ticket may be voted by a single cross or stamp, and the ballot becomes at once very little better than our present one. To put such a provision in a ballot law otherwise good is an old politician's trick. It was done in Colorado, and it was done in Pennsylvania. Both these States have

the semblance without the substance of a good ballot. New York should be warned in time against any similar attempt.

THE PANAMA MUDDLE.

With each new step forward at Panama, we seem fated to take two backwards. If anybody chose to argue that there had all along been a conspiracy to delay matters and to heap up expense and finally to disgust the American people with the whole project, we must say that he could point to a good deal of presumptive evidence. Saturday's decision by the board of consulting engineers would not be the least item of it. It is an unhappily divided report which is to be made to the President, the nice question on which side the weight of technical opinion really lies not being determinable until names and details are given. Mr. Roosevelt will have to refer the conflicting plans to Congress; and thus we shall have the greatest engineering problem of the age passed on to 476 men who know nothing about engineering. What a vista of empty debate and fresh delays opens before us!

The whole thing is, first of all, a sardonic comment on the President's way of "doing things," with his finger always on a hair-trigger. What was the excuse given for his lawless course in Panama two years ago? Why, it was that the intolerable postponements of the people's hope of an Isthmian canal must be ended, once for all. Talk not to Mr. Roosevelt of being patient with Colombia, and taking six months more to renew and perfect a treaty in an orderly way. The thing had to be done out of hand. There must not be another day's delay. If necessary to filch the canal by means of a bogus revolution and a bouffe republic, do it without hesitation—anything, rather than lose an hour's time in setting to work. Secretary Taft, in his speech on Saturday at St. Louis, deprecated the use of the phrase "make the dirt fly." But it was the President's own. To the Yale professors who questioned the legality of his action, he sent the triumphant message: "Tell them that I am going to make the dirt fly on the Isthmus." That was two years ago, and where are we now? Still, according to the majority of the consulting engineers, fifteen or twenty years away from the completion of the canal, and with an outlay before us of $250,000,000 or $300,000,000, instead of the $140,000,000 asked of Congress.

The final muddle will be highly disconcerting to the President. He looked for a unanimous report, surmounting all technical difficulties, and he finds the engineers he appointed sharply and hopelessly disagreed. In his address to them at Oyster Bay, he put "the utmost practicable speed" in the forefront. They coolly talk of a period which will leave the canal unfinished even after Mr. Roosevelt's fourth term in the Presidency—if he fulfils the predictions of his friends and is elected again in 1912 and 1916. The President urged "immedate building"; he has got something painfully like "immediate ownership" in Chicago. "Immediate" will soon be defined in the dictionaries as "American political slang meaning 'never.'"

On the technical aspects of the case, it does not become a layman to pronounce. We must await the reports and listen to the experts. It is clear, however, that some of the rumors set afloat at Washington, with the reported alignment of engineers and the alleged reasons which guided them, are to be received with much suspicion. The proceedings and the vote were actually secret, and the contradictory leakages given in the press make impossible sure knowledge of what the real status is. It is said, for example, that one reason why the sea-level plan was favored was that the lands to be flooded under the terminal-lake project would cost from $30,000,000 to $40,000,000. This must be a tremendous exaggeration. Under our treaty with Panama, there was absolutely ceded to the United States a zone of "the width of ten miles," with "any other lands and waters . . . necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the said canal." Such of this property as was privately owned, is to be appraised and paid for according to its "value before the date of this convention." That is, we have in any case to take and pay for most of the land to be flooded; the Panama Railroad, which we have bought, owns a good deal of the property to be damaged; and, finally, the very best use to which the low-lying swamps and jungles can be put is to cover them with water and do a great work of sanitation at a stroke, while producing a good stretch of lake navigation for vessels in transit.

The sea-level plan undoubtedly appeals to the man in the street; what the man on the bridge of a 30,000-ton steamer may think of it, is another story. It sounds well to talk of "making a Bosphorus" at Panama, but, on examination, we find this Bosphorous is to be a canal only 150 feet wide; and the difficulties of taking a ship like the *Baltic* or the *Amerika* through it would be admitted by all navigators. Besides there has to be one lock, at Miraflores, even in the sea-level plan; and hence we seem to be going to an extra expense of at least $100,000,000, and a delay of seven or eight years, chiefly for the sake of ruling out three locks and keeping one. The situation gives fresh point to the question asked by Gen. Abbot in the *Engineering Magazine* of last February:

> "It is the unanimous opinion of all the engineers who have had practical experience in canal work, and time to study the problem thoroughly, that no sea-level project without locks, and no sea-level canal with a tidal lock, is practicable, that would be comparable in ease and safety of transit to one equipped with modern locks and planned to take advantage of all the desirable elements which the natural conditions offer. Why, then, waste an extra ten or a dozen years and untold millions of dollars, to execute a scheme which the investigations of thirty-five years have demonstrated to possess only a sentimental merit due to the imagination of M. de Lesseps!"

Plainly nothing has yet been finally decided. There will be at least two reports from the engineers. Probably both will admit the feasibility of either plan, and will look only at the preponderance of advantages differently. The President and Congress may take another view. In any case, we are as far off from an actual beginning as ever; and Mr. Roosevelt's strenuous driving has simply left us floundering in the Panama morass.

MR. WHITEHEAD AND HIS TORPEDO.

The death in England last week of Robert Whitehead, the inventor of the automobile torpedo, ends the career of a man who as fairly revolutionized naval warfare as did Ericsson with his monitor. Not that Whitehead first hit upon the idea of blowing up vessels by torpedoes. For more than a century prior to Whitehead's success, there had been recourse to stationary or movable torpedoes. During our civil war they became a large factor, the Confederates destroying with them seven Federal ironclads, thirteen wooden war vessels, and seven transports, besides damaging eight other ships more or less severely. These feats were accomplished, either by anchoring torpedoes in the channel, as at Mobile, where the *Tecumseh* was sunk, or by exploding them alongside a vessel from a small boat. This involved great risks, and not infrequently cost the lives of all the assailants, as happened in some of the attacks on the Union fleet off Charleston. When Cushing sank the Confederate ram *Albemarle*, he did so with a little launch carrying a torpedo fixed to the end of a spar.

To supplant this clumsy method, so unfavorable to the attacking forces, by a dirigible torpedo became more than ever the objective of naval inventions, as soon as the civil war demonstrated what havoc could be wrought by an underwater explosion. A Capt. Lupuis of the Austrian navy had by 1864 progressed far enough with his plan of an automobile torpedo to need the assistance of a good working mechanic. He engaged Mr. Whitehead, then manager of an engine manufacturing company at Fiume. From that time on, Mr. Whitehead de-

voted himself to the automobile torpedo. Abandoning Capt. Lupuis's plans, he succeeded, in 1867, in perfecting the delicate machine which bears his name, with the assistance only of his son, a mere boy, and one trusted workman. As a result of that success, every navy has its fleet of torpedo boats and torpedo-boat destroyers, and almost every cruiser and battleship has its torpedo-launching tubes. In order to combat this terrible weapon, there was introduced first the torpedo netting, now discarded, and then the quick-firing guns, intended to protect a warship by an incessant hail of projectiles. Incidentally, the weight of armor on all protected vessels was greatly increased, and finally the submarine was undoubtedly hastened by the Whitehead invention. Indeed, the torpedo has probably had a greater influence than any other factor, save the comfort of men and officers, in developing the modern topheavy, high-sided fighting vessel, as the standard type of battleship, instead of the Ericsson monitor.

Whitehead's first torpedo was of steel, 14 inches in diameter, weighing 300 pounds, and carrying as its explosive 18 pounds of dynamite. Its speed was low—only six knots—and the right to manufacture was purchased by the English Government in 1871 for the trifling sum of $15,000. As now developed, the Whitehead, whose motive power is compressed air, has attained a speed of 26 knots an hour, with a range of 4,000 yards. It can be regulated to explode by impact or after a definite time; it may be set to travel at a uniform speed and depth the whole of its range, or both depth and speed may be varied. So remarkable is its mechanism that it may be made to rise to the surface or sink to the bottom after missing its mark. Its "war head" being detachable, it can be used again and again during practice with perfect safety. In length, the Whiteheads used by the United States navy vary from thirteen to eighteen feet. Whitehead himself re-designed his torpedo in 1876, 1884, and 1889. By 1885 and 1886, torpedo boats for the discharge of these weapons were constructed by Austria, Chili, China, Greece, Italy, Portugal, Russia, Spain, Sweden, Turkey, Germany, France, and Great Britain. To-day, England alone has 142 torpedo-boat destroyers, 117 first-class torpedo boats, and 72 of the second class, in addition to 39 submarines built or building. In addition to this, automobile torpedoes are part of the coast defence of several nations.

So far as the effect of Whitehead's invention upon general naval tactics is concerned, the battle of the Sea of Japan affords the best illustration, although full and accurate reports of the part played by the Japanese torpedo boats are not yet at hand. It is believed, however, that some of the Russian vessels were directly sunk by torpedoes, and that others received the *coup de grâce* from torpedo boats after they had been wrecked and put out of action by gunfire. Moreover, the repeated Japanese torpedo attacks, even when successfully repelled, as at the beginning of the battle, kept the Russian crews in a high state of tension and excitement, just as the Spanish destroyers at Santiago made our American naval officers nervous and set them to seeing spectres and firing at phantoms. As long as torpedo boats are in the vicinity of a fleet, its crews will be nervously wrought up. For many years to come the success of the Japanese torpedo attacks at Port Arthur on February 28 and the destruction of the *Sebastopol* should be the classic examples of the damage which can be wrought by daring torpedo officers. One lesson of the late war is that torpedoes are of little value on board large ships, while the torpedo tubes on them are sources of structural weakness; but this had already been foreshadowed. It must not be forgotten, however, that floating mines were even more destructive than torpedoes. Three big battleships foundered at once on striking mines, while not one was totally destroyed by a single torpedo.

In this connection it is interesting to note that, as the United States was the last country to build torpedo boats, so its naval officers, by their own admission, have paid far less attention to this mode of warfare than have foreign navies. Not until 1900 was the first torpedo with a war charge fired by an American torpedo boat. This indifference is distinctly regrettable, because the United States is the country, above all others, which can be well defended by a torpedo flotilla. Unfortunately, our naval experts are now far more concerned with heavy offensive squadrons than with the defensive measures long urged by the founders of this Government. But if our navy were to devote itself to developing torpedoes and torpedo boats, it might demonstrate that the country needs fewer battleships than it has to-day—and this, from the point of view of many officers, would never do.

THE NATIONAL ACADEMY OF SCIENCES AT NEW HAVEN.

NOVEMBER 18, 1905.

The meeting of the National Academy of Sciences in New Haven on November 14 and 15 was perhaps not as full as might have been expected; no quorum of the Council was present, and the number of papers by members was not large, but it may be doubted whether there ever was a meeting in which so much was brought forward that had a flavor of great scientific novelty, inasmuch as the new conception of matter which has resulted from the study of various kinds of radiation is now taking on the aspect of a greater revolution in science than did the advent of the doctrine of energy or that of natural selection, and therefore of the greatest since Newton, if not since Copernicus.

The most astounding surprise, though the matter had been rather skeptically heard of before, was the demonstration shown in photographs brought home from South Africa by Prof. W. M. Davis, of the ancient glaciation in that country. Prof. Davis reported that, as far as he heard, all the geologists at the Cape Town meeting of the British Association were fully convinced that the scratches on the rocks and other apparent vestiges of a great glacier sheet were veritably what they had seemed to South African geologists to be. Yet, in addition to some minor difficulties, such as the total absence of terminal moraines, this South African glacier sheet presents two features wholly unprecedented, one of them truly astounding. The former is that this glacier belonged to the Permian epoch, though it has hitherto been supposed that the glacial ages were all, geologically speaking, recent, and indeed have not yet quite come to an end. One is hardly prepared to say why there might not have been glaciers in Permian times; but belief is almost staggered when we learn that this sheet, starting well within the tropics, moved due south toward the Cape. We are reminded, however, that the newly discovered source of energy by radio-active decomposition of elements of high atomic weight is so tremendous that the age of the sun, and consequently the length of geological eras, must probably be far greater than those who have listened to Kelvin and the physicists have been accustomed to think. Moreover, the present view is that the planets generally have performed a half-somersault under tidal action, so as to rotate now from south to east, though at first they turned from south to west. But such a change, by dynamical necessity, must have been accompanied by a vast shifting of the axis of each planet. We are, therefore, tempted to think that there might have been a time when South Africa was warmer than the parts that are now in latitude 20° S. Somebody ought to examine into this. It illustrates, at any rate, how limitless is the field of consequences which may result from Madame Curie's discovery.

We cannot be surprised at finding that young men are the most alert in assimilating the new conceptions which old and young are now driven to admit, but the old with some not very definite reserve. Dr. B. B. Boltwood, who was introduced by Prof. H. L. Wells, exhibited a curious table showing calculated ages of certain minerals in millions of years. Here, again, we have to remember that there is no longer any solid reason for refusing to acknowledge the lengths of geological time upon which the geologists have always insisted, nor, indeed, if the affirmative reasons are sufficient, the still vaster durations demanded by the palæontologists. It now appears that helium is set free in all radio-active decomposition, and in point of fact the atomic weight of uranium exceeds that of thorium, as nearly as we know, by twice the atomic weight of helium, and exceeds the atomic weight of radium by three times the same amount,

as if U=Th He_2=Rd He_3; and radium, which undergoes five successive radio-active decompositions, has an atomic weight exceeding that of lead by five times the atomic weight of helium, as if Rd=Pb He_5. For this and another weighty reason, Dr. Boltwood suggested last spring that the final product of the decomposition of radium is lead, an idea which has been received with favor. The other reason to which we allude is, that the proportions of lead and helium in the radio-active minerals are correct if we suppose that they were all pure thorium minerals at first; and in point of fact all do contain thorium. It is singular that the rate of each kind of radio-active decomposition remains absolutely constant at all pressures, and at temperatures ranging from that of liquid air to the highest temperatures that have been tried. Nothing seems to disturb its march. On this basis, then, Dr. Boltwood has determined, from the amounts of lead and of helium per gramme of the mineral, the length of time required to produce that amount for all the minerals for which the calculation is possible—a long list from various parts of the world; and the truth of the calculated times seems to be decidedly confirmed by the calculations turning out to give all the minerals from any one region, however different they may be in composition, pretty nearly the same age, although minerals from different regions show decidedly, and sometimes vastly, different calculated ages. Thus, the calculated ages of five minerals of Connecticut range from 92 to 98 millions of years, those of North Carolina 119 to 127 millions of years, and those of Norway from 290 to 383 millions of years.

Stupendous as these periods of time are, it does not appear that the physicist can any longer deny them, and they appear to receive some support from the southward motion of the glacier sheet of South Africa. There is, however, one point of serious doubt. Many chemical reactions proceed with extreme slowness at ordinary and lower temperatures, but, when the substances are heated to a certain point, they suddenly advance with great rapidity. Now experiments upon radio-active decomposition have never been made above 200 degress C, which is below the heat of a good baker's oven. It is, therefore, quite possible that at some higher temperature this decomposition should proceed very fast, especially if certain other conditions that might be pointed out should be realized. For the present, this consideration must throw a not inconsiderable doubt over Dr. Boltwood's calculations.

Dr. H. A. Bumstead, who was introduced by Professor Hastings, is a Yale graduate, already favorably known to the scientific world, who has been working for a year under the guidance of Prof. J. J. Thomson, the chief promoter of electrons and all these ideas, in the Cavendish Laboratory. His paper greatly impressed the physicists by its refinement and cautious attention to every source of error, although it is impossible here, in short compass and without drawings, to give any idea of its merits. When the Röntgen rays strike upon metals they liberate a quantity of energy considerably in excess of that which went to their production. This excess of energy can be due only to the radio-active decomposition of the metal, although it would be quite impossible to detect, by chemical analysis, that any change had taken place. We have been accustomed to think of the liberation of energy in combustion as very great; but that which is liberated in radio-active decomposition is millions of times greater. Dr. Bumstead has taken a pair of elements, zinc and lead, the one of low atomic weight, the other of high, and, by measuring the difference of energy resulting from the action upon them of the Röntgen rays, studied the radio-active decomposition.

Another young man, known for excellent work in collaboration with Dr. Bumstead, Dr. L. P. Wheeler, introduced by Professor Hastings, gave an excellent paper and one very convincing of the value both of Professor Hastings's leadership and of the influence of Willard Gibbs. It was a mixed mathematical and experimental research, admirable in both directions, into metallic reflexion, the polarization-effects of films and of scratches, etc.

Another paper connected with the new conception of matter, and indeed opening a rich field of suggestion concerning electrons, was by one of the leaders in physics, Professor Trowbridge. He described, and illustrated by photographs thrown upon the screen, the singular effects which he had produced in large tubes traversed by a current from a battery of twenty thousand cells of great resistance. When sparks are used, we get only instantaneous effects, but, with such a continuous source of high-tension electricity, slow alterations are observed, occupying minutes in their performance. A volume-ionization is manifest, which slowly increases, and also an ionization-lag. There is a decided unipolar discharge. With some arrangements, rotating brushes are seen, together with phenomena which decidedly resemble the shifting of the Northern lights.

A paper, perhaps indicating an unrecognized state of matter, was by the veteran Professor Brewer. He had formerly given some account of his observations upon the deposition of sediment from water in which clay had been stirred up. But, the vessels not being transportable without disturbance, it was not until the Academy came to New Haven that he could actually exhibit his results. He had several two-gallon bottles with vertical sides, containing clay and pure water, which had not been shaken for fourteen and for twenty-two years. Yet an opalescence was still visible in them, and Professor Brewer was of opinion that the clay never would completely settle. It seemed to be in a colloidal condition, in semi-chemical union with the water, and diffusing through it. But Professor Brewer informed the Academy that if a minute quantity of salt water were to be added, the water would completely clear itself in a few days. To this paper Professor Brewer appended another with specimens demonstrating that wood will never rot under the influence of pure air and moisture, even if considerably heated. If, however, the smallest particle of rotten wood be introduced into the vessel, the rot will soon spread through all the wood present.

There was one exceedingly interesting paper upon mineral chemistry by Professor Penfield, the well-known mineralogist. It seems that some time ago he received from a correspondent a package of small crystals found at Borax Lake in California, the sender remarking that they contained magnesium and sodium in the form of carbonates and chlorides. One crystal, being taken at random for analysis, was found to have the described composition, with the singular difference that, instead of chloride, it contained sulphate. Now every student of chemistry knows that a sulphate cannot replace a chloride without a complete change in crystalline form; yet all the crystals were alike. It was, therefore, at first supposed that some blunder must explain their having been described as containing chloride. However, further examination showed that of the crystals which remained after taking away that one, some seven thousand in number, not one contained any sulphate at all. After that, one other crystal was met with which contained sulphate and no chloride. The formula of the first and last was

$$2MgCO_3,\ 2Na_2CO_3;\ Na_2SO_4;$$

That of the other seven thousand was

$$2MgCO_3,\ 2NA_2CO_3;\ 2NaCl.$$

The crystals containing chloride were somewhat soluble; those containing sulphate were insoluble. Moved by a rule of old-time chemistry about the precipitation of insoluble salts, Professor Penfield imagined that though the sulphate crystals were so rare in nature, it might be easy to crystallize them from a mixed solution of their ingredients. It proved to be far from easy, but was accomplished by five days' digestion over a *bain-marie*. There were, then, two independent phenomena to be explained: (1) the isomorphism of the sulphate and chloride compounds; and (2), the difficulty of formation of the sulphate salt, with its consequent infrequency in nature.

We now pass to the physiological and anatomical papers. The very first memoir read was an elaborate piece of work by Dr. L. B. Mendel, who was introduced by Professor Chittenden. It related to the presence of Sucrase, Maltase, and Lactase in the tissues and liquids of pigs and dogs in several embryonic stages and in the breathing animal. The details, though interesting, would require too much explanation to be given here. The differences found at different stages of development doubtless depend upon such facts as that the embryo-muscle has no work to perform, and that the embryo does not so readily get rid of substances which it can neither absorb nor transform, as the adult does.

Dr. F. E. Beach, introduced by Professor Hastings, dealt with the errors of eccentricity and collimation of the human eye. He corrected certain errors of Helmholtz, and showed how they had arisen. The axis of distinct vision is inclined some 3° or 4° from the axis of the cornea, which has not the form of a portion of a spherical surface. A person looking into an eye which looks straight into his will see three reflections—one from the cornea, and two from the two surfaces of the crystalline lens. It was to the departures from the character of an ideal optical instrument which are betrayed by the locations of these reflections that Mr. Beach's measures and calculations related.

The paper of the session was unquestionably that of Prof. Edmund B. Wilson, who attacked one of the great traditional mysteries, the problem of sex-determination, and distinctly brought it one long march nearer to elucidation. His admirably clear

diagrams, drawings from microphotographs of wonderfully prepared specimens, showed groups of bodies known as chromosomes, which are found not only in the cells immediately concerned in fertilization, but also in the cells from which *these* cells are formed by reduction. The animals from which they were taken belonged to six different genera of bugs. Three of these genera have, in each cell of the ovarian follicles from which the egg-cells are formed, a fixed number of chromosomes. This number is even without being divisible by four (such as 14 or 22), consisting of an odd number of pairs, the chromosomes of each pair being alike in size and general appearance, while the different pairs differ more or less in these respects. In particular, two chromosomes, in every case, are vastly larger than any of the others. These two have hitherto been called the "accessory" chromosomes; but Professor Wilson, having proved the gross impropriety of this designation, renames them the "heterotropic" chromosomes. Exclusive of these two, the number of chromosomes is divisible by four (as 12 or 20). The corresponding cells in the male contain each one chromosome fewer (as 13 or 21), since they possess but one of the heterotropic kind. The ordinary chromosomes in the male correspond exactly, one to one, to those of the female. From each of the cells of which we have been speaking, is formed, in each sex, two cells of the kinds directly concerned in fertilization. In this process of division the two members of each matched pair of chromosomes separate and go, the one to one of the new cells, the other to the other. But since the cells of the male contain but one heterotropic chromosome, half of the new male cells contain one, and the other half none at all. In the act of fertilization, one male cell is absorbed in a female one, which thus comes to contain the chromosomes of both; namely, a number of ordinary chromosomes divisible by four, and either only one heterotropic chromosome, which is the characteristic of the male, or two of these, which is the characteristic of the female.

This is what happens in three of the genera examined. In the other three there is a slight difference, in that the original cells of the male, instead of containing ordinary chromosomes equal in number to those of the male together with a single chromosome which is a good deal larger, contain, beside all those, an additional chromosome which is a good deal smaller than the ordinary ones. This little chromosome acts like the mate to the big one, in that, in the division of the cell, it always goes to the opposite one of the new cells; that is, to that one of the new cells which the big one does not enter. If we leave the little chromosome out of account, the phenomena of these genera are just like those first described. Professor Wilson entertains no doubt that it is this second arrangement that is the primitive one. These facts seem to show that the determination of sex takes place at fertilization, wherein a signal addition is made to our knowledge of the subject. Still, Professor Wilson does not believe that the chromosomes are the direct determinants of sex, but rather that they are concomitants of that determination, which he thinks may be a matter of metabolism, perhaps of growth.

Mr. Agassiz, the President of the Academy, as usual wound up the session with one of his delightful papers, which are always followed without difficulty, and are always full of interest. It related to the various forms and functions assumed by the spines of sea-urchins. We have not mentioned three mathematical papers by Dr. Franz Boaz, Mr. C. S. Peirce, and Prof. Asaph Hall. Professor Hall's paper related to the calculation of the anomaly of Halley's, or any similar, comet.

The meeting was an exceptionally enjoyable one; and the New Haven members gave the Academy such a dinner as is not often offered to mere scientists.

THE BRITISH ASSOCIATION IN SOUTH AFRICA.—II.

HARVARD UNIVERSITY,
November 4, 1905.

The stay in Johannesburg was so actively employed that it was something of a relief to start away on the further journey. The main party made a brief stop at Bloemfontein, and then a long southward détour by rail to Kimberley, and there spent two days. A number of others "trekked" across the plains in slow wagons from Pretoria to Mafeking, to learn something of the open country far from the railway. A small geological party again separated from the others and went a day's journey northeastward to the Duivel's Kantoor (the Devil's Shop), a great promontory in the escarpment by which the interior highland breaks down toward the coast, affording "one of the finest views in South Africa." It was curious to find at this isolated spot a comfortable little hotel kept by a German (who shouted for joy when Penck changed from English to his own language in the second half of his after-dinner speech), and some small summer houses, refuges for those who can leave their homes on the coastal lower lands during the hot season. Returning to Johannesburg, we followed the main party around to Kimberley.

The railway journeys gave us abundant views of the broad, treeless, apparently unoccupied Veld in the Transvaal and the Orange River Colony. We had been told in Cape Town that this ride was monotonous and tiring, and so it truly might have been to travellers not interested in land forms; but, in the sympathetic company of our geological party, there was study and discussion of the plains all day long, for their origin seemed to involve curious changes in continental altitude or in climatic conditions, yet to be worked out. Moreover, on this and other railway journeys, we saw the broad country that the Boers had wrested from the natives, and that they had learned to occupy in somewhat patriarchal fashion. Each isolated homestead was usually determined by some convenient source of water supply; hence the frequent recurrence of names ending in *fontein* (spring), *spruit* (stream), *vlei* (hollow), *poort* (gap), and so on. There were small gardens near the houses, occasional small fields of "mealies" (maize) which supply a staple article of food for Boer and Kaffir, and plantations of gums (eucalyptus) and wattles (acacias) from Australia, for South Africa has been unsuccessful in the development of trees suitable to its dry climate; but the greater part of each estate was a vast uncultivated cattle range, where the herds and flocks are tended by natives, who live like serfs near their master's house. Here, dwelling in isolated and contented independence, rather indifferent to what outsiders call progress, and accustomed to a political system in which the local government of cities by their citizens had practically no place, the scattered Boers saw the rapid growth of the concentrated and aggressive mining population on the Rand, and a prolonged conflict was the natural, if not the inevitable, result. In what degree the Boer rulers were to blame for precipitating the conflict, I shall not presume to say; but it was a matter of regret to see that unsympathetic antagonism still exists between the scattered farmers and the crowded miners. We passed many battlefields and saw many traces of the war; blockhouses and rifle pits in various stages of obliteration, barbed-wire entanglements along parts of the railway line, ruined or rebuilt houses; and we heard much of the efforts made by the British to reëstablish the Boers on their farms. Vast sums of money have been spent under British control, chiefly on the reconstruction of railways and public works, but also on the repatriation of the farmers and on the restocking of their cattle ranges, the latter effort being greatly hindered by rinderpest and other diseases. Some of the money has been spent on the *Beiwohner* or hangers-on, the houseless Boers who, by misfortune, lack of thrift, or otherwise, have become a sort of "poor whites" in a country where the whites insist that they must dominate the blacks. As if in dread of the growth of such a class, great effort is made to give them means of becoming landlords.

Another problem that took our attention in the interior was the question of British immigration. Shall the stalwart young English farmer be encouraged to go out and plant his small capital and his small family in the Veld, in the hope of bettering the narrow condition that he leaves at home, and of opening up a wider future for his children? The opinion of the Association party was on the whole adverse to recommending such a venture; and this adverse judgment was supported by experts in agriculture and economics as well as by the "intelligent travellers." The mechanic may do well in the mining centres, and the man of larger means may succeed in the Veld, especially if he first learns to live at least as well as the Boers do, and does not insist on carrying out his home ideas in a dry country; but the small farmer **must** wait until irrigation is introduced on a large scale under Government control, and this has not thus far been shown to be feasible; until a kind of wheat can be developed that will be immune to rust during the summer rains, and no wheat of that kind is to be had at present; and until the many diseases of cattle and sheep can be controlled, and that happy day is not as yet. Until these difficult problems are solved, the young British farmer had better stop in the Cape Colony, near the coast, or go to Canada or New Zealand, and leave the Veld to the Boers and its vast emptiness.

It must be borne in mind that an important factor in the future of South Africa is the principle, widely proclaimed by Briton and Boer alike, that the white man must work only with his head, and leave manual labor to the natives. I do not believe that

this is surely a long-lived necessity in the more temperate parts of the Veld, and if difficulties as to irrigation, rust, and pests can be overcome, European working farmers will become much more numerous than they are now; but, for the present, the European who labors on a farm is thought by many to lower the dignity of his race! That such a public opinion exists should be sufficient to determine many a young laboring man to try his fortune in a more democratic colony. Yet it should be recorded that the Europeans, Boers or Britons, who are successfully established on large farms on the high interior plains, would not exchange their life for any other. It was hard for us to appreciate this feeling, for we saw the Veld in its dry season, when everything was dull and gray; but it must be remembered that the Association party was made up of dwellers in cities, who spend most of their lives within the walls of lecture-rooms and laboratories, and who therefore have little knowledge of the pleasures of life in the open. The Afrikander would probably be as little willing to exchange places with us as we with him; indeed, one whom we met said that he had been "home" the year before—"home" means Great Britain and especially England to Colonials (immigrants) and to Afrikanders (descendants of immigrants) alike—but he didn't like the country there; it was too much walled in, he didn't feel free to go about as he chose; indeed, Dartmoor was the only place where he was at ease, for there the open upland with its moors and tors reminded him of the high Veld with kopjes on it!

Kimberley was a less distracting city than Johannesburg, but not less interesting. Here, as on the Rand, American managers and engineers are numerous and influential; and the American manager of the DeBeers company, in which practically all of the Kimberley diamond mines are now consolidated, is something of a king. No sectional meetings were held there, and the two days were thus kept free for visits to the huge open pits and their deeper underground extensions. We saw one that was a good quarter mile in diameter at the top, had slanting walls for 300 or 400 feet down, then vertical walls in harder rock for 1,000 feet more, so that the bottom was out of sight from the surface rim; and yet underground work went on 1,000 feet deeper still, with no sign of reaching the base of the "pipe" of the famous diamond-bearing "blue ground"! We went also to the "floors" or fields, acres in extent, where the "blue ground" is spread out to soften under the weather with some aid from steam harrows; to the pulsators on which the gravel is gently shaken as it is washed down a sloping table faced with grease, which selects and holds the diamonds, large or small, while the worthless scraps pass on; to the diamond room, where a long table (back of a good railing and with silent, square-faced guards at either end) was decorated with heaps of gems, graded as to size and value, estimated to be worth £70,000, and awaiting purchase at such prices as the company is pleased to set; to the compounds, where the Kaffir miners live, an interesting spot for the anthropologist, as many native tribes are there represented; and to the suburban park, where the European employees are well-housed. There is no Chinese question at Kimberley; African laborers are found in sufficient number, and the importation of Chinese on the Rand is rather freely condemned.

The journey northward from Kimberley soon took us into Rhodesia, a vast interior region under the control of a chartered company which was organized by the genius of Cecil Rhodes, and which greatly misses and mourns for his inspiring leadership. We made a stop at Bulawayo, far within the empty country, and from there had a most interesting excursion to the Matopos, a group of granitic domes and knobs that surmount the high plains which, here as elsewhere, occupy so large a part of inner Africa. On the summit of a huge granite mass in the midst of the remote wilderness is the tomb of Cecil Rhodes; and here, on the ground of his great ambitions and in the memory of his great benefactions, we had to regret more than ever that his haste was so great as to lead him to give any countenance to such a filibustering expedition as Jameson's raid. The attempt to occupy this part of the South African interior is a very difficult venture. Part of the country is steppe land, part is covered with an open forest of medium-sized trees; all is dry in winter and flushed with occasional rains in summer. There are about 300,000 natives south of the Zambesi, and only 12,000 whites; yet a notice posted in the railway station at Johannesburg warned Europeans not to go to Rhodesia without capital. It is not a country in which white men work; the summers are too exhaustingly hot, the midday sun was beginning to be oppressive even at the time of our visit in early spring (September). An official told us candidly enough that, inasmuch as transportation charges were very heavy, and as the export of products (apart from metals) would therefore be commercially unsuccessful, the policy of the company was to develop the needs of the natives as to clothing, household utensils, and so on; the native then would be led to work more steadily than he does now, in order to get the money with which to satisfy his growing needs, and industry and trade would thereby prosper. As a commercial policy, this is commendable; but it was well pointed out by one of our party that, as needs are cultivated and satisfied, intelligence will increase; and with increasing intelligence there will be growing ambitions; and as intelligent ambitions are aroused, the blacks, numerically in great majority, may not be content to remain subordinate to the whites, as they now are.

Thus Rhodesia has a heavy native problem in the future, as it has a heavy financial problem in the present, with its shares below par and no dividends in sight. Its more immediate hope seems to be in its mines of copper and gold, as yet hardly opened, but said to be of value, and it is largely in view of their future that the railway, part of the almost visionary "Cape to Cairo" scheme, has been built northward from Bulawayo to and beyond the Zambesi River. Luckily, coal has been found at Wankie, where it is worked for engine fuel. Even to those who have seen our Western railroads in the deserts of Utah and Arizona, the construction of a line through the Bushveld or thin-forest country is a marvel, for while our roads go through to a rich Pacific coast, the Zambesi line ends in a wild region, with nothing to fetch and nothing to carry. I can hardly imagine a more agreeable disappointment than to learn that the railway, and indeed the whole territory of the chartered company, have become financially successful, for we were most generously treated during our days at Bulawayo, at Salisbury, the capital, and at Umtali farther east, as well as during our excursion to Victoria Falls on the Zambesi, the farthest point on our inland journey. There we attended the ceremony of opening the great bridge over the gorge below the Falls, and had the pleasure of crossing it in the first passenger train that reached the northern side. We rambled about for a day and a half near the superb Falls, descended into Palm Kloof, one of the side ravines, crossed to Livingstone Island above the Falls, and wandered through the "rain forest," where the spray supports a jungle quite unlike the growth of the neighboring Bushveld. Some of the party walked up the river and saw "hippos" and crocodiles; others walked down the valley to see the curious zigzags of the gorge, and all marvelled at the ease with which we had reached a spot that was on the remotest border of exploration when Livingstone saw it half a century ago.

On turning back from the Falls, our homeward journey was begun. About half of the party returned from Bulawayo to Cape Town and then by west-coast steamer to England direct; the other half came from Bulawayo through eastern Rhodesia, and descended across Portuguese East Africa to the coast of the Indian Ocean at Beira, there to embark and return by the Suez Canal and the Mediterranean. The Portuguese officials gave us a farewell lunch in the custom-house, a most artistic and charming affair, directly after which we went aboard the *Durham Castle* and steamed away on the afternoon of September 17, having been thirty-three days on land and having traversed nearly 3,000 miles by rail. The whole excursion was thoroughly planned and admirably carried out; it filled us all to overflowing with new impressions; and it gave the foreign guests in particular a view of British strength and heartiness, at home and in the colonies, that cannot be forgotten. The only untoward result likely to follow from this unrivalled opportunity is, as President Darwin pointed out in his remarks at our lunch in Umtali, that we shall make ourselves rather insufferable all through the coming winter by insisting on telling our South African experiences on all occasions, until our hearers cry, "Enough!" if not, indeed, "Too much!"

W. M. Davis.

THE RUSSIAN PEASANT.—I.

Sevastopol, October 16, 1905.

It is difficult for those who live in western Europe or in the eastern part of the United States to realize to what an extent Russia is still an agricultural nation, and to understand the significance of that fact. In Russia the large cities are few and far between, and, with the exception of Moscow, are almost all upon the extreme western or southern border of the Empire. Eight-tenths of the population is still to be found in detached villages of from 1,000 to 1,500 inhabitants, scattered over an area

much larger than that of the United States. Any speculation upon the political future of Russia will be futile if it does not take into proper account the nature of these village organizations (or "Mirs," as they are called), and the racial characteristics of the individuals who constitute them.

The Slavic population of Russia is divided into three branches, the Great Russian, the Little Russian, and the White Russian. Of these the Great Russian is by far predominant, numbering more than 40,000,000, and occupying the whole valley of the Volga, a large part of the basin of the Don, and extending westward to the Dnieper and Dvina Rivers. Tolstoy, with whose picture in peasant costume every one is familiar, is both physically and temperamentally the typical Great Russian. With his stalwart frame, his light brown hair and beard, his mild blue or gray eye, broad face and gentle expression, and his belted blouse overhanging his trousers, the Great Russian meets you everywhere in the kingdom. Not only in his original home, but in Vladivostok, throughout Siberia and Central Asia, on the shores of the Black Sea and of the Sea of Azov, he is sure to greet you with the offer of broad shoulders or of his swift droshky for the transportation of your luggage and your person.

The Little Russian, next in importance of the Slavic population, often has dark hair and dark eyes, supposed by some to have come through a slight intermixture of Tartar blood; but in general his characteristics are similar to those of his brothers in Great Russia. He is, however, cleaner in appearance and manner of living, and his villages show signs of greater prosperity. The Cossacks of the Don and the Ural are simply the frontiersmen of Russia, with such modifications as border life produces in all classes of people. They possess a military organization, which is extremely democratic, except in the appointment of its higher officers. Naturally they have come to be the chief dependence of the Government in preserving order throughout the Empire, their relation to the ordinary army of conscripts being something like that of our regular army to the State militia. We have much the same difficulty in the United States in suppressing disorders through the militia that Russia has through the regular army. In repeated instances our militia have refused to respond for the forcible suppression of disorders fomented by their fellow-citizens. The refusal of Russian troops to fire upon a mob, and the resort to the Cossacks as we resort to the regular army, are no new things in Russia.

Nothing can be more erroneous than the impression which is conveyed by picturing the Russian as a "bear," for, really, he is a gentle creature, overflowing with sympathy, and this is the basis of his most characteristic faults. Beggars are everywhere tolerated. They line the approaches to every church, and stretch out their appealing hands from every corner. Nor are they rudely thrust aside by any. Their very numbers indicate the consideration with which they are treated. The exile, as he starts for Siberia, is universally looked upon as more unfortunate than criminal, and is the recipient of many parting gifts. In Siberia itself the free settler ever leaves some bread and water outside his door that the fugitive from justice may find refreshment in his lonely night marches. It was in obedience to this sentimentality of the people at large that capital punishment was abolished in Russia 250 years ago. Since that time even the most hardened murderers have never been sentenced to more than twenty years in prison. The few executions which take place in Russia are under the extreme enforcement of martial law.

The whole penal system of Siberia has really sprung out of the same national sentimentalism. Exile to Siberia, with a speedy release from close confinement and a chance to retrieve one's fortune in a new country, has seemed to the nation more humane than summary execution or prolonged close confinement. However mistaken the policy may have been, the impulse leading to it has been generous rather than severe, while no one could well see beforehand the incidental evils which have been connected with it. Now that the policy is to be reversed, the first requisite is the erection of a large number of new local prisons, where it is doubtful if the unfortunate class will be any better off than they have been. It is interesting to note that Prince Kropotkin, upon being confined in an up-to-date French prison, emphatically declared that the general effect of the Siberian prison was better than that of the prisons of Western Europe.

The Russian neither hurries himself nor any one else. One of the most striking characteristics observed through many months' close association with him, first and last, has been the uniform kindness with which workmen are treated by overseers. A recent trip down the Mississippi upon a river steamboat revealed scenes of hard-heartedness and cruelty on the part of the overseers who were driving negro stevedores to the utmost limit of human endurance, shocking every sentiment of humanity. The harsh and rasping tones, the terrible profanity, and the repeated blows upon the backs of the overworked negroes, contrasted in a forcible manner with the patience observed everywhere here. The Anglo-Saxon overseer is a brute compared with the Russian. These feelings of sympathy found expression in a striking scene which I once witnessed in a group of children who had come out to slide upon some newly frozen ice, at the beginning of winter. A number of the children were barefooted, but those who had shoes, instead of monopolizing them entirely to their own benefit, at intervals took them off and lent them to their less fortunate companions.

Paradoxical as it may seem, one of the greatest hindrances to progress among the Russian peasantry is the amount of liberty retained by the village commune or Mir. Admirable in many respects as this organization is, it is looked upon by the most enlightened friends of Russia as one of the main obstacles to progress in the social and political condition of the Empire. The Mir either owns or rents the land which its individual members cultivate. Annually, by universal suffrage in which the women who are widows, or whose husbands are absent, take part, elders are elected whose duty it is to see that each family has its proper proportion of the land assigned to it. But, if there is any dissatisfaction, each individual has the right to call a public meeting and make a final appeal to the whole body of voters.

This communistic system is supposed by many to be the cause of the backward state of agriculture throughout Russia. Though this may be true in part, other causes conspire to the same result. The climatic conditions are such that high cultivation, such as is found in Central and Western Europe, is out of the question. The rainfall is meagre, and extensive irrigation impossible, while the season for the growth of crops is short. The peasant, therefore, must, in general, resort to a plan of raising a crop of grain (wheat, rye, or oats) one year, and allowing the land to lie fallow two years, and even then only succeeds in raising seventeen or eighteen bushels of wheat per acre. Upon a sale of a portion of this he must depend for his ready money.

But every house has its garden well stocked with cabbages and cucumbers and other vegetables, while the house itself, built of logs and covered with thatch, is admirably adapted to the conditions of life to which the peasant has become attached. It is warm in winter and cool in summer, and provided with a large brick oven in the principal room, which well conserves the heat furnished by the scanty supply of fuel. The furniture is simple, consisting of a few benches and rough bedsteads and a table. The oven itself also often serves the purpose of affording facilities for the weekly steam bath which every Russian is careful to take. In the winter the top of the oven is a favorite sleeping-place for the aged members of the family. After driving over a level and treeless prairie for many miles without seeing a single habitation, as one is ordinarily compelled to do, it is a pleasant experience to come suddenly upon a village of such houses, snugly ensconced beside some little stream which furnishes a convenient water supply. Life in these villages is certainly much less lonely than in the scattered habitations of our own Western prairies.

The Mir, again, has the right and responsibility of dealing with infractions both of the civil and the criminal laws up to a certain degree, and is permitted, as the ancient Greek communities were, to obstracize objectionable members. More than 50 per cent. of the exiles to Siberia have been sent there by vote of the village communities in which they lived. When such a vote is taken, the unfortunate member is turned over to the general Government and put under police surveillance in Siberia. Nor is a criminal who has been sentenced by the courts permitted to return to his commune except by general permission.

This responsibility of the Mir is, however, somewhat restricted by the fact that the votes are not effective until they are unanimous. Practically, however, they are always made unanimous as soon as a clear majority has been obtained. The direct and, on the whole, satisfactory way in which these village communes attain the ends of justice is well illustrated by a recent incident related to us by a friend who witnessed it. An illegitimate child had been born under some mitigating conditions which we need not mention. The Mir was assembled to see that justice was done as far as possible to all parties. After a fair amount of discussion, the unanimous decision was that the father of the child

should bind himself for its proper support through specified annual supplies furnished to the mother. This, of course, was to be expected. But it was followed by a vote which was as unexpected as it was salutary, namely, that whoever should hereafter make the matter a subject of gossip should be fined ten rubles (five dollars).

In other ways, also, such a pure democracy as is the Russian Mir must limit the freedom of its individual members, illustrating the too much neglected apothegm that the worst of all despotisms is that of an implacable majority. The Mir has certain common responsibilities which every individual shares. It owes to the general Government taxes and military service. This is essential to the maintenance of the unity of the Empire and to the fulfilment of all the higher aspirations of the Slavic race. Hence it comes about that the individual member of the Mir is not permitted to go and come as he likes; but, upon leaving home, he must give a pledge to his fellow-members that he will continue to bear his share of the common burdens, at least until the next census is taken. He must, therefore, secure leave of absence from them. This is the reason for that internal passport system which to outsiders seems so meddlesome and onerous, while, viewed in the light of the real equities of the case, it is perfectly fair and just, and is so considered by the mass of the Russian people. The great commercial and manufacturing centres of Russia are filled with peasants who have obtained temporary leave of absence from their Mirs for the purpose of improving their condition in these broader fields of activity. Often they continue for the rest of their lives to reside in the cities, while cheerfully paying their annual tax to the Mir. This, however, is not regarded as an imposition, but really as a payment to secure an old-age pension; for so long as they pay this tax they can, if business adversity overtakes them, return and be reinstated in all the rights of the village.

G. Frederick Wright.

Correspondence.

GRAFT.

To the Editor of The Nation:

Sir: In a speech delivered at Springfield, Ohio, during the recent political campaign, Gov. Folk of Missouri gave the following definition of a new word now in common use:

"The word 'graft' is of such recent origin that it is as yet undefined in the dictionaries in the sense in which it is now generally used. The boodler sells his official vote or buys official acts contrary to law. He is a grafter; but a grafter is not necessarily a boodler. Grafting may or may not be unlawful. It is either a special privilege exercised contrary to law or one that the law itself may give. Special privileges are grafts and should be hateful to all good citizens."

This is submitted by way of contribution to lexicography, emanating from the best authority.—Respectfully, M. W.

Annapolis, Md.

THE GENESIS OF GRAFT.

To the Editor of The Nation:

Sir: Certain experiences of the great High School in this city, one of the most important in the country, seem to me to furnish a highly valuable biological experiment in the genesis and development of political corruption-germs. They also throw light on the question suggested by the recent insurance investigations, and raised in your columns, as to which is prior in point of time, and therefore of blame—the blackmailing legislator who devises "strikes" to be bought off, or the corporations which systematically tempt the venality of legislators to procure legislation adverse to the interests of the public or of rivals; a question which otherwise might seem to be parallel with that of the first hen and the first egg, and in some sense is so, as a much-bought public body gradually becomes a subsistent organism, drawing its vital juices from the corruption dunghill.

In brief, the furnishing of class photographs for so large a school is a very valuable plum, in immediate money or in advertising, for a photographer who obtains the contract; and each student board which, year by year, is deputed to make that contract, finds itself at once approached with considerable bribes—fifty or a hundred dollars sometimes, and other valuable considerations. I do not assert that any single contract has been so gained, not even that the offered bribes have influenced the grant; simply that business firms regularly add to the official school curriculum another, of potential "graft," supposably to fit the ungrown youth for their coming careers of "practical politics." In this case there can be no question even of divided responsibility: the children never dreamed of farming out the contract to the highest briber, or of asking any gift as a condition of awarding it; the idea of turning it into a "graft" was absolutely put into their minds initially by firms willing to generate corruption for personal profit, or, more charitably, each fearing that a less scrupulous rival would do the generating and reap the profit, so that morality would be no better off and their own gain would be sacrificed—exactly the reason advanced by the Artful Dodger why Oliver Twist should pick the pockets of unwary strangers.

It seems to me obvious that such is the fact all through the non-political branches of business life. Do school boards of any sort usually begin their selection of text-books by secretly "touching" the publishers to see which will respond most liberally? Of course not; if bribes are ever taken, the firms make the first advances. Has the advertising or other contract agent of a company or firm, who may be caught pocketing commissions, usually been the original fountain of the evil suggestion? Not once in a hundred times; a bait, in general at first made morally plausible, has been hung out which his *res angustæ* or ambition, or perhaps affection, had not strength enough to resist. I fully believe that the same is true in the beginning altogether, and even at the last to a great extent, of political venality: most officials are chosen from the decent classes, are decent men at the outset, and are gradually debauched by the moneyed interests bidding against each other for special legislation. I know quite well to what depths of shameless and brazen corruption such men or bodies can at last descend. I know corporations are given the choice sometimes perhaps of life or death, often of prosperity or great struggle, of success or failure in competition, through buying or not an official board of whom it would be as ludicrous to say that the corporation is corrupting them, as to accuse a Circassian who sells the Sultan's agent his 337th concubine of tempting the Sultan to bigamy. But I am convinced that the perpetual stream of new corruptionists poured into public life, of men at least technically honest turned into rogues in grain, is created outright by a large part at least of the very interests that wail over their completed work, and lament that they can get no public action without buying the public representatives.

This said, may I have permission to add—from knowledge a decade old, but hardly obsolete—that I believe the insurance companies to be among the least of the sinners with regard to initial legislative corruption? I say nothing of municipal affairs, where their interests are only as property holders, and where they are doubtless neither better nor worse than other large owners; I speak only of general legislation. It is almost impossible to make a law which shall add to the running profits of legitimate insurance companies, and I do not remember any such law ever made or sought, though they have been made in shoals for illegitimate ones to defraud the public—for members of "Iron Halls" and "endowment bond" societies to pick each other's pockets while a few sharper scoundrels picked those of the whole, for the freeing of the masses of rotten assessment societies from public accountability or from the obligation of carrying funds to make good the promises on which they have lured in the public, and so on. But the possibilities of legislation to *harm* not only the general business of insurance, but the direct money interests of policyholders, are infinite, and the actual measures to harass them are pretty nearly so. Valued-policy laws, raising the price of fire insurance for all in order to give each a gambler's chance to turn indemnity into a profitable speculation; laws against making suicide a ground of forfeiture, equally robbing the mass of honest, mediocre people to make the family of a coward (often a plunger at the end of his rope) immensely rich by enabling him to turn the mortality chance into a certainty against the remaining policyholders; demagogue "nigger laws," so styled, to prevent charging colored men more than white—exactly like forbidding a bank to discount a negro trader's note at a higher rate than a white man's; special sectional protective burdens laid on far-off companies, to dragoon people into patronizing those near by; thrifty securing of costly public works by loading the cost upon the insurance companies—the beautiful $3,300,000 Connecticut Capitol and grounds were paid for, every dollar, by a special insurance tax, most of it recharged against the policyholders' "dividends" in the mutual companies; "insurance departments" in many petty States, with no special insurance inter-

ests to safeguard, operated as political plums at the expense of the companies, and endowed with the power of making or threatening constant "examinations" which are merely blackmailing raids, so understood by both parties and often bought off as such—these are only a few of the actual assaults, on the broadest scale, upon the companies as large moneyed institutions. If the companies called down these "strikes" upon themselves, they were singularly inept in warding them off. As to injurious measures threatened by regularly organized blackmailing lobbies, they swarm at every session, or used to, and I do not believe the old order has changed. In a word, the companies want no special legislation, and could not profit by it; the strikers wish it against the companies to extort ransom. Is it not clear that the latter in this case are the ones who began and begin the game of corruption, and force the companies to maintain protective lobbies?—Very truly yours,

FORREST MORGAN.

HARTFORD, CONN., November 14, 1905.

TONE IN PUBLIC OFFICIALS.

TO THE EDITOR OF THE NATION:

SIR: In the spring of 1863, the banking house of Jay Cooke & Co., of Philadelphia, was made a loan agency for the national Government, receiving a commission of one-eighth per cent. on all loans made. Since the loans of the next few months aggregated over $75,000,000, the profits accruing to the house may be imagined. Jay Cooke purchased in June 300 shares of Erie Railway stock in the name of the Secretary of the Treasury, Salmon P. Chase. Within three weeks, the stock had cleared $4,200, and Mr. Cooke sent a check for this amount to Mr. Chase as profit. It was precisely such a transaction as seems to have become common in these days. But Mr. Chase returned the check to Cooke with these words: "In order to be able to render the most efficient service to our country, it is essential for me to *be* right as well as to *seem* right, and to *seem* right as well as to *be* right."

EDWIN E. SPARKS.

UNIVERSITY OF CHICAGO, November 14, 1905.

THE CASE OF PROFESSOR MITCHELL.

TO THE EDITOR OF THE NATION:

SIR: Professor Mitchell's retirement from the theological faculty of Boston University is not by the Trustees' dismissal, as was stated in your recent editorial, but by their forced relinquishment. The University does not question his teachings or his character. On the contrary, the Trustees have done their utmost to retain him. The circumstances compelling his withdrawal are few and plain. They should be understood by all persons interested in academic freedom.

Professor Mitchell was appointed to the chair of Semitic languages in 1900 for a five-year term—the longest permissible; consequently, the question of his reappointment came before the Trustees this year. Without hesitation they reëlected him for another five-year term.

Now, by a statute of the University, an election to a theological chair, unlike all other appointments, must be confirmed by two bishops of the Methodist Episcopal Church. By a recent order of the highest governing body of this Church—the General Conference—such an election in any theological school recognized by the Church can be confirmed by the bishops only upon a majority vote. Consequently, Professor Mitchell's appointment, when submitted by the Trustees to the bishops last spring, could be confirmed not by any two of the board as contemplated in the statutes, but only by a majority.

As the requisite majority was not willing to confirm the appointment, the bishops courteously returned Professor Mitchell's name without action, together with some reasons for their unwillingness. These were conveyed in form of a report of a committee of their number, appointed to investigate certain charges against Professor Mitchell's teachings.

The Board of Trustees then renewed with urgency its request for confirmation. The bishops replied that their earlier action in returning the name was equivalent to a refusal to confirm, and that they did not consider themselves at liberty to reopen the question of Professor Mitchell's confirmation.

Under the University's statutes the Trustees, since this final action, have had no alternative. They have not dismissed Professor Mitchell. On the contrary, they have twice requested that their reëlection of him receive confirmation.

In justice to the Trustees and to the spirit of the school, the responsibility for Professor Mitchell's retirement should be placed where it belongs—with the board of bishops. Your editorial sympathy with Professor Mitchell will, I feel confident, in the light of these facts, extend also to one of his warmest friends—the University that deplores his loss.

WILLARD T. PERRIN.

BOSTON, November 15, 1905.

THE OHIO CORONER.

TO THE EDITOR OF THE NATION:

SIR: May I call your attention to the injustice which may be wrought in full conformity to the laws of the State of Ohio? On Thursday, the 2d of November, the coroner of Knox County in this State began an inquest into the death of Stuart L. Pierson, a student of Kenyon College, who was killed by a train on the night of the 28th of October. He chose to sit without a jury, as is permissible under Ohio law, and he chose, moreover, to sit behind closed doors, excluding even the lawyer who represented Kenyon College and the D. K. E. fraternity, the witnesses most concerned in the investigation. For a week the daily papers were filled with false and sensational rumors, which purported to emanate from this secret tribunal. On the 11th of November the coroner published his verdict, finding that Stuart Pierson was tied to the railroad track by person or persons unknown. No testimony was then, or has since been, filed in support of this verdict, which thus stands as the arbitrary dictum of a petty official.

Upon this unsupported assertion Kenyon College and its students have been condemned by the press throughout the country, and censure and abuse have been heaped upon a college which for a record of noble accomplishment has few equals and no superiors west of the Alleghenies. Are we living under an autocracy, that one man's word carries such weight?

Very sincerely yours,

WILLIAM F. PEIRCE,
President of Kenyon College.

GAMBIER, OHIO, November 18, 1905.

KEATS IMPROVED.

TO THE EDITOR OF THE NATION:

SIR: The November number of *Modern Language Notes* contains a delightful illustration of philology minus imagination. It is too good to keep.

The article, or communication, in which it is to be found is entitled "A New Reading in *The Eve of St. Agnes*." The writer, who is an instructor in English in an Eastern university, ventures the opinion that, in the admired line,

"Clasp'd like a missal where swart Paynims pray,"

the true reading of the last word is not "pray," but "prey." Keats's spelling, he says, was not infallible; Keats in other places was guilty of "tripple," "plummes," "deamons," and similar errors. He might, therefore, have written "pray" when he intended "prey." Two interpretations of the line thus becoming possible, which of them shall we choose? I quote the writer's answer:

"If we are to imagine the missal as 'doubly cherished for the danger' (Leigh Hunt), the danger from marauding Paynims will surely be greater than that from Paynims who simply say their prayers. And in the romantic epics of chivalry, of which Keats had imbibed the spirit, the characteristic of the Paynims is not their piety, but precisely their preying upon Christian knight and lady."

Nothing could be more convincing. The only complaint which one can lodge against such reasoning is that it does not go far enough. For my part I am convinced that the line as Keats originally wrote it ran as follows:

"Grasp'd like a missile where swart Paynims prey."

Every schoolboy knows that *gr*, rapidly written, tends to degenerate into *cl* or something like it, through the decaudalization of the *g* and the compensatory protension of the *r*. *Missal* for *missile* is just the sort of thing we might expect of Keats. And what could be more characteristic of swart Paynims than the grasping of missiles? So there you are. "Give me an ounce of civet, good apothecary, to sweeten my imagination."

PHILOLOGUS.

Notes.

A. S. Barnes & Co. will publish immediately 'Seashore Life,' the invertebrates of the New York and adjacent coasts, by Dr. Alfred G. Mayer, with the author's illustrations drawn from the New York Aquarium and elsewhere.

A new 'Dictionary of German Quotations' is promised by Macmillan.

The correspondence between Wilhelm von Humboldt and his wife Caroline, which has all these years been guarded as a sacred family treasure, is to be published in the near future. Humboldt's great-granddaughter, Frau von Sydow, already favorably known as the author of the biography

of Gabriele von Bülow, will edit this correspondence. A beginning will be made with the publication of the letters exchanged between the engagement and the marriage of the two writers; and these letters are of special interest because of the accounts and discussions of such prominent contemporaries as Goethe, Schiller, Charlotte von Lengenfeld, Henriette Herz, Dorothea Veit, Therese Forster, and others. The first volume is to make its appearance before Christmas. The publishers are Mittler & Sohn of Berlin.

The text of Dr. Thwaites's superb reprint of Lewis and Clark's Journals (Dodd, Mead & Co.) reaches its conclusion with volume vii., of which the main pieces are the original journals of Sergeant Charles Floyd and Joseph Whitehouse, the latter quite extended and a by no means superfluous addition to the narrative of the chiefs. It ends with the arrival on the Pacific Coast. An appendix of matter relating to the expedition, largely composed of correspondence between Jefferson and his lieutenants, will be found good reading, and much of it is now published for the first time, such as the "Inquiries relitive to the *Indians* of Louisiana," from Clark's papers—apparently a copy of Jefferson's instructions, *e. g.:* "What is the State of the pulse in both Sexes, Children, grown persons, and in old age, by feeling the Pulse Morning, Noon & Night &c.?" The Atlas now alone remains to complete the monument.

Dr. Holmes's 'One Hoss Shay,' together with "How the Old Horse Won" and "The Broomstick Train," reappears with illustrations by Howard Pyle, but redrawn in color (Houghton, Mifflin & Co.). The effect is quaint and pleasing, though we think the artist, like the poet, has succeeded least well with the latest narrative, that of the trolley; yet even here one or two of the vignettes are as good as any in the series.

Mr. Luther S. Livingston's 'Auction Prices of Books, 1886-1904' (Dodd, Mead & Co.) terminates with the fourth volume—Richardson to Zwingli. Its field, we may remind our readers, is English and American. An author allied with both nations, Capt. John Smith, would be called, in current slang, one of the best sellers of the day. Four sales of his 'General History of Virginia' (1624) brought $1,800 in 1879, £605 in 1886, $1,900 in 1890, and £204 in 1896. Even his quarto Map of Virginia (1612) fetched £120 in 1902. Shakspere sales require 29 pages, Thackeray 11, Scott 10, Shelley 9, Ruskin and Tennyson 8, Stevenson and Izaak Walton 7, Swinburne 5, Wordsworth 3—fair measures of each cult. The American contingent is unmarked by notable prices. Mrs. Stowe tempted no one above $46, Thoreau above $78; but Whitman's 'Leaves of Grass,' with attending autographic accidents, obtained a bid of £35. In spite of the genealogical mania, Savage's four-volume 'Genealogical Dictionary,' *fons et origo* of research, brought at most $76. Sibley's 'Harvard Biographies' in three volumes, an inexhaustible browsing-ground of delight to the antiquarian, went for $15. D. G. Rossetti's proof-sheets and some manuscript attached were valued above any of his books save one. Rousseau in English never rose above four pounds.

The eleven volumes of Stedman and Hutchinson's 'Library of American Literature' within ten years of publication were, by Mr. Livingston's exhibition, valued at $22 and $12.10, and in 1902 at $11 and $5.50. With this may be compared the fate of the National Dictionary of Biography during the past season of 1904-5, as shown in Mr. J. H. Slater's 'Book Prices Current' (London: Elliot Stock). This inestimable work in 67 to 69 volumes was procurable under the hammer at £35 to £48. The moral agrees with that pointed by Mr. Slater in his preface, apropos of the prevailing low average apart from the rare and much sought-for prizes. In other words, moderate purses stand a pretty good chance of a bargain in auction-rooms. The climax of the year was the £4,000 paid for the Mentz Psalter of 1459. Shakspere's 'Titus Andronicus' (the Shakspere reappearances were striking) stood the purchaser in £2,000. Mr. Slater has helpfully consolidated his indexes, subject, and author.

A well-printed volume of 336 pages, just to hand, contains the Records of the Town of Hanover, New Hampshire, from 1761 to 1818. It owes its existence to a vote of the town and to the labors of some of the townspeople, of whom there deserves to be mentioned Miss Laura Woolsey Lord, who has furnished a full index of persons, subjects and places. There are a few quaint entries. The election of "deeriffs" reminds one of the Provincial Law of 14 George II., which required each town to "choose two proper persons to inspect and search any house or place where deer may be killed or hid." A curious custom it was to enter in the town records "Notices" relating to horses breaking into inclosures. A dark sorrel mare that troubled Mr. Jesse Dewey was, it seems, "a natureal troter" (p. 190). In fact, most of these carelessly behaving steeds appear to have been "natural trotters." We suspect that Dartmouth College has not been without its influence in bringing about the printing of these Records; a step wisely taken, and one to be widely imitated in time, we trust.

Mr. H. Noel Williams adds to his studies of notable French dames a set of biographical essays entitled 'Queens of the French Stage' (Scribners), which cover the period from Louis XIV. to the Revolution, beginning with Armande Béjart (Molière's wife) and ending with the celebrated, and notorious, Clairon. To the histrionic distinction of La Champmeslé, Adrienne Lecouvreur, and Madame Favart, the biographer does such justice as can be gathered from contemporary criticism or rhapsody, supplying at the same time for the average reader a liberal spice of piquancy in the traditionally ample record of love adventures. One may hazard a doubt whether this element would have received like emphasis had the frail ones been English women. However, the volume is readable, and accurate in most matters save that of French quotations, in which elementary blunders are altogether too frequent. The illustrations are of unequal merit and interest.

Spain has evidently been rediscovered. The days of Ford and Borrow have returned, and the voice of the tourist is again heard in the land. Yet it would be unjust to sweep into the latter blatant class Mr. Rowland Thirlmere, with his two-volume illustrated 'Letters from Catalonia and Other Parts of Spain' (Brentano's). His prototype, rather, is the mild grace and sympathetic art of Longfellow's 'Hyperion.' It is true that he is neither so graceful nor gracious nor artistic in form, but the sympathetic personal note and the flavor of phrase are the same. He is at home, too, in Spain, has known it before, and has access to its family life. So his talk is not all of dinners and hotels and journeys, though there is more of that than need be. Originally a series of letters home, the book would be indefinitely improved by reduction to one-half its length, and reconstruction in simpler, less multitudinous form. There are many telling situations which Longfellow or Sterne would gladly have handled, but they need to be cleared from the mass of a traveller's jottage and given air and space. Yet those philosophic readers who will be content to let the pages pass and the writer talk of this and that, will have their reward. The spell of Spain will be on them; an old land of memories and sorrows, but with a people still of blood and brain. For them, through and over all the petty wealth of English names dragged in and the shower of allusions of the day, the ghost of the past and the spirit of the present and the future will rise, and one will understand why the writer loved Spain and lingered over her thus garrulously. The illustrations, too, are of the same type—very numerous, by many hands, and only occasionally rising into excellence. But the whole book undoubtedly has character and reality, a record of such sensations, impressions and ideas as lead to essential truth.

Among autobiographers and diarists the Emperor Baber holds an honorable, probably as a ruler, a unique place. And his work has had the fate of most such semi-confidential productions in an uncertain existence and slow publication. Written originally in Turki, or Chaghatay-Turkish, it was made more broadly accessible in Persian, but from an incomplete manuscript. The first version into a Western language was begun by the too early lost John Leyden—of the 'Border Minstrelsy' and Scott's eloquent lament—one of the pioneers of Indian studies in the first decade of last century. Others more perfect followed slowly, with a print of the original text in 1857. Now Mrs. A. S. Beveridge publishes as the first volume in the E. J. W. Gibb memorial series a zincograph facsimile of a Turki MS., which she believes to be a direct copy from Baber's autograph (London: Quaritch). No series could be begun more auspiciously, or with a more carefully handled text. The amount of labor in the photographic reproduction has been enormous, but the result is most happy. There is an elaborate historical index on the model of that of the 'Aghani,' and an introduction abbreviated from Mrs. Beveridge's three articles in the Journal of the Royal Asiatic Society. It may be doubted if there is any library in this country which specializes in Chaghatay-Turkish texts, but there are few of our large libraries which can afford to lack this basal edition of Baber's great work.

The keeper of the valuable archives at Lucca, Luigi Fumi, has been cataloguing the papers and has begun publication of the

more important ones. His first volume gives valuable information regarding the correspondence of the little republic of Lucca from 1333 through the fourteenth century. It includes all the letters of the Anziani, who were at the head of the Government during that period. He supplies the dates from other sources, when lacking in the originals, stating from whence each was sent and its destination, points out the significance of each letter, adds an abstract of its contents, and in some cases quotes the most noteworthy passages. The letters throw light on the history not only of Lucca, but of Tuscany and all Italy, during the years embraced, but are especially valuable for the reports which the merchants of Lucca sent back from many towns in Italy and other countries of conditions which they observed, and incidentally of the relations of those places with the Government of Lucca. The work has full indexes, both chronological and alphabetical, and receives great praise from such an authority as the *Rivista d'Italia*.

The ninth volume (1905) of the *Harvard Oriental Series* contains Dr. A. W. Ryder's admirable translation of the "Maricchakatika," or "Little Clay Cart," an early Sanskrit comedy ascribed to "King Shūdraka." The translation, based on Parab's text, will naturally supersede those of Wilson and Böhtlingk. It is marked by neat metrical renderings and a partially successful effort to imitate the effect of Hindu dialect as used on the stage. No effort is made to fix the date of the author—surely a mistake. The general student, after reading the translator's careful appraisement of the drama—a good literary study—will certainly ask whether in Dr. Ryder's opinion "Shūdraka" lived before or after Kālidāsa (the author of "Shakuntalā"); but he is not even told that the author may have been Dandin instead of "King Shūdraka"; nor is it suggested that he may have lived in the sixth century A. D. In Sanskrit literature a guess is as good as a hit elsewhere, and the bare statement that we are "curiously ignorant," with a reference to a book on the drama published fifteen years ago, will scarcely satisfy any reader. One who has thoroughly worked himself into this kind of literature is just the one to express an opinion which others would be glad to hear. The fact that the comedy's author, whoever he was, ignores the canons of dramatic composition, indicates at least that he antedates them, and gives weight to the theory that we have in the "Wagonette" the earliest extant Hindu comedy.

A cordial welcome should be extended to the *Journal of the Siam Society*, the first volume of which, published at Bangkok, was issued in August of this year. The secretary, well-known to Indologists, is Dr. Frankfurter, who in this number describes the aims of the new Siam Society. Col. Gerini's article on Siamese proverbs will interest a large circle. Some of them are identical even in form with Western proverbs, as are many in thought. The writer compares a few with Sanskrit proverbs (borrowed from India), to which he might have added: "Don't despise a king, a fire, and a snake." H. R. H. Prince Damrong contributes a paper (translated by Dr. Frankfurter) on the foundation of Ayuthia, and Dr. Frankfurter gives a brief history of King Mongkut. The *Journal* may be had of Luzac in England or Harrassowitz in Germany.

A sign of the progress recently made by the study of foreign tongues in England is the launching of a new quarterly journal, the *Modern Language Review*, the first number of which appeared in October. It is edited by Prof. John G. Robertson, who may be addressed at 5 Lyon Road, Harrow. There is an Advisory Board of sixteen eminent scholars. The subscription price is eight shillings, but the periodical is sent free to members of the English Modern Language Association—just as, in this country, the *Publications* are received by members of the Modern Language Association of America. The *Review* covers a large field, being "devoted to the study of mediæval and modern literature and philology." It comprises not only original articles, but also notices of new books and a list of current publications. In this respect it differs from our *Publications* and *Modern Philology*, and resembles our *Modern Language Notes*. This feature will be useful, if competent men continue to find leisure to do the work. The first number, though not bulky, promises well for the future. In addition to some excellent book reviews and a helpful bibliography, it contains half a dozen short studies by such distinguished experts as Paget Toynbee, A. C. Bradley, and others. The new venture may be assured of a cordial welcome from colleagues across the sea.

Parts 19-28 of Meyers's Hand-Atlas (Lemcke & Buechner) bring this enterprise to a close for the edition without an index, which fills twelve parts besides. A very clear, handsome, and convenient duodecimo atlas brought up to date is thus made available for the library shelf or table. These last instalments have a large number of maps of immediate political interest, such as the double plate exhibiting southern Mantchuria and the countries adjacent to the Yellow Sea, with side maps of Liaoyang-Mukden-Harbin, showing the battle-lines; the Scandinavian sheet; Russia's Baltic Sea provinces; Hungary; Persia; Turkey in Europe, etc. For our hemisphere there are maps of South America, Mexico, and part of the United States.

The interest in the late Rear-Admiral Wharton's address at Johannesburg before the British Association, republished in the *National Geographical Magazine* for November, lies in the fact that he treats geography from the point of view of a sailor. Naturally he lays particular stress on the contributions to our knowledge of the globe through marine surveys, especially the British. There is an interesting notice of 'Explorations in Turkestan' published by the Carnegie Institution, from which it is evident that archæological excavations there will throw light on the origin of Western and Eastern civilization. Among the miscellaneous contents are extracts from President Roosevelt's addresses during his Southern tour on forest preservation and the Chinese boycott, and a summary of Prof. W. L. Fleming's investigations as to immigration to the Southern States.

The *Geographical Journal* for November opens with an entertaining description of the Nile Province in Uganda, by Lieut.-Col. Delmé-Radcliffe, its physical features and the natives. Many of these are cultivators of the land, and all, having acquired confidence in their rulers, "give the Administration no trouble." They remember Emin Pasha well, but regard him with indifference or dislike. "Sir Samuel and Lady Baker, however, seem to have inspired the natives everywhere with the greatest possible affection. They never ceased to tell us wonderful stories of the doings of 'Murrdu,' or Lion's-mane, as they called Sir Samuel, and of 'Anyadue,' or Daughter of the Moon, which is their name for Lady Baker." A brief reference is made to the canalization scheme of Sir William Garstein, which, if carried out, will not only largely increase the water supply of Egypt and improve the navigability of the Nile, but will reclaim millions of acres of good soil from the swamps. As wild cotton plants are to be found there with pods well filled with long-staple cotton, it seems highly probable that this fibre may be grown profitably and on a large scale. Other articles are on the French Antarctic expedition by its leader, Dr. Jean Charcot, in which we note the statement that polar auroras were very rare and faint.

Petermann's Mitteilungen, number nine, contains the principal facts relative to the geology, topography, and natural history of Montenegro obtained by the recent Italian mission to that country. Other subjects treated are fords, a remarkable cloudburst in the valley of the Rhine, and the best route for a railway connecting Kamtchatka with Europe. This is called out by the suggestion of the American-Pacific Railway through Alaska to Bering's Straits.

The magnificent new library building of the University of Heidelberg has just been opened; it contains some 450,000 volumes. A noteworthy innovation in this structure is the fact that none of the stories are higher than 2½ metres, so that the upper tier of books can readily be reached by anybody.

Lemcke & Buechner send us the familiar "Münchener Kalender" for 1906, with the customary colored display of arms, led off by those of Pius X. At the end is a list of such as have been reproduced since 1895, of German States, counts and princes.

A prize for the best essay on "Moral Training in Public Schools"—$500 for the best, $300 for the second best—is anonymously offered in California. The judges will be the Rev. Charles R. Brown of Oakland, President Jordan of Stanford University, and Prof. F. B. Dresslar of the University of California, Berkeley. The favored essays will be published and circulated by the trustees of the fund. They must be presented not later than June 1, 1906, must be typewritten, and contain not less than 6,000 nor more than 12,000 words.

—The following letter having appeared in the *Evening Post* of November 15, the Editor of the *Nation* must again share his surprise with his own readers, and acknowledge afresh, for himself and his posterity, that good will and esteem on the part of his colaborers which has embalmed itself in such beautiful and precious tokens:

To the Editor of The Evening Post:

Sir: On the 6th of July a silver lamp of Grecian pattern was presented to Mr. W. P. Garrison in commemoration of his fortieth year of service in the editorship of the *Nation*. This was accompanied by a congratulatory address signed by many contributors to the *Nation*. Since that date many belated signatures and contributions have been received, together with expres-

sions so cordial and enthusiastic that it seemed difficult and ungracious to return the gifts. Accordingly, Mr. Russell Sturgis, to whose taste and friendly interest the committee are much indebted, suggested the felicitous idea of adding to the lamp a silver plinth or base, which should serve at the same time as a coffer to contain the address and signatures. He furnished the design for this to Tiffanys, and the memorial token is now complete. For obvious reasons the committee think it proper to render this account to the subscribers, and at the same time to absolve themselves from further duty.

WILLIAM ROSCOE THAYER,
J. H. MCDANIELS,
Committee.

November 13, 1905.

—An *édition de luxe* of a writer of "current fiction" may be taken as a measure of his popularity, if not always of his literary importance. Maurice Hewlett has attained the distinction of such an edition (The Macmillan Co.); and, since there can be no doubt that his work deserves it, it is pleasant to know that his popularity demands it. He is a story-teller rather than a novelist, and his tales are mostly old old tales of the world's youth. When he opens the gates of an enchanted and enchanting garden, we moderns may enter in and at once fall under a spell that will last as long as he chooses to hold us. The first volume of the new edition, 'Forest Lovers,' is, we think, his earliest volume of fiction, certainly that by which he became known beyond a circumscribed scholarly circle. In the first chapter he declares his position towards the art of story-telling, a position that he has faithfully maintained: "I hope you will not ask me what it all means, or what the moral is. I rank myself with the historian in this business of tale-telling, and consider that my whole affair is to hunt the argument dispassionately. Your romancer must be neither a lover of his heroine, nor (as the fashion now sets) of his chief rascal. He must affect a genial height, that of a jigger of strings; and his attitude should be that of the Pulpiteer!—Heaven help you, gentlemen, but I know what is best for you! Leave everything to me." The second volume to reach us is his 'Richard Yea-and-Nay,' and the third, "Little Novels of Italy.' They are green and gold octavos of stately appearance.

—We had occasion last spring to notice two numbers of an interesting book by Mr. Bruce J. Home, in which, with little text and with plates of folio size, the old houses of Edinburgh were treated in a way at least partially worthy of their inherent interest. We are in receipt from the publisher, William J. Hay, of Edinburgh, of seven more parts, completing the first volume with title-page and table of contents. In this volume there are altogether twenty-seven plates, three to a part, illustrating sixteen different subjects, either a house or a "close"—that is, a court or narrow passageway, generally without exit. Probably the term "close" implies, in every case, a *cul-de-sac* or No Thoroughfare; but improvements continually going on have opened up the rear end of this or that closed court and made a thoroughfare, however small and humble—a wynd or throughgang, in short—of what was once a mere yard. These courts, however named, the student will look for in vain in the maps given with the guide-books, even the most expensive. They are considered private property. One of them is not more likely to be laid down upon a street-plan of Edinburgh than a front area or a back yard in a plan of New York. The reader will note in the text of Mr. Home's book that Plainstane Close, Gosford's Close, Bakehouse Close, and the rest are spoken of as if they were apart from the public ways of the town, even though separate dwellings have their entrance doors opening upon them. Accordingly, many a six-story or eight-story house is still in place, stone-built and spirited enough in its architectural character, and yet in undress, so to speak. Its front has not been treated with the ceremony commonly allowed to façades upon eighty-foot avenues, and it is just that character of large and somewhat careless design which these drawings render very perfectly. The style of the drawings themselves is also large and simple, as befits the worthy and unpretending old structure. The second volume is not yet announced, but there is reason to believe that it will follow closely upon the present one. The rapid disappearance of these precious relics of a more straightforward and self-centred art than our own is alone sufficient to warrant a completion of the work, even if it should include every fine old house in Edinburgh.

—Such a title as 'The Cathedrals of England and Wales' is hardly distinctive nowadays, nor is it perfectly descriptive, either, in the case of the book with the above title recently received from James Pott & Co. (London: T. Werner Laurie). The student who expected to find in it any historical account of the buildings and the sees would be disappointed on examination; in like manner it is a little surprising to find no plans of the buildings, either alone or with their dependent structures, and only a small photograph (or in one case three photographs) of any cathedral. The book is devoted to the vigorous expression of strong personal feelings cherished by the author, Mr. T. Francis Bumpus, who is a student of architectural art in many of its forms. He is also an enthusiastic lover of church music, and cherishes the traditions of the English foundation in these matters of stately choral service. Accordingly, the chapters of the book are taken up with comments upon restoration and—what is hardly worse—destruction in the past, and admiring comment upon work done to save what is old and fine. Sometimes he is led into very minute details, as when (p. 197) we meet this grave statement concerning Worcester Cathedral: "A pleasing change has been made of late years in the choir vestments of the boys, scarlet cassocks having been substituted for the black ones usually worn in our minsters." Immediately following it is this paragraph: "While the choir was in course of rearrangement, the altar, with a curious disregard for orientation, was set up at the west end of the nave, which had been temporarily fitted for service." And yet it would not be fair to the author to bid any one judge his book by these statements of minor matters—minor except to the local antiquaries—for indeed the book has all the marks of close observation and a real knowledge of what is and what is not good art and good archæology. There is an introductory sketch with four illustrations bound up in it, and this deals with the work of the men who have been most prominent in church archæology in England—Rickman, John Henry Parker, Britton the engraver, A. W. Pugin, the Rev. J. L. Petit, and others. In short, if one knows something about English architecture and the Gothic revival, he will be put upon the track of much wider knowledge, and will have his deeper sympathies stirred by this very intelligent little treatise; although certainly it is addressed in the first place to Englishmen and to Anglicans. Nine cathedrals are treated in the text; but a slip laid between the leaves announces Volume II. as intended to contain notice of nineteen cathedrals more.

—'Versailles and the Court under Louis XIV.,' by Mr. J. E. Farmer (The Century Co.), will for a good many readers answer a question which it is not unintelligent to ask. Why, it must often have been queried, did Louis XIV. leave the Louvre for Versailles? If he desired simply a sylvan retreat within the neighborhood of the capital, and a retreat where beauty of architecture could be had in conjunction with beauty of nature, why did he not betake himself, like his immediate predecessors, to Fontainebleau? Certain it is that Fontainebleau delights large numbers of the fastidious who actually revolt at the gaudy grandeur of Versailles. Louis XIV.'s great palace, however, stands for an idea, and it is the merit of Mr. Farmer's book to interpret that idea with clearness and a true sense of historical relationship. The French monarchy having, by the death of Mazarin, reached a point where absolutism could be flaunted in the face of the nation, the most ambitious and spectacular of French kings desired to possess a palace wherein he could be supreme with all the supremacy of the sun in heaven. Versailles, therefore, was created to be the centre of a state cult, a court Zoroastrianism. The conception may seem ignoble now, but it furnished an ideal which French society reacted to spontaneously for nearly two generations, and did not revolt against for more than a century. We lay some stress upon the idea for which Versailles stands, because it furnishes Mr. Farmer with the central and controlling motive of his book. Using Saint-Simon and the host of lesser memoir writers, the mere compiler is always able, with a minimum of effort, to turn out volume after volume upon the Court of Louis XIV. Mr. Farmer, we must be careful to state, rises above the scissors-and-paste method altogether. He does, indeed, depend upon the memoir writers very largely, but he uses them with intelligence, and makes his book a study in the physiology of court life. Beginning with the topography of the palace, which is worked out with great fulness of detail, he proceeds to the King and the personnel of the royal circle, and concludes with an adequate account of the occupations which filled up a normal day. Critical historians are pretty well agreed that the Versailles system of reducing the aristocracy to subjection and making the nobles a body of absentee proprietors was pernicious in the extreme. At the same time, court life, as systematized by Louis XIV., became a factor of great moment in European life, and Mr. Farmer's careful account of Versailles as a microcosm should prove both interesting and useful.

—Within the last few years France has seen a renewal of interest in the early sixteenth century and the beginnings of the Renaissance—a field comparatively unexplored, affording an abundance of matter for the researches of ambitious students. The dominating personality in this period is, of course, Rabelais; and it is about his genial but elusive figure that investigators are most prone to hover. The new *Revue des Études Rabelaisiennes* offers tangible proof of the wealth of opportunity hitherto concealed in 'Gargantua' and 'Pantagruel.' Further substantial evidence is afforded by Louis Thuasne's recent 'Études sur Rabelais.' The head and front, however, of this fruitful revival has been Prof. Abel Lefranc, a man still young in years though ripe in scholarship, whose originality and enthusiasm have made him a prime favorite in the Parisian student world. He has just added to his already numerous studies a large and very handsome volume on 'Les Navigations de Pantagruel' (Paris: Henri Leclerc). It has previously been assumed that the voyages narrated by Rabelais were made of pure dream-stuff, crammed with grotesque and meaningless names, and directed only by the whimsical fancy of their merry author. M. Lefranc shows that this assumption is wholly groundless. The minute topographical accuracy of the French part of the story creates a presumption against chaotic geography elsewhere in the tale; and a comparison of the water routes with the maps of the day reveals a consistent plan in both voyages. Men's heads were full of distant journeys, new lands, and short cuts to India; France was doing her best to rival her maritime neighbors in acquisitions beyond the sea; and Rabelais, in this respect as in others, reflects the mood of his time. In Book II. occurs the trip to Utopia, which, mythical as its destination may be, keeps close to reality until the Red Sea is reached. Although More, from whom Rabelais borrowed Utopia, assigned it no definite place, he seems to have thought of it as lying vaguely in the vicinity of China; and thither, from the Red Sea, sails Pantagruel. Both More and Erasmus contributed largely to the ideas set forth with such eloquence in connection with this episode. The second voyage, which nearly fills Books IV. and V., has for its route nothing more nor less than the famous Northwest Passage. The itinerary can be traced as far as exploration had extended in the author's day; after that it is of necessity fantastic. Jamet, the pilot, is Jacques Cartier himself. All this is argued most convincingly, with a fulness of knowledge that disarms criticism. And even more interesting than the argument is the picture of sixteenth-century seamanship, with its wild aspirations and its amazing audacity. Sundry curious charts illustrate the text. Two drawings, one of 1545 and one of 1575, set visibly before us such ships as Rabelais knew, and the incidents of old-time whale-fishing.

AN INSTRUCTOR OF THE OLD SCHOOL.

Old Greek: A Memoir of Edward North. By S. N. D. North, LL.D. McClure, Phillips & Co. 1905.

"Old Greek" was the nickname, or, more correctly speaking, the pet name, by which Edward North, the professor of Greek, was known to the students and alumni of Hamilton College. This volume, the primary object of which is a biography of Professor North, will certainly serve as an illuminating document to explain the genesis of the old-fashioned college in the United States, and the reasons for its growth and persistence—with newer fashions to fit the times—alongside of the great universities. Dr. North himself was a type—the very best and highest type—of the class of men who gave vigor and a *raison d'être* to the small college. For more than fifty years, he was the core and heart of Hamilton College, the nucleus about which the sentiment of its alumni clustered and crystallized. "The alumnus who thinks of the college thinks first of him," says one of his eulogists; and this strong statement is entirely borne out by the facts. He took a lasting interest in each of the graduates, followed their careers with intimate sympathy, kept up a correspondence with many of them, and even addressed bulletins of college news to them in his own familiar hand. For hundreds he found positions as teachers, and took on himself all the labor and correspondence of a teachers' bureau long before that useful agency had been invented. In this way the alumni became strongly represented in the schools of New York State and elsewhere, even as far as Robert College at Constantinople, and their influence reacted in support of Hamilton College.

These intimate relations were begun, of course, in the classroom. North was the kind of teacher that inspires as well as instructs. It is plain from these pages that he had this gift in a remarkable degree. Among a class of students whose training was often crude and imperfect, he managed to create an enthusiasm for Greek studies and literature. Many years before the *Lehrplan* of 1892 was formulated in Germany, he taught Greek literature in the same liberal and enlightened way and with the same inspiring method which is aimed at in the more recent educational gymnasial programme in Prussia. Direktor Muff or Reinhardt might be amazed at some of the class mottoes which he improvised from year to year, and mystified by the Greek in which they are expressed, but they would have found Dr. North teaching Sophocles with a method as artistic and impressive as their own.

For thirty years Dr. North received an annual salary of one thousand dollars, and was therewith content. A few years after his election to its chair of languages he writes in his journal: "Twenty-eight years ago, I came into the world. Why this event happened I have long been in doubt. But the mystery is now cleared up. It was that I might be just what I am—a contented Professor of Greek and Latin—a happy husband and father." This being the case, he declined several times the offer of the presidency of his college, and in 1864 the principalship of the State Normal School at Albany, with a large increase in salary and decided prominence in educational affairs of the State. "I am held to the soil of College Hill," he says, "by as many ties as were thrown over Gulliver during his first night with the Lilliputians." These ties were strong enough to bind him for more than fifty years to the academic chair which fitted him so perfectly; in commemoration of the fiftieth anniversary of his service, the endowment of his chair was increased, the name of Edward North was attached to his professorship, and this honor was accompanied by enthusiastic addresses from the faculty and the alumni to whom he was so intimately bound.

A career such as this, Solon might have added to his list of beatitudes, while maintaining his reserves as to the happiness of Crœsus. Dr. Münsterberg not long ago suggested that the position of the American professor might be made honorable and dignified by bestowing on him a bouncing salary—something like twenty-five thousand dollars. Gilded with the halo which they love, the American people could then recognize the true worth and virtues of their intellectual saints; though even such a stipend might not be quite enough to dazzle Mr. Hyde or Mr. McCurdy. But a life like Professor North's may be a still better example to our hustling generation. It is not altogether fair to cultivate a learned proletariat, with malice prepense, for the express purpose of teaching this lesson; but it did no harm to the ideals of the Hamilton alumni to cherish the memory of an instructor who approached the standard of Plato and Socrates in the unselfishness and devotion of his service.

This volume gives, as we have said, some glimpses of the growth of a small college and the secret reasons for its survival. When Dr. Simeon North was called to the chair of ancient languages at Hamilton in 1829, the college was reduced to its lowest terms. Ten of the trustees had just resigned, there was no senior class left to be graduated, the visible college consisted of nine students and a faculty of two members. The natural course to take, under these circumstances, would have been to abandon a sinking ship which was nearly as straitened in resources and endowment as it was in officers. Dr. North did not run away, however; he remained, to become president later on, and to steer the college to a deserved prosperity. Nowadays a speedy euthanasia would seem to be the happiest solution of such a situation; the law, indeed, effects this in many States by requiring a liberal endowment. Doubtless there was a real need of Hamilton College in the wilderness, and in fact the earlier colleges sprang up where they were most needed. They were little lamps scattered in dark places, and irradiating communities which came by degrees to use their light with grateful appreciation. They fitted exactly the school system to which they were joined, as well as the demands and conditions of the life of the community. Many still survive as a hardy growth nicely adapted to their environment and constituency, and drawing sap from the constant loyalty of their alumni. The boys entered younger than at present, and were graduated at the age of twenty. They had acquired some general culture and broad points of view, and that is what President Hadley has lately affirmed to be the aim of Yale College for her students. These young men at twenty were ready for professional or technical studies, or for the shop and the office; and on the whole they were ready at exactly the right age. At nineteen or twenty a young man should know the bent of his mind, should be ripe for an introduction to business, or for the long apprenticeship to science or to a pro-

fession. It is noticeable that all the adjustments and readjustments recently made in the universities tend to swing back toward this age limit. It is the limit at which the German gymnasia usually end their training. Some twenty years ago, it was mentioned with satisfaction in one of the Harvard annual reports that the age for admission was increasing—that the average was approaching nineteen years. But professional men noticed with alarm that their sons were graduating at twenty-three.

There is no theory on which such an age is desirable, except that the preparatory school is equivalent to the German gymnasium, and that undergraduate work is true university work. On the contrary, the very best preparatory school is not parallel to the gymnasium, and the graduate of twenty-three is only just entering the long road to science or medicine or the law. Neither in Germany nor in our own country has the young man time lying idle on deposit to honor such drafts. Thoughtful parents and professional men began to see the consequences with dismay. The next step, then, was to abridge the college course, to cut it down to three years at Harvard, to threaten two years at Columbia. But if the college offers a highly expert training, why abridge the boon which it confers? The fact is, that the college should still form a bridge between the ordinary high schools of the country and the real university or the advanced technical school. The average high schools cannot be stretched to be gymnasia—even those which prepare for Harvard are not matches for the gymnasia, though probably it was once hoped that they might be. They are, in fact, out of relation with the general secondary-school system of the country, as President Hadley has recently pointed out. We cannot duplicate the German school system, excellent as it may be for the Germans. The place of their gymnasia is filled partly by our high schools, partly by our colleges; but our best equipped colleges add many subjects which suit perfectly our own conditions of life. Princeton and Yale still profess for undergraduates the programme of general culture which marks the scope of Amherst or Williams. The two thousand undergraduates of Harvard, with a preliminary training inferior to that of the gymnasia, enjoy practically that unfettered freedom of choice which the Germans reserve for the university alone.

The life which is pictured in this memoir had little in common with the unsentimental semi-military grind of a German gymnasium. Its freedom, in spite of occasional escapades, is certainly in harmony with the nature of American youth; its intimacy gave a charm and sentiment to the life and studies which are illustrated in this volume—at great length, it is true, yet we will not say at excessive length, for the story appeals to the pious memories of the family of Hamilton alumni. An Etonian might feel a similar sentiment for Eton, or a Balliol man for his college. A natural peril of the good and efficient small college is that it is liable to prosper and become a large college. If the roots are strong and solid, the branches are likely to spread. This fate it can hardly decline or shun—it is the usual reward of merit. Harvard has already met this doom, and has parted long since with the good fellowship of the class system. Dartmouth and, perhaps, Williams are in danger of the same overgrowth, if it may be so called. There is a real misfortune in parting with that intimacy of intercourse with students and instructors which our minor colleges fostered. At Cambridge and Oxford an ideal balance is struck between the intimacy of the college and the catholicity and breadth of the University. The student has his own little planet to dwell in, which is part of the planetary system of the University. The defect of the country college with us is a certain insularity and narrowness—a slight danger of provincialism and stagnation—which the association with a great university tends to correct. The great university, on the other hand, does not necessarily secure a wide social life and experience for the undergraduates. It may, on the contrary, precipitate the young student into little cliques and eddies, he may be isolated almost completely and revolve about his own individual axis, a solitary, unsocial atom. But the graduate from the narrower life of a small college may enlarge his horizon in the professional schools or the post-graduate work of a large university. This is now becoming the rule; it is a liberalizing influence, to be compared with the habit of migration in the German universities.

Part of a Man's Life. By Thomas Wentworth Higginson. Boston: Houghton, Mifflin & Co. 1905.

If it had been the lot of Colonel Higginson to live in the days of Cato the elder, how surely he would have been immortalized in the pages of the 'De Senectute' as a shining example of a delightful and useful old age, busily engaged in recording for posterity the garnered wisdom of more than eighty years, and abundantly supplied with physical and mental strength for his task, thanks to an earlier life intelligently and honorably self-controlled. If Colonel Higginson has never ascended the heights of purely creative literary genius, he has none the less made for himself in American letters a place of high honor and a name that will not readily be forgotten. The chapters of the present volume range over many fields: "Butterflies in Poetry" and the Negro Problem ("Intensely Human") are chapter topics objectively as widely separated as one could well imagine. But, seen through the mind of Mr. Higginson, there is a very substantial unity in the work after all, and the wording of the title—"part," rather than "parts"—need occasion no question. It is the privilege of a really capable life lived up to its opportunities to make itself a part of all that it has met, and to make all that it has met a part of itself; and the life with which we are brought into contact here has lived fairly up to its opportunities.

Two chapters stand out in bold relief for their bearing upon social, moral, and political problems of the present day—the one, just mentioned, dealing with our relations with the negro; the other, "The Cowardice of Culture," with the chronic distrust on the part of the cultured classes in the ability of the less favored to develop the fundamental qualities of good citizenship. Mr. Higginson takes radical and well-grounded issue with the theory, too prevalent even at the North, that the negro is rightly understood only by the classes to whom he was formerly in bondage. Even a recent biographer of Whittier has said, "Of the real negro, his capacities and limitations, he had, like his fellows, only a dim idea, based largely on theoretical speculation." In Whittier's case it would not be difficult to show the possession of a remarkably true insight, even at rather long range: his study of the character of John Randolph had not been that of personal contact, and yet his verses on "Randolph of Roanoke" constitute one of the most truthful and effective bits of character delineation ever compressed within the same space limits by an American writer. But, as Mr. Higginson shows, the cause of the negro against slavery did not rely upon supporters who took their evidence at second hand, or based their action on abstract speculation. Lundy, Rankin, Garrison, Birney, Channing, and the Grimkés had ample and long accumulated evidence from the sight of their own eyes to sustain on grounds of fact the theoretical opposition to which reason and moral principle had forced them. Tacitus speaks somewhere of our increased bitterness towards those for whom our enmity has no just basis. The slave himself had done no harm to those who held him, but, by the very fact of holding him thus, the owner had done himself harm irreparable and beyond description. He had placed himself athwart the track of advancing moral and industrial civilization. The incubus of the system had left him the insight to foresee the impending disaster, but not the moral energy to make the sacrifice by which alone it could be averted. Under such circumstances, condemned at the bar of civilization for holding the negro in bondage, we may allow that the holders would have been something *more* than human had they not tried to mitigate their own position by persuading themselves that the negro was something *less;* but at the same time we cannot allow ourselves to forget that such an attitude of mind inevitably unfits one to be an impartial judge of the question at issue. Mr. Higginson maintains that our troubles over the negro are to be put on the road towards removal only by full recognition of the fact that the negro, like the white man, is simply a human being, "intensely human" both in his virtues and in his sins. In his own experience at the head of negro troops in the civil war, a movement in which he was the pioneer, it never occurred to him to treat his soldiers or think of them on any other basis, and his confidence in their ordinary humanity was unswervingly justified by results. It would be of untold value to the South to-day to read and digest the calm and sane counsels of this chapter.

The chapter on the Cowardice of Culture has gained immensely in its power of suggestion since it was written, now that fear of another kind has broken away the barriers of an exclusive aristocracy, and at one stroke converted millions of the uncultured masses of Russia into effective units in the government of an empire known to possess

latent possibilities of a wealth and power immeasurably beyond what it has yet attained, even though no slightest part of its bureaucratic dreams of external expansion should ever be realized. The faith of many will be sorely tried by the disorders sure to attend the period of readjustment, just as the faith of many Northern patriots has been tried by the mishaps of our first generation of negro citizenship. Our troubles with the negro have been born of the cowardice which would not trust him, which has given him not a genuine freedom, but a half-freedom "tempered by chain-gangs, lynching, and the lash." If we are not in a position to lend Russia the moral aid which she so sorely needs from us to-day, it is because we have let the vicissitudes of a needless war and of party politics drive us into the practical maintenance of the position that self-government is not an ultimate and beneficent principle of political philosophy, but merely a convenient instrument for use in certain high stages of civilization, best kept out of reach of the weaker races. It should be needless to call attention to the fact that, on the theory which we are to-day applying to the government of the Filipinos, the masses of Russia ought to be better governed by the bureaucracy than by themselves. It will be fortunate for the new régime if its more liberal leaders imbibe the spirit of our author rather than the practice of an administration caught in the meshes of a suicidal expediency. "I take it," Mr. Higginson says, "that there has never been a period in our history since the American nation was independent when it would not have been a calamity to have it controlled by its highly educated men alone." We have recently learned from the reminiscences of Andrew D. White what a high degree of personal culture some of the leading official spirits of reactionary Russia had developed; and yet the recent war has thrown these same officials upon the screen before the eyes of an onlooking world as examples of an almost incredible and altogether disastrous inefficiency. We get, then, from Mr. Higginson the doctrine that the cure for the troubles of democracy is more democracy.

We have taken up our space with the suggestions of these two chapters under the conviction that they convey important truth admirably adapted to present needs. Of the twelve chapters unnoticed we shall merely say that the reader will find delight and profit in them all. We congratulate the author on carrying to his eighty-second year an intellect the eye of which is not dimmed, nor its natural vigor abated.

Ipswich in the Massachusetts Bay Colony, 1633 to 1700. By Thomas Franklin Waters, President of the Ipswich Historical Society. Published by the Society. 1905. 8vo, pp. 586.

In one feature, at least, this ample and handsomely printed work surpasses any other town history that we have ever encountered. We refer to that portion of the second half which deals with "Houses and Lands," and which, with the aid of a diagram, traces the fortunes of each dwelling and lot of the original settlers *nominatim* not only to 1700, but to the present day. This enormous labor is fortified by the citation of wills and deeds, and the result is a firm base for all future researches. It is supplemented by a summary of the names of the settlers from 1633 to 1649, with the year in which each name first occurs in the town records, and by some sample inventories of personal effects. Other remarkable lists of the early inhabitants have been constructed for the chapter entitled "The Body Politic"; and show that out of an enrolled male population in 1678 totalling 508, there were 220 commoners and 125 freemen (17 of these not being commoners). The freemen alone were entitled to vote for the officers and magistrates of the Colony and to speak and vote in town meeting; the commoners might vote on all questions relating to the common lands; the residue, so-called Residents, were eligible for jury duty and to vote for selectmen.

"Probably," says Mr. Waters, "there was no nation of the Old World where the lines of division between the rich and the poor, the learned and the unlearned, the master and the servant, were drawn more sharply. The aristocracy of old Ipswich was as definite and as haughty a body, it may be, as the aristocracy of London. Nevertheless, the test of eligibility to full citizenship resided not in gentle birth, or in the possession of wealth or learning or official station, but in Christian manhood, publicly professed by union with the Christian Church. The poorest and most ignorant was not debarred from this privilege of church membership, and the right of franchise followed naturally from this."

The Saltonstalls, John Winthrop, jr., whose portrait serves for frontispiece, the Rev. Nathaniel Ward, the Rev. Nathaniel Rogers, the Rev. John Norton, Samuel Appleton, Anne Bradstreet, and Ezekiel Cheever, are the more famous names associated with the early period of Agawam, or Ipswich. Three of these were graduates of Emmanuel College, Cambridge, and the younger Richard Saltonstall, a man of great independence of mind, honored his breeding by protesting to the General Court against the importation of two kidnapped Guinea negroes in 1645, advocating imprisonment for the shipmaster and the return of the slaves at the public expense. Southerners fond of attributing to New England, along with the mother country, the imposing of the curse of slavery on their section, should take notice of this forerunner of Judge Sewall with his tract, "The Selling of Joseph." What has the South to show resembling either? Nathaniel Ward, another Emmanuel man, was the town's leading intellect, author and publicist, who in 1641 drew the first code of the colony, its "Body of Liberties," with the rights of man for its preamble, and whose 'Simple Cobbler of Agawam' (1646) is one of the New England Puritan classics. Valuable letters of Ward's are printed in an appendix.

Mr. Waters's historical treatment is episodical and is very pleasingly manifested in the opening chapters on the aborigines as described by the first Englishmen and on home and dress. These themes are invested with a really fresh interest, and set forth with noticeable literary skill. In an Indian shell-heap supposed traces of cannibalism have been found. The town checked the cutting down of trees, even on private house lots, by the most stringent regulations. Ipswich was, by reason of its river, a great fishing village, and each boat's crew was entitled to graze one cow on the common. While potatoes were not cultivated till 1733, tobacco began to be grown a hundred years before. Ezekiel Cheever, more famous as Boston's schoolmaster, was called to the head of Ipswich's grammar school (meaning then a Latin school, a feeder to Harvard College) in 1660. King Philip's war is gone into at length, and the letters of Capt. Samuel Appleton, who commanded the "confederate army" of "the United Colonies," are valuable for the light they throw on the friction resulting from this small beginning of a larger fusion. Towards Andros the town was disposed to be compliant, though it resisted his Tax Act till forced to submit. It was spared Salem's witchcraft delirium, and the victims in Ipswich were few.

Much remains to be said or sayable, but we must stay our hand. Mr. Waters's work, which we hope he will follow up for later times, as he half promises, takes its place in the front rank of its class, and can hardly be praised too highly for diligent research, candor, taste, style and construction. Except for a little wabbling in spelling the name of the historian Palfrey, the printer has performed his part very commendably.

The Political History of England. By W. Hunt and R. L. Poole. Vol. X. From the Accession of George III. to the Close of Pitt's First Administration. By W. Hunt. Longmans, Green & Co. 1905.

The example set by Lord Acton with the Cambridge Modern History has inspired a group of Oxford scholars to emulation. With the assistance of Dr. Hodgkin, Professor Adams of Yale, and Professor Pollard of London, and under the very competent joint leadership of the editor of the *English Historical Review* and of the president of the Royal Historical Society, they propose to cover the political history of England from the earliest times to the present in twelve volumes. The inherent defects of coöperative historical writing have been too frequently reiterated to require restatement here, but it may be said at once that the present undertaking is a great improvement on the Cambridge Modern History in this respect, that each volume is the work of one author instead of a patchwork of historical snippets by a number of authors. It may further be said that there is a distinct need for a comprehensive political history of England, condensing into a convenient form the results of the very active scholarship of the present day. In the accomplishment of the latter purpose, however, the general reader might well expect to find controversial questions treated in as definite and thorough a manner as possible. In the volume now published there are several questions of the sort dealt with, notably two to be hereafter mentioned. It cannot be said that the reader is left with the impression that he has been presented with a thorough and authoritative judgment in either case.

This volume, the first to appear, but the tenth in number, is by the Rev. William Hunt, and embraces the reign of George III. down to the year 1801. On the whole it may be said that the work is solidly and satisfactorily done, although a period containing two great revolutions was perhaps not that best adapted to the author's talent. Mr. Hunt is as conservative in his politics as he is in his scholar-

ship, which, perhaps, is not an equal merit. He is far removed from Sir George Trevelyan's outlook on the question of American independence, and his hero, if he has one, is George III. There is something to be said for this position; and even for those who will not agree it may serve as a useful corrective. But, all allowance made, it is clear that Mr. Hunt lacks the breadth of vision, the catholicity of mind, without which a revolution, with its inevitable exaggerations, cannot be judged. Thus, we find him within a few pages describing Chatham's rhetoric as "sublime," and the Declaration of Independence as "crude"; the epithets might perfectly well be reversed, though with no better justification. It is the same with the French Revolution; to Mr. Hunt it is still a "byword." The Declaration of the Rights of Man he takes pains to describe as "flatulent"; is it possible that Mr. Hunt has not read over this much and unjustly abused charter of liberty? He would be surprised to find that, making exception of a question of legal procedure specified in clause 9, it does not require a word changed to fit the political conditions that France has attained under the Third Republic. The fact is, that Mr. Hunt suffers from a constitutional incapacity which makes him unable to deal with such questions on a broad enough basis.

In other respects there is little fault to find with his work. It is packed as full of fact as his space will permit, and it is not often that his knowledge or judgment appears to err. His description of General Howe as "incompetent" is, however, not justifiable. At page 121, Lady Sarah Gordon-Lennox, whom George III. for a time wanted to marry, is described as the cousin of Charles James Fox; she was in fact his aunt. *Franciscans* (p. 35), for the believers in Sir Philip Francis as Junius, is not a commendable use of a term which is more properly associated with St. Francis and even, at a pinch, with the Hell Fire Club. On the identity of Junius, Mr. Hunt does not, as he might be expected to, give us an authoritative summing up. He dismisses the subject in a few words, and with a statement to the effect that the authorship of Sir Philip Francis is generally unquestioned. That is going too far; it was certainly not the opinion of the late Mr. Fraser Rae. Another highly controversial question is also dealt with insufficiently, that of Nelson's conduct at Naples in 1799. In this matter Mr. Hunt, with an evident desire to be fair, goes further in criticism of Nelson than most English historians, but he does not show a firm grasp of the crucial points in the evidence, and he misses Mr. Badham's works in his authorities.

On the whole, however, these are minor defects in a very useful book, in which the sense of proportion, the volume of information, and the continuity of narrative are good. Mr. Hunt shows these qualities at their best in his remarkably condensed chapter on "Social and Economic Progress."

Florence. By A. Philippi. With 170 illustrations. Translated from the German by P. G. Konody. (Famous Art Cities, No. IV.) Charles Scribner's Sons. 1905.

The modern traveller who previously prepares himself for seeing Italian cities by an attentive study of monographs and illustrated guide-books, must resign himself to eliminate surprise from his pleasurable sensations; on the other hand, he can, by knowing the architectural structure of the principal monuments, the outlines of sculpture and paintings, devote his time more efficiently to what interests him most. Philippi's 'Florence' will be found equally useful for study beforehand and for an *aide-mémoire*. Its lightness makes it especially easy to carry about.

In commendably brief space the author gives us a comprehensive survey of Florentine history, the part played by all its leading citizens both in politics, literature, and art, the origin of all its important buildings, with extensive architectural notes about them and excellent illustrations of its churches, palaces, groups of sculpture, altar-pieces, frescoes, and noteworthy details. It is in the lives of Florentine painters and the descriptions of their principal works that Philippi is least instructive. His digressions into art criticism are too palpably futile. For instance, with regard to Botticelli, although he is accorded a prominent rank among painters, we read that, while a brilliant designer, his drawing is not correct, nor his vision pictorial, nor is he a colorist. Moreover, he did not attempt to make the objects he painted appear "plastic and round," nor to make space recede, nor was he interested in the landscape behind his figures—all singular accusations, which prove that Philippi does not recognize style in drawing, or know the first principles of decorative art, nor has he observed the wonderful space and breadth in the landscape of winding-river background to "The Annunciation" in the Uffizi, which is not among his illustrations of Botticelli's works. He goes on to say: "In spite of these imperfections, he impressed his contemporaries, and has now become the pet of a public that would not think any less of him if one were to say that he was really no painter, but a draughtsman and illuminator: the more wonderful, the greater, they would say, his art." Philippi carps also at what he calls the restlessness of Botticelli—in other words, his faculty for dramatic expression. In the movement of his figures he esteems Ghirlandajo as far the greater artist and painter of the two. These individual appreciations are in no wise helpful to any one. In treating of Raphael, we are bade base our judgment of his skill as a portrait painter on his paintings of Angelo and Maddaleno Doni in the Pitti Gallery. Yet further on we are told they they are not attributed to that master.

The book suffers from being crudely translated from the German.

Essays. By Robert, Marquess of Salisbury. Vol. I., Biographical. Vol. II., Foreign Politics. E. P. Dutton & Co. 1905.

"The essays in these volumes," says a prefatory note, "were among the articles contributed by Lord Salisbury to the *Quarterly Review* in the years 1861 to 1864, when the author was Conservative Member for Stamford, and before he had been in office." We may add a further word of explanation, in stating that, with the exception of two long articles on Stanhope's 'Pitt,' both volumes are occupied with papers on diplomatic subjects. The review of Castlereagh's career does, indeed, embrace a certain amount of biographical comment, but the author's main concern is to estimate the services of a minister who did his most important work at the Foreign Office. The other three essays deal with "Poland," "The Danish Duchies," and "Foreign Policy." Throughout, Lord Salisbury is writing as a champion of Tory principles and Tory leaders. Even his essay on "Foreign Policy" is less a statement of the leading ideas which should determine national action than a sharp criticism of Lord John Russell.

The love of sarcasm and epigram which marked Lord Salisbury's speeches, and even his State papers, is abundantly illustrated in the course of these essays. Lord Castlereagh, for example, was cold and impassive, but Salisbury could not dismiss this side of his character without bringing in a dig at the Whigs.

"He had his own notions of what good there was to be done, and what was the best way of doing it; and neither contradiction at home nor coaxing abroad ever moved him a hair's-breadth from his own particular point of view. But they were such unpoetical, unromantic notions that no one could, by any stretch of language, dignify them as 'a cause.'"

This allusion to "causes" furnishes an excellent opportunity for a side-glance at the sentimentalism of those who had learned their political alphabet in the school of Fox:

"He might have maintained his policy with impunity if in his speeches he would have done readier homage to the Liberal catch-words of the day. If he had only constructed a few brilliant periods about nationality or freedom, or given a little wordy sympathy to Greece, or Naples, or Spain, or the South American republics, the world would have heard much less of the horrors of his policy.

There are so many thrusts of this kind at political opponents that one must find in them a salient characteristic of Salisbury's literary style. On the whole, the most determined onslaught of the two volumes is the diatribe against Fox. Lord Salisbury, in casting about for reasons which will explain Pitt's long retention of power, finds the most important of all in the low character of his opponents. "There have been many statesmen with worse characters than Fox; there may have been some as pure as Pitt. But the extremes have never been contrasted with each other as they were in that generation. There never was a time when the reputation of one rival stood so high, while that of the other stood so low." The political canonization of Fox is, in Lord Salisbury's eyes, to be equalled only by the hagiological masterpieces of the *Acta Sanctorum*. "The intrigues of a restless ambition that never knew scruple or worried itself about principle, have been converted into the struggle of a second Hampden against a Court conspiracy for enslaving England. The phrases struck out in the heat of debate, or selected at random as the readiest missiles to fling at an adversary's head, have been cited as the profound maxims of a political philosopher." Lord Salisbury is willing to admit the fact of Fox's wonderful fascination, but, in praising Pitt, he uses his strongest colors to bring out the contrast between purity of conduct and gross irregularity, between the noblest patriotism and the self-seeking lit-

tleness of party politics. Salisbury learned to be a hard hitter before ever he entered a ministry.

Of the two studies in biography, that on Castlereagh is likely to prove the more interesting and valuable. Concerning Pitt, nothing is said which has not often been said before by his fervent admirers. Castlereagh, from having had few intimate friends and no picturesque qualities, becomes in most historical works a mere lay figure without flesh-and-blood associations of any kind. Lord Salisbury, though not until forty years after his death, rendered a real service to his reputation by dwelling upon his deep sense of public duty, and interpreting his policy with sympathetic touch. For the rest, this collection of articles from the *Quarterly* is remarkable chiefly for its attack upon German policy in the Schleswig-Holstein affair and its somewhat unusual attitude toward the Polish question.

Bismarck, who was not good at forgiving old enemies unless they had come to their knees, never liked Salisbury, and even fastened upon him a highly uncomplimentary phrase. Why the Chancellor cared so little for the colleague who accompanied Disraeli to the Berlin Congress may perhaps be seen from a perusal of Salisbury's essay on the Danish Duchies. This criticism of Lord John's refusal to draw the sword was doubtless a party pamphlet, but it was something more. It would easily have been possible to castigate the Whigs without writing thus:

"The care with which the Germans have selected the weakest State upon their frontier for the exhibition of their irrepressible patriotism, shows of what metal it is made. The magnificent sentiments they are parading, the exhortations to courage, the appeal to the German honor, would be in place if they were undertaking to free Alsace from France, or Livonia from Russia. Their zeal for German nationality, if it appears to us hot, is at least invariably safe. Once convince them that the raid on Denmark is not safe, and the excitement will subside with a marvellous rapidity."

Gibes of this kind do not make for the harmony of States or the good will of individual politicians, even in days when the immediate crisis is past.

The article on "Poland" seems to us by far the most striking of the whole series, for in it Salisbury attempted a very unusual feat. With talk about the "crime" of partitioning Poland he had no patience whatever, but he did find ground to censure in the strongest terms the misgovernment of Poland by the Russians; 1815 and not 1773 is for him the critical date in Polish annals. "As a nation the Poles had fallen by the justest retribution that was ever meted out to a foreign policy of incessant aggression, and an oppressive and barbarous domestic rule. But they had not lost their rights as men. They had a right to good government, and, at least, to some portion of the freedom they had lost." In other words, Salisbury found an opportunity for denouncing Russia without uttering a syllable in praise of the ancient Polish polity which had perished during the period of the Partition treaties. The least sentimental of all men and a lover of paradox, this method of approaching the Polish question must have given him distinct intellectual amusement.

Regarded merely as historical studies, the contributions which Lord Salisbury made to the *Quarterly Review* are not important. They attest a considerable range of reading in political history, but most of the facts employed seem to have been swept together for the occasion, while the spirit of the true historian is abundantly wanting. Thanks, however, to their trenchant style and their author's subsequent part in foreign politics, they are worth reprinting.

Authorities unite in praising Lankesert's authoritative yet popular work, EXTINCT ANIMALS. The N. Y. Sun says: "A charming book . . . showing that the greatest learning can be combined with the utmost simplicity of expression . . . a book of intense interest . . . the pictures are skillfully arranged to elucidate the text." The N. Y. Tribune: "Exceedingly interesting . . . popular rather than technical . . . should prove a powerful incentive to natural history study . . . opens up a world of new interest." The Outlook: "Well adapted to arouse the interest of adult as well as youthful minds in a fascinating branch of study." $1.75 net (by mail $1.95). Henry Holt & Company, 29 W. 23d St., New York.

A RARE BOOK OF HUMOR

EUTYCHUS

By BROOKE HERFORD

A delightfully witty commentary on the foibles and minor weaknesses of human nature by a keen observer and charmingly droll writer. The title sounds serious—hence the amusing surprise at the contents.

SUGGESTIONS FOR LIBRARIES

Selected Lists of Books of Reference, History, Biography, and Literature with the best current editions, notes, and the prices given

New and revised edition Crown, 8vo, net $1.25:

The design of the work is to give, in the plainest and most practical form, a complete body of suggestions concerning the right use of books, from the smallest private to the largest public library, and the development of all literary taste from childhood to age. Since its first appearance in 1881, the book has circulated very widely in America and England, and has been translated into Russian. More than 100,000 copies have been sold to the present time.

DEFICIENT CHILDREN.

Means and Methods of Treatment to Suit Varied Conditions and Circumstances.

The most efficient treatment for children who are mentally backward or deficient is that which is given at the Bancroft-Cox Training School, Haddonfield, N. J. Remarkable results have been attained here in cases that appeared hopeless.

When conditions make it impossible or undesirable that the child be sent from home, a trained teacher can be detailed from the school and apply at your home the system of treatment followed at this institution.

Another plan by which any deficient child may be properly trained and benefited is through the Corresponding Course of Instruction conducted by the Bancroft Training School This course, by a system of instruction fitted to individual cases, qualifies a mother or other person in the home to teach and train a child according to the principles that have accomplished such beneficial results at the school.

A book giving a general outline for the treatment of backward and deficient children in the home will be sent on receipt of 50 cents. This book is, of course, general in its application and not specific, as is the regular instruction course. Full details of the Correspondence Course and illustrated circular describing the work of the resident school and special teachers, can be had upon request addressed to Miss Margaret Bancroft, Principal.

Sally Wister's Journal.

About an hour since, Sister Hannah came and said Captain Dandridge was in the parlor. I went in. He met me, caught my hands. "Oh, Miss Sally, I have a beautiful sweetheart for you."

"Poh! Ridiculous! Loose my hands!"

"Well, but don't be so cross. Have you any commands at headquarters?

"Pray, who is your commanding officer?"

"Colonel Bland, ma'am."

"Please give my compliments to him, and I should be glad if he would send thee back with a little more manners."

He replied wickedly, and told me I had a little, spiteful heart. He was intolerably saucy.

VARIORUM EDITION OF

SHAKESPEARE

EDITED BY

HORACE HOWARD FURNESS

THIS edition, prepared by the ablest living Shakespearian scholar, has been received everywhere with the greatest possible favor, and has been considered by all critics as the most exhaustive work on Shakespeare's plays. For the study of the plays Mr. Furness's edition is invaluable. It is without question the most complete in existence, the editor having taken advantage of the labors of all former Shakespearian scholars, English, French and German.

The FOURTEEN VOLUMES *which have thus far appeared are*

Romeo and Juliet
Hamlet (two volumes)
Macbeth
Revised Edition by
HORACE HOWARD FURNESS, Jr.
King Lear
Othello
The Merchant of Venice
As You Like It
The Tempest
A Midsummer Night's Dream
The Winter's Tale
Much Ado About Nothing
Twelfth Night
Love's Labour's Lost [Postage, 30 cents extra]

Royal octavo, gilt top, uncut edges, $4.00, net, per volume.
Half morocco, gilt top, $5.00, net, per volume.

"These monumental volumes are the admiration of every true student of Shakespeare," says Dr. William Aldis Wright.

The London Athenæum states: "This, the most exhaustive work on Shakespeare's plays, comes from America."

DR. W. J. ROLFE declares of a recent volume: "This, too, like its predecessors, is . . . the entire literature of the subject compressed into a single volume, and the more valuable for the editor's personal contributions thereto."

"Mr. Furness's noble work will be a lasting honor to American letters. Not only has he as large an acquaintance with Shakespearian critical literature as any other living commentator—probably larger than all, except Furnivall and Fleay, and certainly his judgment is clearer and fairer than Furnivall's—but he also is perfectly familiar with the best acting of Shakespearian plays."—*New York Times.*

NEW BOOKS OF DISTINCTION

A SHORT HISTORY OF ITALY

By HENRY D. SEDGWICK

"In this Mr. Sedgwick gives a clear and correct impression of Italy as a whole, laying emphasis upon the matters of greatest general interest, the papacy and the Renaissance. His special object was to put in high relief those achievements which make Italy so charming and interesting to the world and to give the largest possible space to the great men to whom these achievements are due."—*Cleveland Leader.* With maps. $2.00, *net.* Postpaid, $2.17.

IN OUR CONVENT DAYS

By AGNES REPPLIER

"Perfect stories, warm from the heart and spirit of the writer, alive with that indefinable thrill that means an impeccable reality and truth to nature."—*Chicago Record-Herald.* $1.10, *net.* Postpaid, $1.20

THE FARCE OF MASTER PIERRE PATELIN

Englished by RICHARD HOLBROOK

The first translation of this sparkling comedy, in a modern tongue, delightful not only to read, but also to perform. Illustrated, $2.00, *net* Postpaid, $2.12.

THE PARDONER'S WALLET

By SAMUEL M. CROTHERS

"It is time that the country awoke to the fact that in Samuel M. Crothers it has a humorist of the first rank, a satirist of no mean ability, and an essayist to be reckoned with."—*Chicago Tribune.* By the author of "The Gentle Reader." $1.25 *net.* Postpaid, $1.36.

SIDNEY LANIER

By EDWIN MIMS

"It is an admirable piece of discriminating, judicious, intelligent and sympathetic interpretation."—*The Outlook,* New York. With portrait, $1.50, *net.* Postpaid, $1.62.

JAMES RUSSELL LOWELL

By FERRIS GREENSLET

"Mr. Greenslet has moulded an independent impression of Lowell's life, getting at the genuine self of the real man and keeping his critical sense intact."—*Boston Advertiser.* Illustrated, $1.50, *net.* Postpaid, $1.62.

JAMES G. BLAINE

By EDWARD STANWOOD

"Mr. Stanwood tells the whole story clearly and his narrative from first to last is picturesque and entertaining."—*New York Times.* With portrait. $1.25, *net.* Postpaid, $1.37.

PART OF A MAN'S LIFE

By THOMAS WENTWORTH HIGGINSON

"These ripe and scholarly chapters—ripe with the varied experience of eighty years and more, and scholarly with the scholarship of a lover not only of books, but of men—have an interest and value far exceeding anything that another pen might contrive to say about them."—*The Dial,* Chicago. Fully illustrated, $2.50, *net.* Postpaid, $2.68.

ENGLISH HOURS

By HENRY JAMES

"Mr. Pennell's illustrations represent the most picturesque of scenes throughout England, and they bring back, as do also Mr. James's pleasant chapters, genial memories of tours hither and thither through the English town and county."—*Boston Transcript.* Illustrated by Joseph Pennell. $3.00.

PARADISE

By ALICE BROWN

"Few writers of fiction have equalled Miss Brown in their understanding and analysis of the New England character, and few have been so skillful in endowing the creations of her imagination with actual life. 'Paradise' is, in short, a very human story."—*Boston Transcript.* $1.50.

THE ENGLAND AND HOLLAND OF THE PILGRIMS

By MORTON DEXTER

"So thorough and honest an historical work can afford to have its merits and limitations known at once. In a word, we have here the results of solid, long-continued, painstaking research, with correction and recorrection of the first work and of various mistaken impressions, confusions and inferences of other writers."—*The Dial,* Chicago. Illustrated, $3.50, *net.* Postpaid, $3.73.

BRET HARTE'S HER LETTER

Illustrated by ARTHUR I. KELLER

"I wish that something nowadays could give me the thrill of delight that these poems of Bret Harte did when I first read them."—*Jeannette L. Gilder,* editor of *The Critic.* With 44 full-page pictures in color and tint and many decorations in gold. $2.00.

THE STORY OF NOAH'S ARK

By E. BOYD SMITH

"A Bible story treated humorously and yet reverently! And there is not a grown-up but will chuckle at all of these pictures, which are both artistic and tremendously funny. This is a picture book, indeed; one of a thousand."—*Washington Star.*
$2.00, *net.* Postpaid, $2.19.

H. WILLIAMS, 307 Fifth Ave., New York.

Merrill's Elementary Text-Book of Theoretical Mechanics

$1.50

This book is intended for the upper classes in secondary schools and for the two lower classes in college. Only a knowledge of elementary algebra, plane geometry, and plane trigonometry is required for a thorough comprehension of the work. The book presents only those principles and methods which are of the greatest importance, and thus overcomes many of the difficulties now encountered by students who are looking forward to an industrial career in engineering. The explanation of each topic is followed by a few well-chosen examples to fix and apply the principles involved. Four-place tables of the natural trigonometric functions appear at the end of the book.

AMERICAN BOOK COMPANY
New York Cincinnati Chicago Boston

ONE of the joys of life is to possess for one's very own a WATERMAN'S IDEAL FOUNTAIN PEN, not *ideal* in the literal sense, but a very *real* and practical good thing. Always ready, saves time, trouble, and the exasperated feeling that a scratchy, spluttering pen breeds in the most patient of mortals. Not a man alive who has ever owned one of the Waterman's Ideal would be willing to do without it, and gratitude unstinted would be showered upon the giver of a Christmas present of the genuine "Ideal," and don't think they're only for business men. Your oldest boy would be proud indeed to have one in his vest pocket, and would be on hand with the goods whenever a pen was needed. A wife, sister, or sweetheart would appreciate one also, and whether she writes the free bold "twenty words to a page" style or the fine Italian hand of an earlier day, the special kind of pen she likes is to be found among the Waterman "Ideals."

The Lowell Offering

A reprint of the famous magazine written entirely by the mill girls of Lowell, in 1845, is one of the new leaflets just added to the Old South series.

Northern Trails

In Labrador and Newfoundland

By WILLIAM J. LONG

One feels the exhilaration of the northern air of that great undiscovered country of Labrador as the author carries him away from the artificiality of the man-made town to the subtle woodsy fragrance which speaks of fir balsam and birch smoke and the still white woods.

There are books, and books but quite the best written one that has appeared this year is Mr. William J. Long's "NORTHERN TRAILS." —*Chicago Advance.*

If anybody should say "Give me the title of a book of exceptional merit and appropriate as a gift to a boy in his teens or to a young girl," we should without a moment's hesitation say "NORTHERN TRAILS." —*Syracuse Herald.*

THE UNIVERSITY OF CHICAGO PRESS

NEW BOOKS

General Sociology — ALBION W. SMALL

Professor Small's main proposition is that the traditional sciences relating to the spiritual sides of life are sterile, unless they are carried out to a point at which they blend in one system of knowledge. The book is an exposition of the development of social theory from Spencer to Ratzenhofer, and a plea for the completion of the general structure of social science.
753 pp.; 8vo, cloth; net $4.00, postpaid $4.23.

A Decade of Civic Development — CHARLES ZUEBLIN

The author gives a concise and spirited account of certain definite measures—political, economic, social, and artistic—for the betterment of American cities. Professor Zueblin was formerly president of the American League for Civic Improvement. He is the author of *American Municipal Progress* and other volumes.
200 pp.; 12mo, cloth; net $1.25, postpaid $1.39.

Primary Facts in Religious Thought — ALFRED W. WISHART

Seven short essays intended to state, in a simple and practical manner, the essential principles of religion, and to clear them from the confusion arising from theoretical changes and historical criticism.
125 pp.; 12mo, cloth ; net 75c., postpaid 82c.

Egoism: A Study in the Social Premises of Religion — LOUIS WALLIS

In this essay the author first sets forth the proposition that "egoism is the only 'force' propelling the social machine." This thesis he then proceeds to demonstrate by evidence drawn from biblical history. Lastly he shows its practical bearing on the present social problem.
137 pp.; 16mo, cloth; net, 75c, postpaid, 85c.

Methods in Plant Histology — CHARLES J. CHAMBERLAIN

An indispensable book for students of Botany. The volume contains directions for collecting and preparing plant material for microscopic investigation. It is the first complete manual to be published on this subject. Second edition, illustrated.
272 pp.; 8vo, cloth; net $2.25, postpaid $2.39.

RECENT BOOKS OF IMPORTANCE

Christian Belief Interpreted by Christian Science — CHARLES CUTHBERT HALL

This interesting volume contains the "Barrows Lectures" delivered by President Hall in the leading cities of India and Japan, in connection with the lectureship founded by Mrs. Caroline E. Haskell.

In these days, when the momentous events in the Far East have quickened an interest in all things Oriental, this thoughtful and earnest work should be welcomed by everyone who desires to go below the surface for an explanation of the message from the mysterious East for which all are waiting.

300 pp.; 8vo, cloth ; net $1.50, postpaid, $1.66.

Prophetic Element in the Old Testament — WILLIAM R. HARPER

A scholarly handbook for advanced students. This volume is the latest in the series of Constructive Bible Studies. 150 pp.; 8vo, cloth ; postpaid, $1.00.

Russia and Its Crisis — PAUL MILYOUKOV

The *New York Times*, under date of August 26, says: "It is not often that an author is so forcibly reminded of the truth of his own printed words as Professor Paul Milyoukov has been. His book on Russia, which we review this week, describes the 'attempt at welding autocracy and liberalism,' now under way in his native land. The last few days have given a striking exemplification of both the liberalism and the autocracy. The Czar has issued his rescript instituting a National Assembly, and within a fortnight of it his Government has arrested Professor Milyoukov for his activity in promoting agitation for reform in the empire."

602 pp.; 8vo, cloth, net, $3.00, postpaid, $3.20.

Place of Industries in Elementary Education — KATHARINE E. DOPP

"The book deals with the basic principles of manual training, and is a distinct contribution to the practical pedagogy of today." Third edition. Revised. Illustrated. 278 pp., cloth ; net, $1.00, postpaid, $1.11.

A Bulletin of New Books, which contains detailed announcements for the year will be mailed free upon request.

New Macmillan Publications

JUST READY

Mr. Samuel Isham's History of American Painting

With 12 full-page photogravures and 100 illustrations in the text. Uniform with Mr. Taft's "History of American Sculpture," and Mr. Elson's "History of American Music," in "The History of American Art," edited by JOHN C. VAN DYKE, L.H.D.

Cloth, imperial 8vo, handsomely bound in red and gold. $5.00 net (carriage extra)

The author traces the development of art in this country, showing the external influences that were brought to bear and how they were developed by the social conditions of America and the personality of the artists.

The preceding volumes of this series have each been ranked by the best critics as "undoubtedly the most comprehensive and best work of its class," in its independent field.

PUBLISHED THIS WEEK

Mr. Herbert Paul's History of England. *Fourth Volume*

"His work must rank as a vigorous, lucid and scrupulously fair history of modern times in England."—*Boston Advertiser.* "It is this very quality, plus the brilliancy and crispness of Mr. Paul's manner of telling his story, that makes his book so attractive."—*Brooklyn Eagle.* *Cloth, 8vo, gil top. $2.50 nett (postage 17 cents.)*

The Life and Writings of Benjamin Franklin *Seeond Volume*

Edited by ALBERT H. SMYTH, Philadelphia. Limited Library edition, with portraits and other illustrations.

In ten volumes, cloth 8vo, $3.00 net per volume

Dr. Smyth's edition of the writings of Benjamin Franklin will be by far the most complete and inclusive. It will contain several hundred letters and manuscripts unknown to previous editors of Franklin, half of which are original letters and other writings by Franklin himself, among these being many of the most important documents by Franklin that have ever been discovered.

The Works of Maurice Hewlett *Fourth Volume*

Uniform with the limited editions of the works of Walter Pater and Matthew Arnold. Ten volumes issued monthly. "New Canterbury Tales," uniform with "The Forest Lovers," "Richard Yea-and-Nay" and "Little Novels of Italy" already issued.

500 sets on large paper. Olive green cloth, gilt, $3.00 net per volume

"When they are all printed, when the novels and the poems are all in this form, with 'Earthwork Out of Tuscany,' and the 'The Tuscan Road,' the well proportioned octavos, gleaming in their appropriately sylvan green and gold, will warm the heart of every reader who watches contemporary literature for the things which promise to last."—*The New York Tribune.*

Recollections By William O'Brien, M.P.

The book takes one behind the scenes of the Parnell movement in dramatic fashion, in telling the life history of a distinct lively and original personality. *Cloth, 8vo, 518 pages, $3.50 net*

Mr. Clyde Fitch's The Girl with the Green Eyes *Cloth, 16mo. 75 cents net*

An original American play in four acts. Dedicated to Miss Clara Bloodgood as the "ideal interpreter of 'Jinny.'"

The Nation.

NEW YORK, THURSDAY, NOVEMBER 30, 1905.

The Week.

President Roosevelt's letter dismissing William S. Leib, Assistant United States Treasurer at Philadelphia, is neither short nor sweet. On several occasions the President has paid his respects to delinquent officials—the gentlemen taken in the postal frauds and the cotton-report scandals—in no uncertain tone. The letter to Mr. Leib matches the best of these denunciatory epistles. Leib had all the political backing that anybody could want. Senators Penrose and Knox requested a special hearing for him, and Representative Patterson defended him. But no machine has commanded respect since November 7; and the Pennsylvania machine has been in such unusual disrepute that to throw a brick at it is everywhere regarded as an act of special virtue. The stoutest partisans will never dare to accuse the President of ignoring the claims of "the organization" and thus imperilling the nation. Leib is an old and hardened offender. The only thing to regret is that he was not beheaded earlier. In this regret the President himself shares. "If the case had at that time [some months ago] been called to my attention," says Mr. Roosevelt, "my belief is that I would have then requested your resignation."

Secretary Taft intimates that he expects Congress to investigate the Panama Commission. It would fail of its duty if it did not. The prima-facie evidence of waste, extravagance, and mismanagement is abundant. One result is pretty certain to be established—the folly of appropriating $10,000,000 to be expended in the discretion of any man. The temptation of such a sum available without a detailed estimate submitted to Congress is not unlike that of a huge life-insurance surplus: it makes people mad to get at it. Congressmen who have seen the salary list of the Panama Commission are amazed at it. It has something of the air of a royal civil list. Then there are many contracts and purchases made by the Commission into which Congress should feel it obligatory to look. Furthermore, the conditions on the Isthmus seem to call for scrutiny. The *Herald* printed on Friday the protests of American clergymen in Panama against the "monstrous iniquity" of the importation of hundreds of abandoned women, with the consent of the canal authorities, the object being to make the laborers "contented." And physicians on the spot are speaking out against the certain result of this kind of "sanitation." All told, an inquiry into the whole affair by a committee of Congress bids fair to be fruitful.

The system of control which Congress exercises over the Post-Office involves the appropriation of all the money needed for the entire establishment every year, and the subsequent return of the gross receipts to the Treasury. Thus, Mr. Cortelyou accompanies his request for $12,000,000 more money for next year with the prediction that he will be able to reduce the postal deficit from last year's figure of $14,572,584. He proposes to keep the clerical force practically at its present size, and has economized somewhat in the special facilities of railway transportation. Increase, of course, is regularly to be expected in the general lines of the department work, and rural free delivery is naturally growing at a rate much beyond that of the rest, but the natural end of this would seem to be a condition of equilibrium in which all parts of the country fare substantially alike, and growth keeps pace merely with the increase of population. That may be the time for going to the fundamentals of the postal-deficit problem. At present, the unprofitable departments of the service are growing so much faster than the income-producing ones that predictions as to anything but the immediate future are not to be trusted too much.

Apart from the merits of the case, Midshipman Meriwether's trial at Annapolis brings out some amazing facts about the student "code" at the Naval Academy. Under it, not only have there been a score or more of pugilistic fights, under the rules of the prize ring, but official duty, not to speak of the obligations of a gentleman, has been steadily disregarded. The Annapolis "code," in fact, has many of the absurd features of the duello. There is the same perverted sense of "honor," the same compulsion to fight, the same wild notions about what the fight establishes. Thus, it was testified that these brutal encounters often resulted in "handshaking" and a general withdrawal of insulting epithets. It was said that Meriwether, after calling Midshipman Branch a "sneak," a "coward," and "no gentleman," discovered after twenty rounds that he was one of the finest fellows on earth. This is too fantastic to be allowed in an Academy where men are supposed to be taught realities. Apart from the fatal result in this case, the whole system, as disclosed, with its semi-barbarous and obsolete standards of personal honor, clearly calls for instant reform, and by reform we mean abolition.

Joseph Ralph Burton, United States Senator from Kansas, is reported to be somewhat depressed, and not without reason, for he has a second time been convicted of exerting his official influence in behalf of an enterprise which was using the mails to defraud. The first conviction was set aside on the purely technical ground that the payment to Burton was made outside the jurisdiction of the trial court. Burton threatens to appeal again, and he may conceivably succeed in having this second verdict set aside. While he is waiting for the decision of the higher court, he will enjoy the seclusion of private life. "Though he is still a United States Senator," says his counsel, "he will not take his seat. I do not believe this would be proper or dignified, and Senator Burton does not think so either." We commend Burton's modesty to the attention of two New York statesmen.

Of a certain kind of strenuous life, Gov. Jeff Davis of Arkansas is a most admirable example. It is not his fault if he is not now the idol of every bar-room, the hero of every prize-fighter and gutter ruffian. Monday's personal encounter in which he had his skull cracked by a pistol in the hands of ex-Congressman Dinsmore, was only his fifth fight within three years. He fought a draw with the Republican candidate for Governor in August, 1902; was knocked out by Judge Carroll D. Wood a year later; was prevented by friends from clinching with A. F. Vandeventer in October, 1903, and had another stand-up fight with Judge Wood in December, 1903. He was threatened with death by his Attorney-General in September of this year, but still survives to fight again—and, incidentally, to show the world how low a blackguard can become a Governor.

An experienced, not to say hardened, protectionist will only smile at the demand of the artists that they be no longer protected by the tariff on art. These gentlemen meet in convention in this city to declare that the tariff as it affects them is blind and behind the times; but what has that to do with the case? If proving our fiscal system both stupid and obsolete could have altered it, we should have seen it changed years ago. Protection does not object to hard names; call it what you like, provided you vote for the men who uphold it. Mr. Kenyon Cox asserted that the argument against the art duty is simply "unanswerable." We agree with him; so is the argument against a hundred

other duties, but what good does that do? Protectionists will let you have all the logical triumphs you want if only they may remain in control of Congress and keep the schedules intact. The standpatters have no desire to get the better of the argument; all they wish is to have the better of the voting in committee and on the floor. The situation would be different if the artists had a political following, or were in the habit of making large campaign contributions. In that case they would be an "interest" to be taken care of; as it is, they are, from the point of view of the protectionists with a grip on Congress and the President, merely a lot of amiable enthusiasts whose protests and appeals can be disregarded with perfect safety. The truth is, the protectionists maintain that the moment an American citizen is allowed to buy a French painting without paying a tax on it, the schedules on imitation jewelry, steel rails, and pickled sheepskins will go toppling down; that notoriously the middle-class American regulates his expenditures for underwear, crockery, and garden hose solely with reference to the price he has paid for the oil paintings in his parlor. If that schedule is touched, all the others must go too.

It seems to have been expected by almost no one that the anti-cigarette laws passed by Indiana and Wisconsin last winter would ever be enforced. Yet the reports now coming from both those States indicate that neither one is being allowed to become a dead-letter. Whether this means that they are to remain permanently on the statute-book or will be repealed with alacrity, depends on the temper of the people. There is one point, however, in which such a law is to be distinguished from the prohibition of liquor. If a "blind pig" is accessible and properly supplied, a drinking man can imbibe there about as well as anywhere else. He is accustomed to resort to a special place for his potations. But the cigarette-smoker expects to indulge himself while going about his usual occupations. He has never expected to go to some retired place to smoke. Cigarette-smoking, in other words, ceases to be attractive if it must be clandestine, and therefore the law has, in this special aspect, a better chance of regulating it. And as the object of these laws was not to stop smoking in general, but this particular kind, every convert to the cigar or pipe is a living monument to the wisdom of the Western legislators. So, we may add, is the young Nebraskan fined $50 and costs recently for rolling, otherwise "manufacturing," a cigarette for his own use.

Boston is not so sure that her system of primary nominations is all that she thought it was. A fortnight ago the primaries for the selection of candidates for Mayor were held. Five men—two Democrats and three Republicans—had stumped the city, and roused more interest than has been shown in a municipal election since the late Mayor Collins put himself at the head of the Boston Democracy. Representative John F. Fitzgerald was the choice of the Democratic primaries, and Louis A. Frothingham of the Republican. But H. S. Dewey, one of the defeated Republican aspirants, became suspicious of the methods used by Mr. Frothingham's campaigners to secure a bare 300 plurality. A cry of fraud was set up and a recount demanded. The result was to cut Mr. Frothingham's plurality in half, and Mr. Dewey still insisted that he had been defeated by fraudulent votes, and announced that he would run as an independent candidate. Doubtless he is spurred on by Moran's success in winning election as District Attorney independently. But, to judge from the comments of the Boston newspapers, there is little likelihood of Judge Dewey's being hailed as a New England Jerome.

"Preserving the gold standard" is too good a phrase to be lost; we should incorporate it permanently in our political vocabulary. In 1896 the big insurance companies were paying $50,000 each to the Republican campaign fund in order to preserve the gold standard. In 1900 the standard still seemed to be in danger. In 1904, ordinary men ceased to have apprehensions; but the far-sighted presidents of our insurance companies continued to see the menace on the distant horizon, and cheerfully handed out the $50,000—taken, as usual, from the pockets of the policyholders. Nothing but the salvation of the country and the preservation of the gold standard, they assured us solemnly, could have induced them to contribute to a political party. They regarded State issues and local issues as beneath their notice. On November 21, however, Senator Thomas C. Platt testified in effect that he had a little gold standard of his own which he was preserving very industriously. He was not interested in the national but in the State, campaign; and yet the Equitable paid him $10,000 a year, and the Mutual often gave as much. President Richard A. McCurdy, by the way, who swore that the Mutual did not give to the State campaigns, was the man with whom Platt had dealings. Platt is not the only man who had a gold standard. The Equitable has carried on its payroll for twenty-three years an old Tammany politician, Thomas Coman, at a salary ranging from $2,000 to $6,000. His duty has been to preserve the gold standard of individual officers of the company, and he mentioned specifically Mr. Alexander, Mr. Hyde, Mr. Tarbell, and Mr. Jordan. He would keep these gentlemen on good terms with the city government and get their tax assessments reduced. For such eminent services to the country $6,000 a year from the money of the policyholders was a miserably small reward.

The testimony of Mr. George W. Perkins on Monday did not reveal him in an absolutely new light—it was of a piece with what had gone before; but it was astonishingly replete with evasions, shifts, doublings, reluctance to come to the point, hollow excuses, pretences, and finally the most damaging admissions. Here was an enormous fiduciary business managed in the spirit of a Bowery shop for second-hand clothing. Deceit and misrepresentation were the chief stock in trade. The public was bamboozled, the Superintendent of Insurance was hoodwinked, the policyholders were deceived and cheated. Accounts were doctored, minutes of important meetings were falsely kept, blackmailers were allowed to bleed the company at will, political contributions were made under lying entries in the books, and the whole vast system of irregularity and crookedness and graft covered with a thin veneer of the most disgusting hypocrisy. Mr. Perkins and his fellows have made themselves impossible. They have forfeited all respect, and must lose their trust positions. If any of the trustees of either the Mutual or the New York Life think that their business can be saved except by the most radical changes of personnel, they are living in a fool's paradise. Why, policyholders by the thousand are turning to Tom Lawson in preference to McCall or McCurdy or Perkins! That is only a hint of the desperate situation which requires desperate remedies. Public confidence can be restored only by dismissing the men who have destroyed it.

Mr. Tarbell's views in the matter of deferred-dividend policies are such as would naturally be expected from the head of a life-insurance company's agents. Mr. McCall, in his testimony of October 7 before the Armstrong committee, defended the "twenty-year policy," and expressed his objection to "straight life" annual dividends, on the ground, very largely, that to get good solicitors the company must pay good commissions, and that agents' commissions on a deferred-dividend policy are much larger than on ordinary life-insurance contracts. This argument would naturally appeal to an officer whose duty it is to "show results" in new insurance. Mr. Tarbell undertook, however, to set forth arguments in defence of the deferred-dividend principle itself. Briefly, his points are that such policies, maturing at a stated date, add to the safety of insurance by the large surplus funds accruing in the interim; that they pro-

vide for the family when the policy matures; that they are cheap insurance, because no dividends so high can be paid on the annual basis; that they attract "good lives," because men not in good health would mistrust their chance of surviving to get the benefits of the "pool"; that they induce men to insure who would not insure if a "death risk" alone were the basis of their insurance; and that they do not lapse as "straight life" policies often do.

These arguments do not impress us. To say that withholding dividends for twenty years, and then paying them in a lump, adds to the safety of insurance, begs the whole question. If the funds reserved against such accruing dividends are calculated merely on the basis of safe insurance, then the company as a whole is protected neither better nor worse than it would have been without them. On the other hand, if the monstrous evils, extravagance, and corruption of which our great companies have been guilty, do not lie directly at the door of the abnormal surpluses thus accumulated, then the Armstrong committee's researches have been in vain. As to the second point, a "twenty-year policy" at least provides no better for a family than a savings-bank account maintained by similar payments during the same period; it is capable of proof, indeed, that its provision is far less adequate. That these policies, with their excessive charge for premiums and their exceedingly meagre return of accumulated dividends, are the cheapest form of insurance, we had not supposed even Mr. Tarbell would seriously contend. If allowance he made for those who lose all their dividends through death in the period prescribed, we take it to be the most extravagant form of insurance in the field. Mr. Tarbell's other arguments hardly call for answer. Our own view of the matter is summed up in the Frick report's conclusions, which we have quoted heretofore; we may add, with approval, the following remarks, addressed to the Insurance Commissioners' Convention last September by Insurance Commissioner McGivney:

"The purpose of a mutual life-insurance company is not to have its members gambling on the misfortunes of its other members. The deferred-dividend plan is the medium of building up large surplus funds which are not required by law to earn any interest; it furnishes a ready means to make up losses from extravagance and waste, and is a temptation to the management for hazardous and risky speculation in the policyholders' funds."

"'For ways that are dark,' but for tricks that have not been vain, commend us to the insurance grafters. John A. Nichols received for some years $1,000 from each of the three great companies with which to stop the mighty pen of the "rantankerous friend" at Albany, W. S. Manning. But the latter swears he got of late only a miserable $300 annually as his "legal" retainer. Profit for Nichols, just $2,700 a year. As for the mighty McCalls and McCurdys and Alexanders, this leaves their boasted business ability in a sorry light. Any up-river graybeard with a sanctimonious air could stand them all up against a wall and make them hold up their hands while he extracted from their pockets just what he wanted. So easy was this game that it makes the trade of a blackmailing society editor seem like an elaborate business transaction. But the magnates knew their methods were crooked, and so they paid every one who came along to save themselves from exposure. Assemblymen, strikers of the Manning type, avaricious lawyers, United States Senators—all knew a good thing when they saw it, and worked their mine for all it was worth. What mattered it if the money was stolen from men and women who toiled and slaved and saved pennies to pay premiums? The woods were full of them; the agents roped them in by the hundreds; surpluses piled up; the State Insurance Department connived willingly, no danger was in sight, and all went merrily. Is it any wonder that the McCalls and McCurdys have a sense of deep personal injury at the thought that their little paradise has been rudely invaded?

There will presumably be considerable manœuvring for position between the Liberals and the Tories before the impending dissolution and general election. If Parliament were in session, the King would no doubt send for Sir Henry Campbell-Bannerman and ask him to form a Ministry. Then the budget would be passed and the appeal to the country made. But Sir Henry is too old a bird to be taken in the net which Mr. Balfour is now spreading before him—the suggestion, that is, that he form a Government in the dark, drift along till February, then suffer a vote of no confidence in the House and be compelled to dissolve. He will refuse, unquestionably, to fall in with the strategy of the Tories in that way. They must either do their own dissolving, or stagger on under a still heavier burden of discredit. Of the outcome of the general election, there can be no reasonable doubt. Chamberlain talks valiantly about "closing up the ranks" and getting rid of "blunt swords," but such advocacy of a snug little party all of one mind is folly in an appeal to a great electorate where, as Lord Hugh Cecil remarks, success is "a matter of nose-counting, and each free-fooder has his nose." The signs all point to a crushing defeat of the Chamberlain policy in the election of the new House. The argument has been strong against it; trade-returns still stronger. Chamberlain himself expects to be beaten in the first onset. His hope is that the Liberals will make a mess of it in office, and that, after a couple of years, his second chance will come. All this is in the lap of the gods; the only certain thing is that the great issue is soon to be put to the electoral test, and that, whoever may hereafter lead the Conservative party in whatever paths, we are now witnessing the passing of Arthur Balfour.

The executive committee of the Zemstvo Congress, in pledging its support to the Witte Cabinet, "so long as it follows the path for the accomplishment of the liberties promised by the manifesto," gives encouraging evidence that Russia has advanced far on the road to liberalism. The force of events, which is daily converting conservative leaders and journalists into adherents of the new régime, is not lost upon Witte himself. He appears sincerely intent upon gathering around him men who enjoy the confidence of the Liberals. Only four years ago, there appeared in Stuttgart a secret memorandum (in Russian) by Witte, then Minister of Finance, on "Autocracy and the Zemstvo," in which he attempted to prove that, "under an absolutist government, the labor of the social forces is incomparably more productive to the country and the people at large than it can be under a parliamentary Government." To-day, as the Premier of a Liberal Ministry, he promises universal suffrage and the widest possible concessions to the toiling masses throughout the land. His conversion is evidently accepted as genuine by a majority of the zemstvo leaders, though the Moderates—"Octobrists," as they significantly call themselves—declare that Russia is not ripe for a constituent assembly.

Among the men who enjoy alike the confidence of Count Witte and the zemstvoists there are not a few eminent names. Prince Urusoff, Witte's first choice for Minister of the Interior, a prominent Liberal, was formerly Governor of Tver, but resigned under the Plehve administration. Prince Eugene Trubetzkoi of the University of Kiev is now one of Witte's trusted advisers. Prince Volkonsky, M. Stchepkin, and Prince Paul Dolgoruff, long identified with the reform movement, are wielding great influence in the Congress; and even M. Petrunkevitch, the president of the Moscow Agricultural Society, a former exile in Siberia and a Radical leader, declares the restoration of order to be the first duty of the hour. But probably the most difficult problem that confronts Witte lies in the vacillation of the Czar, which is certainly, in this seething time, more excusable than ever.

"SOLICITOUS ABOUT NEW YORK."

If the President, and every other Republican with a shred of decency, were not, as Mr. Roosevelt writes that he is, "very solicitous about the political conditions in New York," they would be both stupid and callous. Apparently, the President had in mind only the sordid quarrel between Odell and Platt. But last week's testimony by the latter unreverend corruptionist, before the insurance inquiry, carries us far beyond that. We have now a full revelation of the way in which the Republican party in New York has been for years a political bawd, selling itself for money. Corruption has been its daily bread. It has lived upon dishonesty, thriven upon blackmail, and grown great on bribery. We now see that its Legislatures have been made up of men hired to do dirty work, its Governors more or less consciously the tools of thieves, and its United States Senators common carriers of rottenness. Senator Platt frankly took off the manhole cover and showed us his party sitting in the sewage.

Republicans, from the President down, must feel disgraced as well as astonished by Platt's cynical admission that the party has lived in this State by bleeding corporations and robbing widows and orphans. But what is to be done about it? Restitution, we suppose, cannot now be made, but the promoters and beneficiaries of the shameless corruption can be whipped from public life as they already are expelled from the society of decent men. We for our part can see nothing for it but at once to call upon Platt and Depew to resign their offices. They have brought disgrace on the State; the people of the State should demand that they no longer flaunt their infamy in the Senate. Even in that body their presence would hereafter be regarded as infectious; even its indicted or convicted members would say that their punishment was greater than they could bear if they were held to have sunk so low as Platt and Depew. With those two spokesmen in the Senate, New York is not only misrepresented, but made a hissing. Neither of them can show himself in his seat without having every finger in the galleries pointing to the outward sign of New York's deep disgrace. The unbought and self-respecting press of the State should take this up immediately. Honest citizens should lift up their voices. Petitions should be sent to the Legislature. Gov. Higgins should be addressed; does he not care that New York is made a by-word and a reproach by its two United States Senators caught in the political stews? Platt and Depew must go. Their co-parceners in corruption—the insurance officials—are being driven out; so must they be. It will not do to fall back and leave it to nature soon to snuff out the flickering flame; indignant New Yorkers must see to it that its last ghastly light is not made to reflect upon the fair fame of the State.

President Roosevelt has an imperative duty laid upon him. One striking way to show his disgust with Platt's confessed villany is to break with him openly now. The hoary blackmailer and trafficker in legislation ought never to be seen in the White House again. If he will not resign, and has business to transact, the President ought to compel him to do it by letter or messenger. The hand of Theodore Roosevelt should never again be laid in that of Thomas Platt. Here is a real chance for ostracism—social and political—and the President will be on the defensive if he does not apply it to Platt. Nor can Mr. Roosevelt or his friends allege that this corruption does not touch his white garments. That, indeed, may be alleged of the trust funds obtained last year to elect him President. But how about 1898, when he was elected Governor? That was a close-fought campaign. Mr. Roosevelt's plurality was narrow. Yet in that year Platt was boss, he was collecting his $10,000 from the Equitable, his $10,000 or whatever it was from the Mutual, and (as the *Tribune* has asserted, defying Platt to sue it for libel) blackmailing corporations promiscuously. Mr. Roosevelt, moreover, went to consult Platt about the conduct of the campaign. He startled his best friends by recognizing the boss as rightful leader; so that a peculiar obligation rests upon him to clear his own skirts, and to come to the rescue of his own State, by aiding or leading in every movement to rid public life of the Platt poison.

It is not strange that Platt's habitual defenders and lauders are struck dumb. All the old talk about his "wonderful sagacity" and "unsurpassed management" and "extraordinary power of attaching to himself devoted followers," is now put in its right place. It always was absurd to the eye of reason, and now the dullest can see it to be so. Platt a statesman, a leader! He is simply a "striker," a blackmailer, a purchaser of votes, a seller of nominations and of legislation; carrying the bag, he has carried the party in it. Paymaster-General of the forces of corruption, he has held himself in power by precisely the same means as Croker. And how foolish, in the light of his own confessions, appears the common remark: "Well, at any rate, none of the money which Platt handled stuck to his own fingers." How can that be known? He has had millions given to him, and he himself states that he has kept no accounts. He could do with the money what he pleased. There were no tell-tale checks; it was, as he testified, cash by special messenger. From the insurance companies alone he appears to have had more than $500,000 in the last twenty years.

Well, we cannot stand about holding our noses. We must fall to disinfecting. Here is a work of sanitation before the President greater and more urgent than anything which confronts him at Panama. And the first step should be to retire Platt, Depew, and Odell, so that they will no longer be in control of the corrupt management of the Republican party, both receiving and giving infection.

A LITTLE INSURANCE HISTORY.

The reappearance of the name of David B. Hill in connection with life-insurance affairs recalls an incident which took place while he was Governor of New York. In the year 1880 the State Legislature passed a law to tax life-insurance companies. It imposed a tax of one per cent. per annum on the gross amount of the premiums, interest, or other income (except from rents), received by such companies of this State from persons residing in this State, or from investments represented by, or based upon, property situated in this State. This act was chapter 534 of the Laws of 1880.

The companies paid the tax until somebody discovered that it might be unconstitutional. The State Constitution provided that every law imposing a tax should state the object to which it was to be applied. The law of 1880 did not do so. The amount received from the tax had passed into the Treasury and had been appropriated to the general expenses of the State. The companies thereupon ceased paying until the arrears amounted to $1,000,000 or thereabouts. Meanwhile, the Legislature had passed another tax law without any mention of the object to which the revenue should be applied. This was the collateral-inheritance law. Under this act a case arose in the courts almost immediately which was destined to settle the dispute. Mrs. Mary McPherson died, leaving a will containing bequests to other persons than her direct heirs. The taxing authorities demanded the portion due to the State, which the executors refused to pay, on the ground that the law fixing the tax was unconstitutional, since it did not state the object to which it was to be applied. It was at once perceived that the decision in the McPherson case would cover the question raised by the life-insurance companies. Accordingly, its progress was watched with great and growing interest, and it came to pass that before it reached the Court of Appeals a dozen or more of the ablest lawyers in the State ranged themselves on the side of the McPherson heirs. The fees of these lawyers, if charged at the usual rates, would have swallowed up the estate in controversy several times over, and the natural inference was that the life-insurance companies were fighting the battle of the McPherson heirs.

The case was decided in favor of the State in February, 1887, without a dissenting voice. The court held that the provision in the Constitution which required that every law imposing a tax should state its object, applied to the annual recurring taxes known at the time of the adoption of the Constitution (1846), *i. e.*, the general property tax, but did not apply to the special taxes subsequently devised and enacted. It was absurd to suppose that the State could not reach new sources of revenue without specifying in each instance how it should be apportioned among the several objects of public expenditure. This case is known as "the matter of McPherson" (104 N. Y. 306). When the decision was announced, it was generally assumed that the delinquent companies would pay the back taxes due to the State, but no such thing happened. A bill was forthwith introduced in the Legislature, then Republican in both branches, not only to release them from the arrears, but to repeal the law of 1880 altogether, and this movement gained such headway that the State Comptroller (Hon. Alfred C. Chapin), in order to save this source of revenue for the future, proposed a compromise, relinquishing one-half of the arrears and keeping the law of 1880 in force. Charges of bribery and corruption began to reach the newspapers from their Albany correspondents, and these rumors worried the supporters of the bill not a little, but did not stop the measure. Comptroller Chapin's bill was voted down and the repealing bill was passed by both branches. It is chapter 699 of the Laws of 1887.

Undoubtedly some votes were cast for it honestly; some men voted for it then who would not do so in the light of recent revelations. Senator Fassett, for example, supported it on the ground that the money released by the State would, in the case of the three leading companies (the Equitable, the Mutual, and the New York Life), enure to the benefit of the policyholders, who ought not to be taxed. The possibility that the State might lose the money, and the policyholders lose it also, had not presented itself to the Senatorial mind. Moreover, the superstition that policyholders ought not to bear any part of the burden of government was stronger then than it was in 1880, or than it is now. Making all possible allowance, however, for the simplicity of legislators who voted to these rich companies a million dollars actually due to the State Treasury, and many other millions to become due, there can be no doubt that this bill was "handled" by such characters as "Judge" Hamilton and "Al" Fields, backed by the use of money.

The bill passed the Senate on the 19th of May, and went immediately to Governor Hill, who took a long time to consider it. Not until the 25th of June did he make up his mind what to do. Meanwhile, the Legislature had adjourned. If he should simply withhold his signature, the bill would be dead, and the Comptroller would forthwith collect the back taxes. The companies must have been very much in the same state of mind as the Mercantile Trust Company was last year, with the Ambler bill hanging as a sword of Damocles over its head. But the Governor made up his mind at last that it was a good bill and ought to pass. So he signed it. And now we learn that in 1895, while he was a Senator of the United States, Mr. Hill received from the Equitable Life an offer of a retainer, which he accepted with thanks, saying that it came very "handy" at that time.

FOOTBALL REFORM BY ABOLITION.

Never before has a football season ended amid such a well-nigh universal chorus of denunciation of the game, or with such a record of fatalities. At last our college presidents have found their voices; some of them at least have got beyond the fear of losing students by attacking what has become an intolerable evil, and are ready to follow President Eliot's lead in demanding a change. Thus, President Wheeler of the University of California declares that the game "must be made over or go"; President Hopkins of Williams feels that the game is doomed unless it can be radically altered; President Schurman thinks it time for the college presidents to act; and Chancellor MacCracken has asked President Eliot to call a conference of the heads of our educational institutions. But the best utterance of all is that of Prof. Shailer Mathews, dean of the Divinity School of Chicago University, who thus states the truth:

> "Football to-day is a social obsession—a boy-killing, education-prostituting, gladiatorial sport. It teaches virility and courage, but so does war. I do not know what should take its place, but the new game should not require the services of a physician, the maintenance of a hospital, and the celebration of funerals."

There is danger, however, that, in the multiplicity of denunciation and of plans for reform, the true nature of the evil may be lost sight of. For instance, the proposed changes in the eligibility rules, to guard against professionalism, suggested by the repentant sinners of the University of Pennsylvania, are likely only to distract attention from the main issue, even if their inspiration is from within the White House. The question of injuries and deaths, too, serious as it is, has become now of smaller importance—merely incidental. It is, of course, most gratifying to read such straight talk as has come from Dr. F. R. Oastler, in charge of the Columbia squad. Most surgeons of athletic teams have been content to drug and stimulate the players, to patch them up so that they may enter the fray again, even at the risk of their lives. This physician has had enough of silence, and demands the abolition of the game. "I have been," he says, "surgeon of the Columbia team for six years, and I think it is the most brutal exhibition I have ever seen or heard of to call a sport. The players go on the field expecting to be hurt, and are glad if they come off with nothing worse than a broken bone."

The real question before the public to-day is whether it is worth while to attempt to modify the game, or whether it should not be abolished forthwith. For twenty years modern football has been on trial in one form or another, and it has gone steadily from bad to worse. It has been shown beyond dispute in these columns, as well as in the pages of *McClure's Magazine*, *Collier's Weekly*, *Public Opinion*, and in newspapers all over the country, that the following evils have come in the train of football: (1) the introduction of paid athletes and bogus students, such as teamsters and ex-prizefighters; (2) the demoralization of the secondary schools by the recruiting sergeants of the universities; (3) the use of unfair and immoral methods to win games; (4) the steady increase in the gambling and betting features of intercollegiate contests; (5) the ever-growing danger of injuries from mass plays; (6) the demoralization of the student body by false standards of what is honorable and dishonorable in athletics, and the utterly disproportionate emphasis placed upon athletics as opposed to mental training. This indictment itself would seem to be enough to make the end of the game inevitable. But there are still other facts to be recorded. College presidents and faculties have everywhere been terrorized by student opinion. "The boys have wanted the game," and desired to win at any price. Hence the college authorities have abdicated their proper functions, always trembling lest a radical stand decrease the enrolment and drive students to a rival institution where teams, mayhap, have won three or four years out of five. Even at Harvard there are timid souls who ask whether this year's decreased attendance is not perhaps due to President Eliot's hostility to football. At any rate, the loss of students seems to them to make this time "inopportune" for the greatest American university to win fresh prestige by uprooting this athletic evil

Professor Mathews is right. Football has become a "social obsession," from which education has suffered terribly. We hear of instance after instance in which preparatory-school pupils are forced to play by their teachers, often against their own and their parents' wishes, and under penalty of ostracism. In Harvard it is notorious that football has now become the best and easiest way to enter the undergraduate socie-

ties. Your "grind" may rank as high as he pleases in his studies; it is the fellow who has broken an arm in a scrimmage who has the plaudits and the admiration of his mates, and before whom the doors of the chapter houses swing open as if by magic. To say that this obsession can be cured by ignoring the fatuous rules committee, and deciding whether there shall or shall not be "offside interference or mass plays," is like turning a hose on the roof of a building when the first floor is in flames. Football has become not merely intolerable in itself, but a grave menace to American scholastic ideals and development. As such it should go forthwith. There is no time like the present in which to right this wrong. A few schools and small colleges have abolished football, but its death-blow must come from such an institution as Harvard or Columbia. There should be no lack of rivalry for the honor, and no time wasted in considering how the game can be "radically altered" or "made over."

"FUNDAMENTALS" IN COLLEGE.

The Harvard Overseers' Committee on Reports and Resolutions, Charles Francis Adams, chairman, has recently propounded a question which should set college men to thinking. The committee asks whether, "under conditions exacting some measure of retrenchment," it is better "to impair the efficiency of the fundamental courses of instruction, pursued by large numbers of students, or to effect the necessary economies by reducing the number of special courses." The committee had before it the needs of the English department. According to a report made to the Overseers by the Committee on English Literature, the allowance for this department was cut $9,800 in 1904-05. "The practical result of this economy," says the committee, "has been the reduction in the number of courses provided, and a curtailment in the force of assistants requisite for proper supervision of the men in the large courses." The Committee on English supports its case by particulars, and concludes that "the department is at present undermanned, to the detriment of the students in the large courses and of the progress of the Graduate School."

Mr. Adams's committee, accepting the statements in this report on the English department, directly raises the issue as to the educational policy involved. The English courses are "elementary and fundamental," "attended by no less than 2,131 students," while there are many special courses attended by but few students or even by single students.

"Referring to the experience and policy of Yale, under similar circumstances, it has been stated that, of a total number of 181 courses, it was there found that 70 were taken by fewer than ten students each; 36 by fewer than five; 8 by fewer than three; and 11 by a single student each only. Under these circumstances, the total number of courses in the Yale programme was, as a measure of necessary retrenchment, reduced from 263 to 249, and of the 249 remaining courses it was stated that 'between 50 and 60 would be cut out unless a sufficient number of students elected them to make it worth while giving them.' "

Other colleges, we may add, have, in periods of stress, been forced to make cuts quite as vital. Mr. Adams's committee does not undertake to answer the question which it brings forward.

Were a college a factory, Mr. Adams could not hesitate to reply in seven words, "Cut along the line of least resistance." But a college, though its business needs the most skilful management, is not a commercial enterprise. For example, the head of a factory or a store must think twice before incurring a deficit; the president of a college must think twice before not incurring one—for the administration which always keeps within its income will stand still. President Eliot's deliberate plan, if we may judge by appearances, has been to press steadily a little beyond immediate income. Thus he has been able to show conclusively that more money can be profitably spent by Harvard, and make an irresistible plea for it. Had he always crept along cautiously, never taking chances, Harvard would now be where it was two decades ago. Occasionally his advance has been slightly retarded by successive deficits; but in general he has led the way, and the friends of Harvard have responded to his call.

A similar principle must be applied to the solution of the problem which Mr. Adams outlines: If a college cannot afford terrapin—to borrow the happy phrase of an insurance officer—must it forthwith restrict its diet to tripe? No college can permanently cripple the large "stock" courses. In the long run, these must be creditably maintained whatever else is lopped off. But that is not to say that temporary crippling is not now and then justifiable. One of Harvard's sources of strength, for example, is the group of advanced courses, attended by but few students, which perhaps no other institution is prepared to offer. These cannot be supported indefinitely at the expense of the large courses; but for terms of two or three years Harvard might suffer less in prestige and that leadership which is its glory, might contribute more to the cause of education, by carrying on certain special courses for the few till money is found to man them. There can be no hard-and-fast rule. College authorities must weigh the value of the large courses to be sacrificed for the moment, and of the small ones to be saved, and must settle the individual case on its merits.

The effect on the teaching force must also be taken into account. The instructor's mind becomes deadened by repetition year after year of the elementary and fundamental courses. He must have an opportunity for expansion and refreshment in the small advanced courses, devoted perhaps to research. One reason why teachers in secondary schools tend to mental atrophy is that they are steadily held down to tripe, with seldom even a sniff of terrapin. This view is forcibly presented by President J. G. Schurman of Cornell in his last annual report just from the press. "No man," he says, "can do valuable original reflection if he is always wearied with lectures and teaching." President Schurman would therefore make provision "for reducing the time demanded for the instruction of students from professors who are exceptionally qualified for and devoted to the work of original investigation." This change, as President Schurman notes, no less an authority than Lord Kelvin declared to be the most imperative called for in our American university system. Thus, in economizing there must be considered the possibility of impairing the efficiency not merely of the fundamental courses, but of the teachers themselves. In short, the abilities and the temperament of individual instructors must be seriously regarded in formulating the scheme of retrenchment.

JAMES DAVIE BUTLER.

There passed away in Madison, Wisconsin, on November 20, the "first citizen" of that university town, known and beloved of all, and whose home was thronged on every succeeding birthday; who attained his ninetieth year on the 15th of last March, and, being chaplain of the Senate, was honored by that body with roses and the spreading of his response upon the minutes. Dr. Butler was then entering on the twenty-fourth year of his connection, as a literary contributor, with the *Nation*.

"To-morrow," he wrote to us on November 14, 1904, "closes the second third of my ninetieth year. The third third of it has been the end-all of two of my longæval male kindred; and how can my span outrun theirs? Yet my joy in *existence* is like the *gaudia certaminis*, while study in all lines rouses in me a higher joy than existence can ever yield. Thanks to being near-sighted, I have never used or needed in reading or writing to 'succor old age or any age with subsidiary sight.'

"In politics, always a Mugwump, I sit here a central peace subsisting at the heart of endless agitation, Vilas and Spooner—both neighbors of mine! I live half-way between each, and no more than a block from either, and recall my Ægean sail between Athos and Ida, each in plain sight, and that with a pilot who, as a boy, had been 'prentice to his father at Navarino—which was long after I began to promote Greek Independence in my own person."

In truth he was just six years old when the Greek Revolution broke out and fired the sympathetic imagination of this country, prompting Dr. S. G. Howe to join Byron. "As a boy of seven," wrote Dr. Butler at eighty-five, "I was arrayed in a specimen Greek dress, and sent to every house in Rutland [Vermont, his birthplace], to

call the women together and make garments for the naked children of the Sciots"—consequent upon the Turkish island massacre in the spring of 1822. There was a prophecy in this, for, after graduating at Middlebury College and taking the theological course at Andover, and filling Congregational pastorates in his native State and in Massachusetts, he became professor of Greek at Wabash College, Crawfordsville, Indiana, from 1854 to 1857, when he was drawn to Madison, and from 1858 to 1867 occupied the corresponding chair at the Wisconsin University. His first European tour was made in 1842-3; and as he returned poor, he took to lecturing, dispensing widely the fruit of his observations as a traveller, with few rivals in the field. He never lost his roving disposition. He celebrated his fifty-third birthday by climbing Mt. Tabor, in Palestine; the next year, 1869, we find him scaling the Yellowstone Park with John Muir, his quondam pupil. At seventy-five he made the circuit of the globe alone, and in 1890-1 was writing letters to this journal from the Inland Sea of Japan and from Fatehpur, India.

Always Dr. Butler returned joyfully to his study and to the freedom of the Wisconsin State Historical Society's Library, his daily mile-end walk up to his ninetieth year. He was for upwards of thirty years the Society's curator. He had been admitted a member of the American Antiquarian Society at Worcester, Mass., in April, 1854, and a more genuine or catholic antiquarian has never been gathered into that company. He made some noticeable, published researches into portraits of Columbus; he published 'Hapax Legomena, or Words used once for all by Shakspere'; he discussed the census, the rainfall in Wisconsin, Washington's tutor, Raphael's Hours, reindeer in Alaska. All that pertained to the Northwest and its early settlement interested him, and he flung himself with ardor into the Lewis and Clark revival initiated by the late Dr. Elliott Coues. He was a prominent figure in the movement to secure Sergeant Floyd's grave from the remorseless tooth of the Missouri, and to erect the present monument. His publication in the *Nation*, in 1893, of the prospectus of Frazier's Journal led to the reprint of Gass's rare Journal of 1811 and the finding of Floyd's and Whitehouse's, now available to all students.

In brief, Dr. Butler might be described as a *Notes and Queries* man *pur sang*. Above all, however, his passion was for words. On February 12, 1904, he wrote to us:

"N. E. D. [New English or Oxford] Dictionary has intensified my interest in linguistic in all lines, and I watch for each new section more than they who watch for the morning. It has helped me to live long, and will help me to live longer. It must illuminate, or at least give glow-worm glimpses of, the dark backward and abysm of time."

His saturation with the language of Scripture, of Shakspere, and of the Greek authors oozed up in his writings, giving a characteristic quaintness to his style; sometimes, no doubt, too redundantly. He began to write for the *Nation* towards the close of 1881, significantly with a Note on the fifth volume of the Catalogue of the Wisconsin Society's Library; and the Note was his favorite, though not exclusive, vehicle for nearly a quarter of a century. He both volunteered his contributions and accepted or bespoke books for review, the very last of these being 'Coryat's Crudities.' His review of that work was unique in the *Nation's* annals, as having been the product of a full nonagenarian. He was in general as prompt and as much to be depended on as the average contributor, but on this occasion he offered an apology. In his still bold hand he wrote—for the last time but one—under date of July 7, 1905:

"It was my purpose to dispatch this article as soon as my last had been published, if not even sooner. Nor would I have failed to do so but for a complication of clogs such as never before have fettered my activity. The chief of these were age and weakness, both used by doctors and daughters for hemming me in on every side.

"Further delay could not much modify my view, which, though novel, I hold to be the most credible—as well as creditable.

"It has not been my custom to quote paragraphs from the books I review, and those that now appear needful have been cut short. A paragraph on the *words* we owe to C., and the grounds of his coinage, looked desirable; but as to that and several others I felt silence imperative.

"Instead of my old saying, Add, subtract, multiply, etc., I will adopt C.'s *Excarnificate!*

"Regardfully,
"JAMES D. BUTLER."

Dr. Butler was of slight and wiry build, below the middle height, quick and active in his motions. In his New England stock was woven a Huguenot strain which might stand for vivacity and *élan*. His disposition was genial and kindly. Never had his circumstances been pinching, and both in body and in mind he enjoyed extraordinary freedom to explore the universe. In July, as above intimated, his first physical failing began. The decline was attended with a minimum of suffering, and his mind remained clear until a few days before his departure. He furnished an inspiring example of enduring mental fibre, sustained by contact with the world and by a boundless thirst for knowledge. We part with him with regret, a loyal and unfailing friend, an assistant *sui generis*.

IRISH AFFAIRS.

DUBLIN, November 12, 1905.

During the last six months, under the rule of Chief Secretary Long, there has been a return to the system of administrative worrying, petty persecutions, and prosecutions of Nationalists for alleged offences or breaches of laws supposed to be, or that had been in effect, obsolete. Under Chief Secretary Wyndham there had been a cessation of what is generally and vaguely known as "coercion." Professed sympathy with popular demands, profuse though unfulfilled promises, abstinence from irritating administration, helped to get the last Land Act passed with but little opposition and with insufficient criticism in Parliament from the Irish party. The effect of the Act has been to increase by nearly 50 per cent. the prices paid by tenants purchasing their farms; and, this object having been attained, the policy of conciliation ceased.

The Gaelic League is a widely spread and powerful organization, with hundreds of branches. It is non-political, but there is no doubt that it tends to foster and increase the spirit of Nationality. Numbers of towns and villages hold an annual "feish," or Gaelic festival. Irish singing, dancing, recitations, history, composition, plays, and games constitute the programmes at these festivals. The objects of the League are the fostering and preservation of the Irish spoken language, the study of Irish history and literature. In compliance with a generally expressed desire, and some political pressure, the Government a few years ago sanctioned the allocation of part of the educational grant to the teaching of Irish in primary schools as an extra subject and under very stringent limitations. This grant has now been withdrawn, nominally by the Education Commissioners, but actually by direction of the English Treasury. Consequently, the Gaelic League is in arms against British administration.

Contemporaneously there is a renewal of prosecutions for the technical breach of a law that requires the name of the owner to be affixed to all vehicles in legible letters. Fine and imprisonment for their non-payment have been inflicted for the offence in several Irish-speaking districts of having the owner's name on his cart in Gaelic letters. These cases are usually tried at Petty Sessions, where the presiding magistrate is a paid official holding office at will of the Government, his colleagues being of the local "gentry" class. The prosecutions are initiated by the police, presumably by the direction or with the approval of Dublin Castle. The practice hitherto has been to convict and fine as a matter of course, but recently a Mayo bench of magistrates, in a district where three-quarters of the people are Irish-speaking and Gaelic Leaguers, allowed common sense to prevail and dismissed the case brought before them. Notwithstanding this, the police prosecuted the same man in the following week, with the same result. A dismissal in a similar case was given in Galway; but in County Roscommon an offender fined the nominal sum of one shilling went to jail for three days sooner than pay it. In Wexford, for an unpaid fine of four shillings and sixpence for a like offence, the police seized the criminal's goods in the shape of books, but, as the proceeds of the sale amounted to only one shilling, another seizure will be made. In Dublin a merchant and Alderman named Cole was prosecuted for having his name on his carts in Gaelic letters. His goods were seized for non-payment, and the fine realized. Alderman Cole then substituted Roman for Gaelic letters, but retained the Gaelic spelling, "McCumhaill." Another prosecution was instituted before the Chief Magistrate of the Dublin Police Court, a skilled lawyer holding a practically independent office. He characterized the proceeding as "monstrous," "stupid," and "most irritating." The police prosecutors claimed that Alderman Cole had trangressed statutes passed in 1366 and 1465 which required the inhabitants of Ireland to "leave off entirely the manner of naming used by the Irish," and that every Irishman should take an English surname of a town, or color, or art, science, or office. The magistrate convicted and imposed a fine of ten shillings. Instead of deterring, these prosecutions tend to stimulate the Gaelic League to increased activity and to convert it into a political and anti-English organization. A prominent Gaelic Leaguer has just been sent to jail for five days in default of paying a fine of sixpence for refusing to take

out a dog license unless his Gaelic signature was accepted.

Other State prosecutions have been for the dissemination of anti-enlistment literature. The would-be victims of the Crown were youths who distributed leaflets and placards appealing to Irishmen not to enlist in army, navy, or police. The same sentiments have been over and over again expressed in newspapers, speeches, ballads, and often in sermons. On the occasion of the King's taking the coronation oath, which describes the Catholic religion as idolatrous, the Catholic Archbishop made a public appeal in the newspapers to Irishmen not to join the army and navy. "The Saxon Shilling" is a well-known and popular ballad. Similar sentiments find expression in England through the Quaker body, the Peace Society, radical newspapers, and in countless books with a wide circulation. Even if the authors of the leaflets had been known, it is unlikely that they could have been made amenable. However, the youths who posted these placards were duly committed for trial at the instance of the Crown, and were acquitted of publishing seditious libels by Belfast and Dublin juries; the only result of these State trials being the wider publication in the press of these "seditious libels."

These Government prosecutions cost a great deal, and the expenditure is charged on Irish revenue. Crown lawyers get very large fees, and no expense is spared to secure convictions. The Corporation of Dublin, which has to pay for, but has no control over, the metropolitan police, has asked that the expenditure of the police tax shall be audited and published as their other accounts are. It appears that within fifty years the amount charged by Government for the police has increased from $360,000 to $814,000, while the numerical increase of the force has been only thirty-eight men. The answer of the Government to the objection of the Corporation was an order by the Lord Lieutenant directing the sum claimed by the Corporation to be deducted from the payments made by the English Treasury to the local taxation account. Under the prevalent financial system, certain grants are made by the Treasury in aid of local taxation to the four divisions of the United Kingdom, England, Ireland, Scotland, and Wales. Any refusal to levy or apply local rates in the way prescribed by Parliament can be met by a withdrawal of these grants. This has been done in Wales, where the local councils refused to levy part of the education rate over the expenditure of which they had not adequate control. However, the protest of the Dublin Corporation, and its very reasonable demand for an audit of the police accounts, may be made effective by the Irish party in Parliament.

The unending land war is the occasion of many State prosecutions under the Coercion acts. Some recent cases illustrate the condition of affairs. Slattery, an old man, held a plot of land in Mayo under a lease for sixty years, granted by the father of the present landlord, who, alleging that his father had not power to give such a lease, succeeded in setting it aside, after putting Slattery, who had been in possession for thirty-nine years, to ruinous cost. Slattery was evicted, his sick wife being taken out of bed and left on the roadside; he had offered as a compromise to give up one-third of the farm and to pay the entire rent for the house and remainder of the land. An open-air meeting was held to express indignation, and appeal to the landlord to show mercy to the old couple, who, deprived of their home, had no refuge but the workhouse. The meeting was attended by police note-takers. John O'Donnell, member of Parliament for the district, spoke, saying that the landlord should seriously consider before refusing Slattery's offer, for no one would take the evicted farm, and the tenant would ultimately be reinstated. It should be noted that there is a special provision in the Land Act enabling the Land Commission to reinstate evicted tenants and make grants of money for rebuilding their houses. Slattery retook possession of his farm, and might have been prosecuted by the landlord under the ordinary law for trespass; but O'Donnell was prosecuted under the Coercion acts for making a speech calculated to cause social disorder, and condemned to three months' imprisonment. Slattery died, and a collection is now being made for the support of his wife.

In another part of Mayo a tenant owing £4 17s. of rent was evicted. The landlord's son and agent admitted that the rent had been punctually paid as long as he could remember. One Paden took the evicted farm. At a meeting held to denounce the eviction, two members of Parliament, J. O'Dowd and Conor O'Kelly, and a local magistrate named Mills, recommended that Paden should be boycotted; but they appealed to him in the interests of peace and good feeling to give up the farm. He consented to do so on payment of £26, which he claimed to have laid out on the farm. This was agreed to, but, before payment was made, the police charged Messrs. O'Dowd, O'Kelly and Mills before two "removable" magistrates with inciting to boycotting, and they will be tried under the Coercion acts at the next Assizes before a specially selected jury.

I will give one more example from the same county: Two small farmers, McAndrew and McHugh, were evicted on the same estate. McHugh's rent had been raised by the landlord from £4 to £14, and afterwards fixed at £9 by the Land Commission. After eviction, like a hunted rabbit, McHugh, a feeble old man, crept back into the house he had built. He was put in the dock, charged that "with force and arms and a strong hand, he had unlawfully interfered with the landlord's property." He and his wife were sent to jail, and the landlord had demolished the house, to prevent the family seeking shelter there again. McAndrew was sent to prison for a like offence. He is seventy-two years old, and, till a year or two ago, when he became crippled with rheumatism, he went year by year to England, earned the rack rent, and remitted it punctually to the landlord.

An example from a different sphere may be given of the tendency of the anti-popular minority to look for the aid of the Government to suppress exhibitions of popular feeling and to magnify trivial expressions of discontent into the crimes of sedition and disloyalty. The Royal University is an examining body with power to grant degrees to persons, both men and women, who qualify at the University examinations. There are no resident students. At the ceremony of conferring degrees, a number of students prevented the playing of "God Save the King." The Chancellor of the University, Lord Meath, a pompous philanthropist, convened the Senate and enjoined them to take steps for the discovery and punishment of the offenders. He intimated that Parliament would withhold its vote of £20,000 a year if such disloyalty went unpunished. This was a most unwarrantable and misleading suggestion, as the funds for the University are not voted by Parliament, but are derived from the funds of the disestablished Episcopalian Church. Parliament has nothing to do with giving or withholding the grant. The students replied by a manifesto published over their names, avowing their participation in the concerted demonstration, and stating that their protest was directed not against the King, but against the King's present Government, whose prime minister has several times publicly acknowledged the educational injustice under which Catholic students in Ireland labor, but has done nothing to redress it. The students further pointed out that the Senate possessed no disciplinary powers over them; that its functions were limited by its charter to holding examinations and conferring degrees upon those who qualified.

The Senate met, having summoned a few of the recognized offenders to attend. The students held a meeting outside the Senate House, passed resolutions affirming their grievances, and protesting against the misgovernment to which the country is subjected in the matter of university education. The attention of the police, a strong force of whom attended, was called to the illegality of the court which the Senate was holding, and its summonses; the holding of similar courts by the Land League having been held contrary to law. The speakers promised a renewal of their protest for next year. Lord Meath, the chancellor, did not attend; the vice-chancellor suggested that, as the University was not invested with powers to try or punish the graduates or undergraduates, and as the charges were very vague, it would be best to leave them to be dealt with by the legal tribunals of the country. The law adviser of the Senate concurred that it had no power to try or punish, and so the storm foolishly raised by Lord Meath might have ended. However, a majority of the Senate carried a resolution that a case should be submitted to the law officers of the Crown, and so the foundation is being laid for a State trial of over one hundred young men and women for riot, sedition, disloyalty, and such like crimes.

Cobden described the government of Ireland as alternately "patching and bayonets." It is so still. The short period of conciliation at the commencement of Chief Secretary Wyndham's reign was marked by profuse promises. Ireland was to be governed according to Irish ideas; political prisoners were released; an acceptable university scheme was to be established; coercion prosecutions ceased; grants for teaching Gaelic in primary schools were authorized; evicted tenants were to be reinstated; police expenditure was to be reduced and their mischievous activity curbed. This did not last long. Wyndham threw over Sir Antony MacDonnell, who had been engaged as conciliation agent; secret instructions paralyzed the action of the Land Commissioners. Under Chief Secre-

tary Long administration runs in the old groove. Local governing bodies are worried and harassed about matters of little moment; police interference in trifling matters is stimulated; members of Parliament visiting their constituencies are dogged and prosecuted. The present English Government is near its end. Will the Liberals do any better? At the beginning of last session the whole Liberal party supported John Redmond's resolution, declaring that

"the government of Ireland is in opposition to the will of the Irish people, gives them no voice in the management of their affairs, is ineffective and extravagantly costly, does not enjoy the confidence of any secton, is productive of universal discontent and unrest, and has been proved incapable of promoting the material and intellectual progress of the people."

Campbell-Bannerman, leader of the Liberal party, then said: "I defy the wit of man to give Irishmen any control, any effective voice, any management of their own affairs, unless there is an executive responsible to a body in which the elective element shall have the decisive voice." Within the last month John Morley, referring to the Liberal vote on Redmond's resolution, said: "I cannot believe that the new Parliament will run its course without any attempt to remedy so monstrous a state of things." Some of the Liberal leaders have, however, spoken in less satisfactory terms, and have shown an inclination to turn their backs on the resolution they supported, to treat it as a pious opinion, a question that may be postponed to a more convenient season. The Irish party and the Irish electors in England are not likely to tolerate such shuffling. At the approaching general election candidates in English constituencies, where there is any body of Irish voters, will be required to state specifically their views on the subject of Home Rule.

A general impression exists that, in view of the coming general election, the Government is seeking to evoke expressions of popular discontent, and even disorder, in Ireland on which to base an Anti-Irish and Anti-Home Rule appeal to the English electors.

AN IRISHMAN.

THE RUSSIAN PEASANT.—II.

SEVASTOPOL, October 16, 1905.

In Moscow there are something over twenty thousand droshky drivers, a large number of whom own their equipment, while many of them own several. The business has not yet been monopolized in the Russian cities as in most other countries. One result of this is that the droshky drivers favor themselves in stormy weather, so that those who depend upon them are likely, when needing them most, to be put to serious inconvenience. As yet there are no electric tramways in St. Petersburg, while in Moscow the electric system has been only partially inaugurated. In St. Petersburg one will find the regulation price for droshky service considerably less in winter than it is in summer and autumn, owing to the fact that so many peasants come into the city with their equipment after the crops are secured.

Not only is the agricultural population organized into Mirs, but artisans and fishermen also are generally organized, in their way. While it is true that labor unions such as dominate Western Europe and the United States have not come to prevail in Russia, it has long been the case that small organizations, known as "Artels," including from ten to twenty workmen each, have been generally prevalent. These, like the Mirs, are democratic organizations, electing their own foreman, who bargains for them, and with whom the employer finds it for his interest to deal. The recent great enlargement of manufacturing industries has brought about conditions to which the Artels have not become fully adjusted. The lack of the more comprehensive organizations is the cause to which many attribute the disastrous excesses of the recent labor troubles in Russia. In the fisheries of the Don and Ural rivers the smaller labor organizations have, however, been for a long time combined to secure the rights of all. For long distances up these rivers the fishing is begun simultaneously upon the firing of signal guns. The small organizations are operated upon a mutual policy, each individual receiving an equitable share of the results, and giving to the owners of the nets a proportionate share agreed upon at the outset. These various democratic survivals among the Russian people must be reckoned with in any scheme for promoting the progress of the people according to modern ideas. The Government at St. Petersburg is far from being omnipotent. The statesmen at the helm, even of an autocratic government, are compelled to consider carefully the nature of the element through which they are guiding their bark, and the fierceness of the storms which may be aroused by their own temerity. The Russian peasant is extremely conservative and very tenacious of his opinions.

Curiously enough, the Russian Dissenters from the Established Church (the so-called Raskolniks) do not furnish a progressive element, but, on the contrary, are most violently opposed to all progress. They are the champions of the *status quo* as it existed in the time of Peter the Great. They glory in the name of Old Believers, refusing to accept the least change in the Liturgy or in their personal habits. Notwithstanding frequent severe persecutions and the constant imposition of heavy disabilities, they have continued to increase until they number, according to the best authorities, more than twelve millions. The Raskolniks form a most peculiar element in the Russian population. They hold themselves entirely aloof from the Established Church, and maintain their own places of worship by voluntary contributions. Most of them, however, are orderly in their conduct, except in religious matters, and are extremely industrious and frugal, so that they have accumulated property to a far greater extent than the ordinary Russian has done. In some of the provinces they are the principal property-owners, while wealthy Raskolniks abound in the mining districts of the Ural Mountains and among the mercantile classes of the large cities. A large share of the steamboats on the Siberian rivers are owned by them. Their prosperity is partially, if not largely, due to their extreme opposition to the use of intoxicating liquors and tobacco. Their savings, due to their temperate habits, amount in the aggregate to a fortune. There are thousands of village communities in Russia and Siberia where the extreme Prohibitionists of America would find things after their own heart, since it would be impossible to purchase a drop of intoxicating liquor for love or money.

In the regular Russian Church service one will witness a marvellous spectacle of democracy, illustrating how susceptible the common people may be to the influence of truth when presented in æsthetic forms. Aesthetically, the Russian Church service has reached the height of perfection. The Liturgy, which has come down from the days of the "golden-mouthed" Chrysostom, is the most beautiful presentation of the sublime truths of Christianity which has ever been made. The symbolism accompanying it has been carefully studied to meet the wants of the most highly cultivated classes, while the music has reached a stage of absolute perfection. If one enters a Russian church anywhere, from St. Petersburg to Vladivostok, he will witness the service in the same perfection, and he will find himself in a crowded congregation, three-fourths of whom are men, and the majority of them of the working class, all of them suffused with tender emotion, under the combined influence of the music, the symbolism, the associations, and the Liturgy itself. There is no more democratic assembly in the world than one finds in the Russian Church. There are no seats. High and low, rich and poor, learned and unlearned, men, women, and children, all stand for hours at a time to share in the stream of emotion which is the natural result. This partly accounts for the remarkable musical development of the Russian people. From earliest childhood, the poorest peasant hears in the church the highest and best class of sacred music, prepared for him by the greatest musical masters. I was often struck with this elevation of musical taste among the common people while travelling through Siberia, on meeting the regiments, and on stopping over in the smaller cities. In Blagovestchensk, for instance, there was a local musical society which could with ease render the choruses of Saint-Saëns's "Samson and Delilah."

For all these things the Russian peasant loves his Church. It furnishes him what he wants. It adds to his life an element of idealism which most gratefully breaks the dull monotony of his daily life. It is a mistake to speak of the Russian peasant as priest-ridden. The Church is the object of his choice. The priest and his family are his companions and servants, carrying into the remotest settlements elements of culture which it would be impossible for him to obtain in any other way. It is affecting, in travelling on the Siberian Railroad, to see the people gather about a Church car, which stops upon a siding to furnish temporary provision for the religious wants of the settlers. This devotion of the Russian to his Church must be reckoned with in any effort to remodel the social and political character of the empire. The Russian Church has ever been the servant of the State and a main influence in promoting patriotism among the people.

Some other prejudices must also be reckoned with in all practical schemes for the remodelling of Russian society. Among the most important of these is that which is felt towards the Jew. Indeed, the Jewish

problem in Russia is more serious and more difficult to deal with than in any other country. It is in many respects much like that which faces the United States in its negro population. There are twice as many Jews in Russia as in all the rest of the world. They have mostly come into the empire by annexation of western provinces. In Russia, as everywhere else, the Jews are especially sharp in business bargains, and easily take advantage of the more simple-minded peasants. It is therefore almost impossible to avoid frequent collisions, which take the authorities unawares and lead to deplorable results. Until in the United States we can more completely put into effect our laws for the protection of the negro, it is in poor taste to blame the Russian Government excessively for its failure to anticipate and suppress all racial troubles which arise among its varied peoples.

Another prejudice not to be neglected in dealing with the Russian peasant is that which he entertains against any system of education which is forced upon him from the outside. In his attachment to his communal system he resents any interference with his affairs except so far as it may seem directly necessary for the preservation of the honor of the empire to which he belongs, and loyalty to which is summarized in his devotion to the Czar, its lawful head. It seems to many outside theorists a very simple matter for an autocratic Government to promote the education of the masses. But so long as the Czar recognizes the Mir with its long-established local authority, educational reforms can make but slow progress, since the medium through which they are carried into effect consists so largely of local influences. We have in America a somewhat similar condition of things in the Appalachian Mountain districts of the Southern States, where there are two million illiterate mountain whites who have been scarcely affected at all by the best-made State educational laws. The Russian peasant even more than the Southern white resents the interference of the general Government with what he considers his private affairs. He is strongly attached to the principle of local option. The Czar finds it hazardous to interfere with these local prejudices lest it diminish the loyalty of his subjects. In short, the Russian empire has an unwritten constitution which is as effective in its way as is the English.

In travelling from one end of Russia to the other, we have seen no indications of disorder or discontent. When in the centre of the empire, the disorders have been as far from us as were those in Colorado last year from Ohio. The disorders during the last four months have not appreciably affected the great peasant population upon which the stability of the empire depends. Nor do the peasants seem to interest themselves deeply in the elections to the approaching Duma. It it well known that interest in the Zemstvos fell off rapidly, owing to the peasants' fear that they would favor additional interference with the life of the village commune. They would rather trust the Czar than a parliament. When one takes into consideration this conservatism of the peasant of the great central provinces, and the heterogeneous character of the populations which have been brought under Russian rule by annexation, he will not be disappointed if parliamentary government makes slow progress for a while, Yet it is something that in the Duma it will really begin. The Anglo-Saxon, however, need not expect it to be wholly after his pattern.

JEHOL.

Jehol, China, September 29, 1905.

In 1860, when the Emperor Hien Fung fled from Peking before the advance of the allied French and English armies, he took refuge beyond the mountains in his summer hunting-palace at Jehol. Here he died not long afterwards, since which time this place has not been visited by its imperial masters. Nor have many European or American travellers had the curiosity to make the trip, which, nevertheless, well repays whatever slight trouble it may cost. The distance from Peking can be comfortably covered on horseback in five days, and by harder riding in four. The country traversed is for the most part mountainous and picturesque, the road is good enough as Chinese roads go, and the accommodations on the route are those of the usual Chinese inn. For the return journey one does well to take boats from Jehol down the Lan River till one reaches the railway line from Shan-hai-kwan back to Peking. This also is an affair of four to five days, and few experiences are more lazily agreeable than gliding with the stream in a flat-bottomed craft, propelled by the steady rowing of two men in the bow and one paddling in the stern, or every now and then hurried along by a rapid. The sights on the way are full of interest, for the Lan passes through some very fine gorges, where the crags beetle over the bubbling water below, and the hundreds of boats comfortably descending with the current or painfully being hauled up against it lend continual animation to the scene. In particular, the view through the river gate of the Great Wall is a thing to be remembered.

Jehol itself is a commonplace Chinese town nestling at the foot of a line of hills occupied by the park that contains the various imperial dwelling-places, kiosks, storehouses, and the like. Although the retreat was already used by the Mongol emperors, the wall of the enclosure was not built till the time of the present dynasty, with whom the palace is especially connected. It was here that in 1793 Lord McCartney, the first envoy sent by England to China, after following the Emperor K'ien Lung up from Peking, was graciously entertained by him at a feast in the garden. However, almost the only result of the embassy was an arrogant letter in which the Son of Heaven told George III.:

"As the requests made by your ambassador militate against the laws and usages of this our Empire, and are at the same time wholly useless for the end proposed, I cannot acquiesce in them. I again admonish you, O King, to act conformably to my instructions, that we may preserve peace and amity on each side, and thereby contribute to our reciprocal happiness."

Much has changed in China, as elsewhere, since these words were first written, and now Jehol has not been visited by a sovereign since the one who died there a fugitive nearly half a century ago; but, on the other hand, it is open to any tourist with a permission from the Foreign Office in Peking.

As might be expected, almost every portion of the buildings and grounds shows obvious signs of neglect and decay. The total effect, of old, must have been far more brilliant than at present, for most of the once yellow tiles have preserved hardly a trace of their imperial color which once made the roofs so bright; and the woodwork, too, although remarkably little affected itself, has usually lost its coat of paint long ago. In like manner, several of the short massive stone bridges are only passable, if at all, owing to the planks thrown loosely over the gaps in the middle; but still, when we remember the out-at-elbows condition of much in the actual abodes of Chinese royalty and of the shrines where they worship in state, like the Temple of Heaven, we are ready for anything in places deserted by them. What remains here is, first and foremost, the landscape architecture, with its combination of hill and dale, shady walks and grassy banks, lake, island, and grotto, graceful kiosks and charmingly shaped houses. The ten-storied pagoda, too, is architecturally pleasing, besides commanding an excellent view of the grounds; and in every direction the grass is alive with spotted deer, who, free from danger, are almost as tame as sheep. The Imperial storehouses excite the longest attention, for here are kept the household furnishings of the Palace, until they shall next be called into use. To be sure, the closed doors of these houses are sealed with mystically inscribed strips of paper; and as the windows also have paper panes, nothing in the interior would be visible were it not that everywhere many of these same panes are badly torn. All we have to do is to follow the example of the eunuch officials who are guiding us, and peep in at the piles of porcelain, blue, red, yellow, what not; the cloisonné work, the splendid screens, the lacquered tables, the chairs, the thrones, etc., etc., enough to make the collector's mouth water. All of these articles are covered with dust, and such as can fall to pieces of themselves are doing so; but still the great majority only need to be brought forth and cleaned to resume their proper place in the world. It makes one long for another imperial visit, when perforce the whole mass of this finery would have to be furbished up.

On the other side of the Palace Park from the city are the Lama Temples, the second great "sight" of Jehol. They are in charge of monks—in this case, Mongols—who, in their faded yellow dresses, loiter about them; and each has its own special attractions. The buildings are in an unequal state of preservation, although, of course, all are in the more or less advanced stages of the usual Chinese decomposition; Some of them are only curious, but others are really fine architecturally, and the internal decoration is often particularly good. In the Ta Fo S'Su (Great Buddha Temple) there is a colossal wooden statue of Buddha, said to be exactly the same height as the one in the Lama Temple in Peking; in the Lo Han Tang are five hundred and eight Buddhist worthies, gilt wooden statues of heroic size and of very considerable artistic merit; indeed, many of them have a great deal of expression, and as a lot they are far superior to those in the Temple of the 33,333 Buddhas

in Kioto, of which one is reminded. In the Hsing Kung (Imperial Travelling Palace) the distinguishing feature is the number of little figures of the Buddha in brass or clay. Just how many of these there are it would be hard to guess, but there must be several thousand. Undoubtedly, the most interesting of all the temples is the Potala, whose exterior is a reproduction on a smaller scale of its namesake, the residence of the Dalai Lama in Lasa. As one gazes from below at its great bare rectangular shape, familiar to us from the pictures of its model, for a moment one has the illusion of actually being in the sacred city itself. The interior of the structure is unfortunately in a particularly dilapidated condition, but there is a fine inner shrine with a profusion of interesting offerings and ornaments, and a gorgeous gilt ceiling.

Such are the "monuments" of Jehol. Old without being venerable, all of them in neglect, many of them in ruin, they somehow retain a magnificence which appeals to the imagination, and charm the stranger for their very decay. Truly, this is a strange land, with many things in it that are strange—especially to us Anglo-Saxons; but the traveller who has once been to China, even if the merest globe-trotter, will return again with a fresher, livelier interest and more fascination at each succeeding visit.

ARCHIBALD CARY COOLIDGE.

Correspondence.

THE ANGLO-JAPANESE TREATY AGAIN.

TO THE EDITOR OF THE NATION:

SIR: May I, please, make a few remarks concerning the new Anglo-Japanese treaty? The first treaty was concluded and faithfully observed by both parties, because it served their mutual interests. Japan was anxious to be secured, in her attack upon Russia, against the intervention of European Powers. England, on the other hand, was, after her South African experience, more than eager to gain an ally in a possible conflict with Russia; or, rather, England desired to have Japan attack and cripple Russia before the latter Power could think of attacking England in India.

The question arises: Has England's policy been successful? It seems that it has not. The English appear to be more uneasy than ever about their position in India, as is evident, for instance, from recent papers like that on "National Defence" in the *Edinburgh Review* of last October. Their misgivings are not without foundation. In the first place, Russia knows well enough whom she has to thank for her war with the Japanese. The morale of the Russian army has not suffered to any extent. Russia is bound to come triumphantly out of the throes of internal disorders which render her weak and helpless for the present. The greater liberties granted to her people cannot fail to make the Russians stronger, more capable of developing the as yet hardly-touched rich natural resources of their vast dominions, and, last but not least, more patriotic. The want and need of a suitable seaport as an outlet for their Asiatic possessions remains unchanged and unsatisfied. Having found resistance too strong in the Far East, why should they not try whether resistance is not less in a southern direction? Why should they not undertake to restore their weakened prestige by avenging themselves upon an adversary whose land forces have always proved to be a "quantité négligeable," and whose ships can neither fight on land nor pour reinforcements into India as quickly as the two Russian strategical railroads can?

But has not England concluded for that very reason a new ten-year treaty with Japan? That is indeed true. Japan has bound herself to assist England in maintaining general peace in the regions of Eastern Asia and India. She has even promised to come to the assistance of her ally, if the latter is threatened "by reason of unprovoked attack or aggressive action, *wherever* arising, on the part of any other Power or Powers." Between a promise made and a promise kept, there is, however, a vast deal of difference. Will Japan be able, and, if able, will Japan be willing, to come to England's assistance, in case Russia should invade India? Lord Roberts demands an army of 500,000 British soldiers to defend India against a possible Russian attack. England, however, unless it introduces the "conscript system," cannot maintain a European army of much more than 100,000 men in that distant country. The Russians, as has been proved in the Japanese war, may easily hurl over 600,000 men against India, while leaving an army of 500,000 men in Eastern Siberia and Mantchuria; for the Russian army, even on a peace footing, amounts to almost 1,500,000 men, and the distance from Russia to India is only half as great as that from Russia to Mantchuria, while at the same time instead of one there are two railroads at the disposal of the Russian forces.

A Russian army of 500,000, threatening the frontiers of Korea and the other regions held by the Japanese on the mainland of Asia, will undoubtedly prevent the latter from sending any reinforcements to their English allies in India. They will even compel the Japanese to keep peace. Japan is no longer as strong for attacks as she was before the war. By laying her hands upon Korea and a part of Mantchuria, she has given the strongest possible pledges for her future good behavior to the Powers of the world. She must keep out of all foreign entanglements, because in any such complication she is bound to find Russia and Russia's allies siding with her enemy.

England, on her part, is no longer in a position to offer Japan any real help. There is no sea-power, or combination of sea-powers, that does or might threaten Japan, as long as the foreign policy of that country keeps within proper bounds. Under these circumstances, it is extremely improbable that Japan would dare risk the fruits of her late victory over Russia by actually attacking that Power again, even if it should enter upon an aggressive policy against the English possessions in Asia.

There is, moreover, another point to be considered in this connection. Who should bear the expense for the sending of, let us say, 300,000 Japanese soldiers to India, in order to meet a Russian invasion of that country? The present war has left the Japanese without any war indemnity. They certainly cannot pay the war debts incurred in the course of the next ten years. Will they be able and willing to incur a doubling of their war debts by entering upon another war with Russia merely for friendship's sake, because of the blue eyes of Albion? I don't think anybody in England expects that much from the little brown fellows in the Japanese seas. There surely are agreements which are and will be kept secret, promising the necessary cash to Japan in case she has to mobilize her army for England's use. That fact admits of no doubt.

But will history repeat itself? Will proud Japan stoop to do what petty German princes did in our Revolutionary war? Is it not queer that English diplomacy, at the beginning of the twentieth century, can still conceive the idea of defending its possessions across the seas by hiring the soldiers of some foreign potentate? It seems to me that the new Anglo-Japanese treaty is not worth the ink it is signed with. It illustrates nothing but the difficulties which beset statesmen who have to defend territories grown so large that the governing race cannot or will not defend them with its own blood.—Yours truly,

WM. WEBER.

BELLEVILLE, ILL., November 20, 1905.

THE REPORT OF THE COMMITTEE OF FIFTY.

TO THE EDITOR OF THE NATION:

SIR: In the *Atlantic Monthly* for October I saw the announcement of the publication, early in the autumn, of 'A Summary of Investigations conducted by the Committee of Fifty into the Liquor Problem.' I sent at once for the book, in the hope of acquiring thereby some new and effective weapon, derived from American experience, for combating the all but universal use of alcoholic beverages in Germany, where a movement for total abstinence has but just fairly begun, and is struggling against prejudice and long-established habit.

But I was sorely disappointed, especially in the first portion of the book, which treats of the physiological aspect of the drink question. The fact is, that the most important evidence for the harm done by the habitual use of alcoholic beverages is not as much as mentioned. Assuredly the question whether or not, and to what extent, the moderate habitual use of beer is injurious to health, is a question of *statistics*, and we are in possession of such statistics on a grand scale, collected with the utmost care, inasmuch as large amounts of money were involved. I refer to the experience of several great English life-insurance companies, notably the "United Kingdom Temperance and General Provident Institution," which has accumulated experience for more than sixty years, and has kept strictly separate accounts of its Abstinence Division and its Non-Abstinence Division. The mere fact that this company grants to abstainers a *rebate of fifteen per cent.* on their annual premiums, whereas non-abstainers are required to pay in full, is proof abundant of the greater longevity of the abstainers.

This subject, with extensive tables, is treated lucidly in an article by T. T. Whitaker, M. P., in the March number, 1904, of the *Contemporary Review*. From this article I quote a single sentence: "It will be observed that, during the strenuous working years of manhood, from twenty-

five to sixty years of age, the annual mortality rates among abstainers were, on the average, *forty per cent.* lower than among non-abstainers."

Now, I submit that since non-abstainers do not in general die of well-known alcohol-diseases, such as *delirium tremens*, but are taken away by the most various diseases, be it consumption, typhoid fever, or what not, there is no escaping the conclusion that he who habitually indulges in the use of alcoholic beverages thereby greatly weakens his constitution, diminishes his power of resistance to diseases, and shortens his life.

These facts are not surprising when it is remembered that physicians possess only very crude and inefficient means of examining the health of the organs of circulation and digestion, especially the kidneys and the liver; and that, in case of death, say by pulmonary consumption, the physician cannot possibly say whether and to what extent the patient had injured his heart, stomach, liver, kidneys, by the habitual use of alcoholic beverages before the inception of the fatal disease.

Another very important physiological effect is not even hinted at in the report of the Committee of Fifty, namely, the gradual, but grave, dulling effect upon the intellect and the ethical nature of man by the habitual use of beer.

Very respectfully,

WERNER A. STILLE.

HANOVER, GERMANY, November 2, 1905.

"THE SWEET ROMAN HAND."

TO THE EDITOR OF THE NATION:

SIR: My friend Mr. Edward H. Whorf calls my attention to a phrase in "Twelfth Night" which I do not find noted in Dyce's Glossary, O'Connor's Index, Furness's Variorum Edition, the Century Dictionary; in fact, I find it in no usual place of search. The phrase is as follows: "I think we do know the sweet Roman hand" (Act iii., scene 4, line 28). The meaning of "Roman hand" may be so obvious to the learned critics and commentators that they have not thought it worthy of explanation. It is possible, but not likely, however, that it has baffled their knowledge. Be all this as it may, I submit my evidence with due hesitation, for I have never before written a word concerning Shakspere, and probably shall never write another.

In 'The Pens' Excellencie or the Secretaries Delight, Written by Martin Billingsley (Io: Sudbury & George Humble in Popeshead Alley, London, 1618)' occurs this engaging passage:

"The third is *Roman*, which hath his denomination from the place where (it seemes) it was first written, viz: *Rome*. A hand of great account, and of much vse in this Realme, especially in the Vniuersities; and it is conceiued to be the easiest hand that is written with Pen, and to be taught in the shortest time: Therefore it is vsually taught to women, for as much as they (hauing not the patience to take any great paines, besides phantasticall and humorsome) must be taught that which they may instantly learne? otherwise they are vncertaine of their proceedings, because their minds are (vpon light occasion) easily drawne from the first resolution."

Billingsley dedicates his book to King Charles I., then Prince Charles, to whom he was writing-master at the time of the publication of his excellent little treatise. His depreciation of the capacity of women was clearly within his right, for a writing-master as well as a college president may safely stigmatize a whole sex as not being so well equipped as he in his special craft. I find that Miss Jennett Humphreys, in her article on Billingsley in the Dictionary of National Biography (vol. 5, p. 36), has already come upon this passage with evident relish.

The only definition I have found of "Roman hand" states that it is the "Italian hand"—a wholly different style, as the excellent Billingsley points out. I am strengthened in my hopes that the meaning of "Roman hand" is caviare not to the general alone, for Mr. Albert Matthews, to whom I have timorously shown this "find," and who encourages me to send it to you, points out that Schmidt, in his 'Shakespeare-Lexicon,' compares the passage with that one in "Titus Andronicus" (v., 1, 139) which reads as follows:

"And on their skins, as on the bark of trees,
Have with my knife carvèd in Roman letters,
'Let not your sorrow die, though I am dead.' "

Here we have one distinguished commentator who is distinctly wrong, if Billingsley, a contemporary of Shakspere, is right; for Schmidt means only that the letters are Roman, not Italic, and that is not much of an elucidation of either passage. If Schmidt is in the dark, he may perchance have learned company. But if this meaning was common knowledge to the glossary makers and commentators, they surely ought to have imparted it to those for whose benefit glosses are made.

LINDSAY SWIFT.

BOSTON PUBLIC LIBRARY, November 15, 1905.

THE OLD GAME.

TO THE EDITOR OF THE NATION:

SIR: The letter enclosed will perhaps sufficiently speak for itself; but if it really runs as close to impropriety as it strikes me as doing, the promptest of reprobation is due at the hands of some journal not just now interested in a stock of books for sale. In point of fact, university men are coming to receive over-many propositions of this kind, and the best time to balk is possibly when one doesn't much care for the particular set of books in question. Cases of this sort invoke the general principle that the especially needy have especial claim to be delivered from temptation.

Yours respectfully,

H. J. DAVENPORT.

UNIVERSITY OF CHICAGO, November 20, 1905.

HERBERT DAVENPORT, Esq.,
Chicago, Ill.

DEAR SIR:

The *Outlook*, acting in conjunction with The History Association of London, desires to place in your hands a set of The Historians' History of the World, with the view of gaining your endorsement and coöperation in the general sale of the work which will shortly begin.

Our proposition is in the nature of compensation for the time required by you to intelligently examine and pass an opinion on the books.

The enclosed booklet will give you a general idea of the scope and character of the twenty-five volumes. The fact that not since 1779 has there been published an adequate world history, gives an added interest to the present announcement.

If you are in position to consider the offer referred to above we shall be glad, on receipt of the enclosed post card, to send you full particulars, also a description of and illustrations from the work itself.

THE OUTLOOK,
per R. S. T.

NEW YORK, November 18, 1905.

THE INVERSION OF "GRAFT."

TO THE EDITOR OF THE NATION:

SIR: I was interested in your correspondent's quotation from Governor Folk's definition of Graft. Strange as it may seem, this good West of England word means *hard work: work: a job: a livelihood.* It has become ill assorted by base usage. Murray points out that, among men who gain their living on the highway, "the roadster proper is distinguished from the tramp by having a 'Graft,' or, in other terms, a visible means of support!"

Sincerely yours, WM. S. BOOTH.

BOSTON, November 25, 1905.

HIM AND HER.

TO THE EDITOR OF THE NATION:

SIR: In this strenuous town even the little girls play football. Passing a group of them yesterday I was surprised to hear one, as she fell on the ball, exclaim, "I've got him!" Have we not here the solution of that linguistic curiosity, the tendency of the male controller (engineer, sailor, etc.) of an object to allude to the object under control as "her"—an instinctive expression of a fundamental duality? The girl was about twelve years old. Would any boy have called a ball "him?"—Yours,

AN OBSERVER.

NEW HAVEN, CONN., November 22, 1905.

Notes.

Messrs. Putnam have in preparation 'The Connecticut River,' by Edwin M. Bacon, and 'Episcopal Reminiscences,' by Bishop Henry C. Potter.

Mr. William J. Hay, Edinburgh (John Knox's House), whose 'Old Houses in Edinburgh' we have lately noticed, will publish next month 'The Hammermen of Edinburgh and their Altar,' extracts from the records of this incorporated trade, A. D. 1494-1558, with introductory notes by John Smith.

Velhagen & Klasing, of Bielefeld and Leipzig, announce a new, fifth and "Jubilee" edition of Andree's 'Grosser Handatlas,' which is being edited by A. Scobel. It is just twenty-five years ago since the first edition of this excellent work was issued. The number of maps has been increased from 186 sheets in the fourth edition to 207 in the fifth, the new additions being chiefly of countries which have come into prominence in recent years. The size of the page is 16 by 9½ inches. Statistical trade and economic geography especially is made prominent in the new Atlas, which is to appear in 56 *Lieferungen*. The first has just been issued.

It is a far cry (a quarter century) to the first edition of Andrew Lang's 'Oxford,' one of his earliest books, indeed. It is now revived (Philadelphia: J. B. Lippincott Co.) very handsomely in brightly stamped covers, with fifty illustrations, the first in

color. But whereas only three designers were originally called in, now there are nine at least. Happily the later drawings or etchings have been made to correspond with the earlier by MM. Brunet-Debaines, Toussaint, and Thomas; if "process" is not wholly excluded, there is no intrusion of plain photography. In other words, the pictures still harmonize with the text, not as real appearances, but as "impressions." This is proper treatment of a good book.

The "popular edition" of Sir Walter Armstrong's masterly Life of 'Sir Joshua Reynolds' (London: Heinemann; New York: Scribners) is separated from its more sumptuous predecessor by but five years. It is itself elegantly made, and its visible "popularity" (apart from the reduced cost) lies in its having been converted from a folio into a royal octavo. It can, in other words, be now read with at least four times as much ease and convenience, and possession of it will imply that it has been purchased to be read. The public is to be congratulated on having so authoritative a work thus brought within reasonable reach while maintaining a high standard of manufacture.

Within three years Mr. Ernest W. Clement's laudable 'Handbook of Modern Japan' (Chicago: McClurg) has reached a sixth edition, showing that the sale has profited by the great war come and gone during that interval. In proper return, the author has added a chapter on the struggle with Russia, supplying a useful chronology of the leading events, and a summary—of losses, cost, etc.—which will need much overhauling when the respective combatants write their official histories—if they ever do!

Among the noticeable reissues of the week or fortnight are 'The Ingoldsby Legends,' Oxford Edition (H. Frowde), with Barham's portrait and twenty-five illustrations by Leech, Cruikshank, and others—the text somewhat condensed, typographically, but legible enough; still another form, for the hand or pocket, of Stevenson's 'A Child's Garden of Verses' (Boston: Herbert B. Turner & Co.), very tasteful in all its appointments; and a revised edition of Prof. Charles F. Richardson's well-known manual, 'The Choice of Books' (Putnams). Th's author depends much on quotation from others to fill out his chapters. The two related ones on "Remembering What One Reads" and "The Use of Note-books" omit two practical methods—one, to think over what has been read immediately on shutting the book; the other, a particularly useful discipline for the young, to *write down* the impression of every work perused. This edition has been somewhat overhauled. It has helpful suggestions for household libraries.

We receive for the second time the bulky, rather undigested English monograph on 'St. Helena, the Historic Island; from its Discovery to the Present Date,' by E. L. Jackson (New York: Thomas Whittaker). For a book of reference, in spite of its lack of an index, it has its utility, and the photographic illustrations have a curious worth. Some of these were taken shortly after the Boer war, and show the Boers yet interned in the island.

A British business man's views of economic conditions in Japan, Korea, and China, during a journey made three years ago, are entertainingly set forth in the well-illustrated and indexed book, 'Far Eastern Impressions,' by Ernest F. G. Hatch, M. P. (Chicago: A. C. McClurg & Co.). The outbreak of the Russo-Japanese war suggested to Mr. Hatch the idea of making a record of his notes, with revision and additions, which was done some time before the treaty of Portsmouth. The half-tone reproductions from photographs, numbering over four-score, are unusually good, and these, with the excellent maps showing at a glance railway development in the three countries, make this an attractive and timely volume. The illustrations seem about as valuable as the text, for little of purely original matter of any great importance enters into the book, which is rather too rich in quotations. Mr. Hatch crossed the Pacific Ocean to Japan with Kang Yu Wei, the radical Chinese reformer, and then had interviews with such opposite characters as Li Hung Chang and Sir Robert Hart. The author calls attention to the resources of the Shansi coal field, which has an area of 13,470 English square miles, with a probable minimum quantity for the whole area of 630,000,000,000 tons of coal. This is anthracite, with a thickness of 12 metres and a specific weight of 1.5, and is calculated to cover the coal consumption of the world at its present rate (300,000,000 tons annually) for a period of 2,100 years. Besides the deposits of coal and iron, the cheapness and abundance of labor in the mining region have enabled practical iron manufacturers to demonstrate that a ton of pig iron could be produced in Shansi at three dollars a ton. Other titbits of economic information are scattered throughout this interesting book.

'China's Intercourse with Korea from the XVth Century to 1895,' by William Woodville Rockhill (London: Luzac & Co.), though but a pamphlet of sixty pages, is as a nugget of purest metal in the heap of ore of gold, fool's and otherwise, which interest in Korea has made visible in the market. This scholarly writer, in treating of the political status of the peninsular kingdom, shows why and how men of Occidental mind, looking only at forms of European diplomacy, have been so befuddled; for the term in Chinese and Korean official documents usually translated "vassal kingdoms," or "fiefs," really means relationship, which furnishes at once the key to the problem. The Ming emperors of China were "fathers to Korea," and the Mantchu emperors of the reigning dynasty have been "elder brothers"; the present Chinese Emperor, in an edict of 1882, referring to the Korean royal family as his "near kindred." "Tribute," brought to Peking by such so-called vassal states, was really at the expense of China, and was solely a *quid pro quo* for the privilege of trading with the Chinese under extraordinarily favorable conditions; the merchants and merchandise being brought to the market and returned home free of all charges. The chapter on the Mantchu Invasions of Korea is very full and rich in detail, as the author has availed himself of the fruits of recent research by American and other scholars in Korea. An additional chapter on certain laws and customs of the land is interesting. A fondness for alcohol and tobacco is a national weakness, and sauntering a fixed habit; the *kukyeng* (picnic) being part and parcel of the life of the inhabitants. Apart from Japanese political interference, the real Korean problem seems to be how 6,000,000 able-bodied males can, during daylight hours, support in their mouths a tobacco pipe from three to five feet long while doing work enough to get food and clothes. After this, the next question before a possible progressive Korea is the elimination of the mob of female sorcerers that have so long existed as blood-sucking parasites on the body economic and social, while fully equal in their power of wastefulness to the predatory nobility that lives at the expense of the common people.

As correct information about the details of Japan's policy in Korea will be of continuous and increasing interest, it is well to note that in addition to the monthly magazine, the *Korea Review*, which is perhaps not anti-Japanese, while yet severely critical of Japanese methods, the Seul *Press* is issued daily, with a weekly edition. This paper contains news of happenings in the country itself as well as in lands adjoining, with comment and correspondence, all indicating general approval of Japanese policy, with explanation and defence of methods. Perhaps the Koreans, who, for the most part, at present are utterly indifferent to the world at large, may, like the Japanese, profit by the steady streams of criticism which play upon them from both periodicals.

Part 2 of Prof. Angelo De Gubernatis's 'Dictionnaire International des Écrivains du Monde Latin' carries the work from Carretto to Evelyn. One notices the same sprinkling of non-Italian scholars and writers who have come in touch, in one way or another, with the "Latin World." Several Italians of international reputation turn up for treatment—notably, Gabriele D'Annunzio, of whom it is candidly said: "If, as he possesses an exceptional talent, he had had any conscience whatsoever, his literary work would have been beneficent; . . . one admires his natural gifts, but all his motions of a fallen angel disgust us much oftener than they attract. . . . For the moment, one regards him as a phenomenon which terrifies." Of Edmondo De Amicis, on the other hand, only good is spoken. He is placed next to Manzoni and D'Azeglio, as the writer who has handled Italian prose with most ease and geniality; he is said to excel all others in descriptive talent, in sentiment and in revealing pity for the great and small miseries to which mankind is heir. The Dictionary justifies expectations. In future editions it will be possible to give a larger representation to foreigners. The work is published by the author at Rome.

The *Beilage* of the Munich *Allgemeine Zeitung*, the oldest and most influential general scientific journal in Germany, contains in its No. 233 a vigorous editorial from the pen of Dr. Oskar Bulle, entitled "Kongresse und Ueberproduction," in which the writer rather sharply criticises the endless number of congresses, conventions, and other meetings that nowadays seem to be regarded as indispensable for every phase of research or public life. It is pointed out, among other things, that, as commonly conducted, these conventions do not ensure a thorough discussion of the subjects concerned, but that a large proportion of their deliberations is practically "playing to the galleries." The writer declares that the best interests of modern progress demand that the number of such assemblies be materially curtailed, and limited to lines of

work in which public discussion rather than private research is profitable; and, further, that when conventions are actually held, the committees of arrangements should make it their chief business to cut down the programme to what is absolutely necessary or really beneficial. Dr. Bulle thinks that, as at present conducted, the average congress is "too much of a good thing," and that the best interests of science and of the public problems of the day require a thoroughgoing reform in these popular but generally superficial meetings.

The Government of Egypt has agreed that the international Archæological Congress, which convened this year in Athens, shall hold its next convention in Cairo in 1907. The Khedive has consented to appoint a local committee of arrangements; the Athenian committee, however, to retain the general management. It is also announced that the Transactions of the convention held in Athens are to appear within the next few weeks, and are to be sold through the trade at an exceptionally low price.

The surplus of physicians over and above the demand is so great in France that strange consequences have resulted. A correspondent of the London *Lancet* reports that the medical men of the town of Cholet, in Anjou, have united in signing a document which has appeared in the leading medical journals of France, warning all outside physicians against settling in Cholet. A charitable association in another town has decided that the members of their medical staff may receive only 45 centimes for office consultation and 70 centimes for visiting a patient, even if this happens to be a night call or includes a minor operation. The staff has struck, and refused to render its services for such trifles.

The report of the Commission of Inquiry into the Administration of the Congo State, consisting of the Advocate-General of the Brussels Court of Appeals, the President of the Court of Appeals at Boma, and a Swiss jurist added for the purpose of introducing a non-Belgian element, has been published, and from a summary in the London *Times* it would appear to substantiate the charge of grievous cruelties and abuses. There has been a great delegation of power to persons utterly unfit to exercise it, and an almost complete absence of the supervision by which such persons should have been controlled. The report condemns the theory that all untilled land belongs to the State, which has been made the warrant for forbidding the native to change his residence or pass over this land without a special permit. The question of freedom of trade is not discussed, as being outside the competence of the commission, which yet acknowledges that there is virtually no trade among the natives, and native industry is non-existent. In regard to forced labor, the statement is made that "it is on this basis alone that the Congo can enter into the pathway of modern civilization, and that the population can be reclaimed from its natural state of barbarism"; but the principle should be applied in an equitable and paternal manner, and the enforcements limited to the strict necessities of the State. This is not the case in regions exploited by the commercial societies, more particularly in that controlled by the Abir Company, where the imprisonment of women as hostages, flogging to excess, and various acts of cruelty are not contested. In one village there were in recent years, on native testimony, 120 murders. The commissioners recommend that the right to use force in the collection of the labor tax should be taken away from the companies and vested in the supreme authority.

We note the formation of a Pennsylvania History Club, consisting at present of about forty members, and restricted to historical writers of consequence upon themes Pennsylvanian. It is an openly avowed adjunct to the Historical Society of Pennsylvania, and will hold its meetings in that society's building. We cite a few of the leading names: John B. McMaster, Isaac Sharpless, Sydney George Fisher, Samuel W. Pennypacker, Joseph G. Rosengarten, William B. Rawle, John W. Jordan, Burton N. Konkle, Ellis P. Oberholtzer.

—In his 'Washington and the West' (The Century Co.), Mr. A. B. Hulbert prints the diary of Washington's journey to his lands on the Ohio, in 1784, and accompanies it with a running commentary based upon personal visits to the localities and research among historical records. The result is an interesting and valuable book, somewhat too strongly colored by certain prejudices which affected the editor from the beginning of his task. Washington can hardly be held up as an "expansionist" in the modern sense of the word, and no one would have sooner shrunk from such a piece of folly as the Philippine purchase. He was content with the responsibilities entailed by the territory defined by the treaty of 1783, and he looked upon the Mississippi as the true western boundary of the United States. His interest lay in developing the Western territory in such a way as to give it commercial connection with the East. This he desired as a national policy, and incidentally because it would make his large holdings of lands in the Ohio basin profitable to himself. The journey was primarily to view those lands and settle disputes with settlers who had refused to recognize his title. Secondarily, he wished to see the possibilities of connecting the Virginia rivers with the Ohio, so as to tap the growing commerce of the West, and enable Virginia to compete successfully with Pennsylvania and New York.

—The diary was printed by Sparks, but not in full, and Mr. Hulbert claims to give an exact reproduction of its text. Unfortunately, his copyist has played him some tricks, and especially in the spelling of proper names. Washington's writing is very clear after a few twists have been mastered, and it showed carelessness to print *Casson* more than once for *Cannon*, or *Snearenger* for *Swearengen*, or *Hd'sten* for *Holston*, or *hewis* for *Lewis*, especially as the editor gives the correct spelling in his commentary. Nor was it *Trickett* (p. 28) but *Snickers* of whom Washington wrote. A glance at the manuscript would have prevented such errors, as in each case the words are clearly and correctly written. Nor is the editor himself careful in his references. He writes *Luzerene* for *Luzerne*, and places the Braddock march in 1775. His notes are full to diffuseness, but he has made a very readable book, and the diary deserved to be printed in such an admirable form. Mr. Hulbert could have found additional information as to Washington's land ventures and his interest in the navigation of Virginia rivers. This interest was awakened and fostered by his half-brother Laurence, and the summary of the results of this journey of 1784 make an essential chapter in the history of the internal commerce of the Middle and Southern States. That the expectations of Washington were never realized takes away nothing from his excellent judgments upon the situation in his day and what the interests of Virginia demanded.

—Miss Anna B. McMahan has carried out satisfactorily her excellent plan of collecting from Shelley's diaries, letters and printed works all local references to his stay in Italy. This material, to which she gives the title 'With Shelley in Italy,' (Chicago: McClurg), has a two-fold interest, for it appeals to the lovers of Shelley and to the lovers of Italy. With the evidence thus concentrated, the student of Shelley's genius can realize, what he may have only dimly felt, that Italy, whither Shelley went in April, 1818, was a vital inspiration for him. The poems which he wrote from that date till his death in July, 1822, so obviously transcend all his previous work that we hardly exaggerate in saying that they are the real Shelley, that the earlier work hardly counts, and that but for Italy he might never have developed. In Italy, he found the spiritual climate indispensable to his genius, and he throve and blossomed and bore fruit in prodigal luxuriance. There he found also the material conditions without which he had been irritated and checked. There, too, was the landscape which, etherealized in his imagination, made the scenery of his masterpieces. There was the land

"Where music and moonlight and feeling are one."

Miss McMahan has followed him from place to place, and, besides quoting his descriptions and poems, she supplies admirable summaries of his life year by year. She illustrates her book with three score or more views of buildings and scenes mentioned by Shelley, and of his various dwellings. The whole forms a delightful sort of poetic itinerary, whether for persons who are actually in Italy, or for those who travel in imagination only.

—The charm of French rural and provincial life, closed to the casual tourist, Mme. Mary Duclaux (A. Mary F. Robinson) once again brings before us in the republication (London: Chapman & Hall; Philadelphia: Lippincott) of 'The Fields of France,' a beautiful quarto with twenty reproductions of water-color sketches by W. B. Macdougall, chiefly in illustration of French dwellings from farm-houses to châteaux. These pictures, done in light tints and with great suggestive deftness in simple handling, are wonderfully accurate in conveying the feeling of French landscape, except that in the Loire country sketches we miss something of the subduing grays and glowing yellows of that lovely region. Of the writer's part, a reviewer fortunate enough to have enjoyed informal French hospitality, to have chatted with farmer or peasant in field and vineyard, can but speak in terms of eager pleasure. The seven divisions of her book carry one from Normandy to Provence with apparently equal sympathy and shrewd observation, in the same spirit as Miss Betham-Edwards's kindred work dealt with

other aspects of French social life. What a contrast with corresponding books of a few generations ago! We would draw special attention to the first study, "A Farm in the Cantal," which covers the annual rural pursuits of a modest establishment—Mme. Duclaux's own—in the mountains of Auvergne; also, to the admirable exposition, "The French Peasant," in which the author traces the vicissitudes of the rural population in general through the developing changes of legislation, old or new. Her contention is that the peasant is relatively worse off to-day than in the Middle Ages. The account of a country day at "A Manor in Touraine" is absolutely exact (p. 72), and could be matched in any department of France, save the very poorest. Altogether, this is a delightful book.

—Through an excellent and inexpensive reprint (Lane) the 'Memoirs of Lady Fanshawe' are once more rendered accessible. This work, which holds a high place in the biographical literature of the Stuart era, is specially serviceable as helping to correct a vulgar error. Because the Cavaliers of the pre-Regicide period were gay and to a certain extent dissipated, it is still thought by many that the strife between them and the Roundheads was a contest between irreligion and religion. Such an idea, as a sweeping generalization, is ill-grounded. Nowadays few people read Sir Robert Filmer's 'Patriarcha,' but the arguments there advanced in support of absolute monarchy are strictly Biblical, and the serious-minded cavalier who fell at Edgehill deemed that he was giving up his life no less for the faith than for the crown. Lady Fanshawe in her youth was a very sprightly person who, before her marriage, was among the gayest of the gay when the King kept court at Oxford. Yet even then her mirth was not of the kind which brings repentance, while, under the influence of her husband, she gained dignity and seriousness without losing her original verve. The most famous passage in the 'Memoirs,' the account of her parting with the King, is instinct with that kind of piety which was as native to the Cavaliers as the watchwords of Puritanism were to the Roundheads. "He stroked me on the cheek and said, 'Child, if God pleaseth, it shall be so, but both you and I must submit to God's will, and you know in what hands I am.' . . . Thus did we part from that glorious sun, that within a few months after was murdered, to the grief of all Christians that were not forsaken by God." The hero of these 'Memoirs,' however, is not Charles I., but the writer's husband, Sir Richard Fanshawe. Composed for the edification of her son, Lady Fanshawe's pages recite, though with tact and good taste, the virtues of his father. Fanshawe, who was an excellent scholar and a thoroughly honorable man, returned to England at the Restoration in the King's immediate train, and was soon rewarded with the post of ambassador at Madrid. Toward his memory his wife is able to maintain an attitude of true devotion without falling into what has been styled the "door-mat" posture of adoration. The standard of comparison which one naturally thinks of in this case is set by Mrs. Hutchinson's volume on the virtues of her husband; but, as Beatrice Marshall points out in an introduction to this reprint, "the Royalist Ambassador's wife is incomparably more sparkling and anecdotic than the Puritan Colonel's." Speaking broadly and with reference to sheer historical value, Mrs. Hutchinson must, we think, be placed before Lady Fanshawe; but, considered intrinsically, the present volume is a record of very considerable value.

—Dr. George Bryce's 'Mackenzie, Selkirk, Simpson,' in the "Makers of Canada" series (Toronto: Morang), is occupied with the commercial rivalry which made the Northwest of Canada a battleground between two great companies. The volume includes, it is true, an account of Mackenzie's travels and the subsequent explorations of Simpson, but the main motive is furnished by that bitter struggle for trade between the Hudson Bay Company and the Montreal merchants who ventured to enter the field against them, under the name of the Northwest Company. Lord Selkirk's experiments in colonization were affected by this rivalry no less than the routine traffic in beaver skins, and though his attempts to establish a Scottish settlement in the valley of the Red River is a self-contained episode, it fits in well with Dr. Bryce's narrative of the great commercial war. Selkirk, for example, antagonized the members of the Northwest Company, was assailed by them in lawsuits and sentenced at their instance to pay considerable damages. Few incidents in the history of modern philanthropy are more tragic than the efforts of this Scottish peer to relieve distress by enabling the more wretched of his countrymen to make homes for themselves upon the virgin soil of the prairie. One important paper, as yet unpublished, Dr. Bryce has procured in the memorial that Selkirk addressed in 1802 to Lord Pelham, then Home Secretary. That is to say, nearly ten years before his first emigration project was matured, he had made up his mind regarding the objective point. "At the western extremity of Canada, upon the waters which fall into Lake Winnipeg, and, uniting with the great river of Port Nelson, discharge themselves into Hudson Bay, is a country which the Indian traders represent as fertile, and of a climate far more temperate than the shores of the Atlantic under the same parallel, and not more severe than that of Germany and Poland. Here, therefore, the colonists may, with a moderate exertion of industry, be certain of a comfortable subsistence, and they may also raise some valuable objects of exportation." This passage contains, perhaps, the earliest forecast of agricultural resources in Western Canada to be exploited on a large scale for the indigent classes of Great Britain. Dr. Bryce, who is one of the first authorities on the annals of the Canadian Northwest, gives us here an interesting sketch of Mackenzie and Simpson, but his account of Selkirk is, we think, the most striking thing in the present volume.

THE HOUSE OF MIRTH, AND OTHER NOVELS.

The House of Mirth. By Edith Wharton. Charles Scribner's Sons.

Jules of the Great Heart. By Lawrence Mott. The Century Co.

The Deep Sea's Toll. By James B. Connolly. Charles Scribner's Sons.

The Professor's Legacy. By Mrs. Alfred Sidgwick. Henry Holt & Co.

The Toll of the Bush. By William Satchell. Macmillan.

The Mountain of Fears. By Henry Rowland. A. S. Barnes & Co.

At least two serious and authoritative writers have expressed a view of Mirth in memorable words. The Preacher, whose wisdom is enshrined in the Book of Ecclesiastes, was a man of moods; in a dreary moment he turned a gloomy eye on Mirth, and described her house as the house of fools. Milton, a less impetuous poet than the Preacher, and, we are inclined to think, a man of greater discernment, of more sedate habits, gazed genially at Mirth, hailing her as a "Goddess fair and free," begging her to "admit him of her crew." In great literature, therefore, the character of Mirth and of the habitués of her house remains undetermined, and (for most of us) to consider any subject that has been inconclusively discussed in great literature is to dwell forever in the shadow of doubt. Mrs. Wharton, who is a serious writer and is already hailed in some quarters as an authoritative one, appears to have escaped the blight of indecision. Perhaps, while meditating Mirth, she overlooked Milton, and could therefore the more easily, with a clear conscience and earnest conviction, range herself beside the Preacher. At all events she has written a long book in support of his dictum, a tale of American society, which assures us that the Preacher was a prophet, and that a bitter epigram may incorporate literal truth.

In order to do justice to Mrs. Wharton's book, a disposition to challenge her attitude towards her subject should be repressed. Having made up her mind, she seldom wavers or falters. Her weak moments are few. She is "thorough." The main prop of her argument is perspicaciously chosen. A woman, young, beautiful, and poor, whose only object in life is to make a great match (as American slang appropriately has it, "to marry rich"), is a pillar of strength for the purpose of delineating a society that has neither mind, morals, nor manners—a destitute society rolling in money. Many novelists have described the social career of this ill-fated young person, generally representing her as a victim of circumstance, herself possessing intrinsic virtues which either conquer superficial and accidental attributes or at least make a good enough showing to engage the reader's sympathy. Not in this lenient fashion has Mrs. Wharton seen and judged Miss Lily Bart. The image most consistently and consistently before her, most vividly presented, is not that of a naturally good girl, of an essentially nice girl, hurt, hardened, degraded by contact with a wicked world, but that of a girl born at the wicked world's level, who, failing to get a firm footing therein, is driven by bitter and repeated disappointment to take her leave by the agency of an over-dose of choral. Miss Bart never willingly faces life beyond the precincts of the House of Mirth, but outstays her welcome there, resorting to ignominious shifts, pocketing rather deadly insults, until she is pushed out of doors and down, step by step, to the common highway.

Occasionally Mrs. Wharton's clear, severe vision wavers. She intimates that her Lily

Bart is superior to her world, that she chafes in chains, and has intermittent attacks of soft and even sanctifying emotions. Mrs. Wharton is weakest when she is merciful. Miss Bart does seem to throw up her game at a critical moment and to let coveted prizes slip through her fingers; but such misfortunes strike us as unforeseen results of her folly or of an unexpected checkmate. There is no evidence of instinctive recoil from an intention recognized as ignoble. Even her final rejection of the monstrous conditions on fulfilment of which Mr. Rosedale has expressed a willingness to marry her, fails to establish any moral worth.

Blackmail is a resort of the infamous. A decent girl, one not necessarily clever or kind or well-bred, would have sent Mrs. Dorset's compromising letters back to her as soon as they fell into her hands. It is by the temptations that Miss Bart permitted to visit her that her character finally fails to commend itself for sympathetic judgment or compassion. "Dingy" is her favorite appellation for those who do not live in splendor on their own or other people's incomes. She had a mortal horror of dinginess, external dinginess, but lived and moved delightedly among souls of a dinginess incomparable, beyond furbishing. The poor girl's inward eye was a feeble organ not susceptible of cultivation.

A hasty mental comparison between Miss Bart and famous heroines of society fiction, both English and French, suggests many points of resemblance, though in one respect she stands alone in dreary isolation. She has not a particle of genuine, fundamental, good human feeling, and has very little bad. Her assumed tender emotion for the cautious, not to say canny, Mr. Selden (a cold prig), never convinces any one, not even him. She cherishes no affectionate sentiments towards the mother who did her poor best for her, the aunt who supported her, the rich women who dressed her, or the poor friend who adored her. In no society could such a being exist except in that where the dismal and (to the reader) often tedious drama of her life goes on. The denizens of her 'House of Mirth' are revolting. They eat and drink, expensively and often, but are never merry. They never think, and their talk is as the crackling of thorns. They break the seventh commandment without the excuse of passion, apparently playing with adultery and divorce (as they seem to play bridge for high stakes and drive motor-cars) in order to assert privilege, to earn the absurd epithet, "smart." They have no ideas, no intellectual interests, neither wit nor humor nor tact nor grace.

If this is American society, the American House of Mirth, it is utterly unsuitable for conversion into literature. Literature demands all that such society has not—ideas, intellectual interests, sentiment, passion, humor, wit, tact, and grace; it can get along perfectly well without money, which is the only desire or possession of such society, its only claim for recognition even by the newspapers. A feeling for fair play obliges us to protest Mrs. Wharton's picture as a prejudiced one, yet it is not consciously unveracious. Though depressing, it is not wholly unprofitable. A perusal of Miss Bart's melancholy history will hardly incite those who are in society to pause and examine themselves, but it may cause those who are outside the ring to praise God for that he has been pleased to make them "dingy."

'Jules of the Great Heart' is a story of the life of trappers in the Hudson Bay region in early days. The hero is a "free" trapper—a poacher, that is to say, on the recognized hunting-ground of the Hudson Bay Company. He set few traps of his own and lived by stealing from the traps of the Company. This was, of course, enough to make him an outlaw with a price on his head, but Jules throve and easily outwitted the Indian trappers of the Company. What proved the greatness of his heart was the fact that he was always ready to help a man in distress, and he gradually won over the friendship of nearly all the trappers who had vowed to take his head back to the trading-post. The sentimental character of certain of the episodes would make Jules a suitable figure in Sunday-school literature if it were not for his irreconcilable enmity with the Indian Tritou, whom he kills in a manner that leaves no doubt of the savage disposition beneath. The book offers interesting reading for boys, and even older readers may enjoy the vivid descriptions of the hard life of the trapper in those wildernesses of snow where the bodies of the trapped furry animals are quickly frozen stiff, and a man's life often depends on his skill in making himself the right kind of snow shelter for the night.

Since Mr. Kipling's 'Captains Courageous,' the New England fishing fleets have been promoted to a high place in the fiction of seafaring. This is no more than their due in these days when the field of the romance of sailing-ships is necessarily limited, and the novelist is driven to make the engine-room the centre of interest in typhoons. The storm-swept deck of a trawler off Georges Shoals on a bad night, or the north-east bar of Sable Island, the Graveyard of the Atlantic, will furnish all the old sensations, and there are few adventures more perilous than being lost in a dory in a snowstorm, a hundred miles from the coast. Mr. Connolly, in 'The Deep Sea's Toll,' continues the series of stories of deep-sea fishing begun in 'Out of Gloucester.' They are admirably drawn pictures of the hardest life a man can choose. The constant facing of death as part of the day's work begets characters of the most simplified type, and, whatever may be the reaction on shore, there is no such school of heroism and unselfishness as the Atlantic trawler. It is to be hoped that some English writer of short stories will be inspired by Mr. Connolly's success to describe the no less interesting existence of the English North Sea fishermen, where the conditions are, however, somewhat different; the absences from home on the Dogger are longer, and, since the fish are collected from the trawlers by a steamer, and the fleet is less scattered, there is more coöperation and, in the absence of Russian battleships, less danger.

In 'The Professor's Legacy,' Mrs. Sidgwick has revived a situation that had a great vogue in the eighties. In England it was the theme of 'Agatha's Husband,' a novel which, in the familiar old yellow cover of those days, thrilled every English reader of sentimental fiction. The German version of a similar plot was 'The Second Wife,' and perhaps the most successful variation of all was Ohnet's 'Ironmaster.' The young wife, who confides to her husband, within a few hours of their wedding, that she loves another, or that she is, at any rate, indifferent to himself, regularly, in this type of fiction, fares better than she deserves. Her statement is always received with becoming dignity, and a week has seldom elapsed before she finds that her husband is the real hero of her dreams. After this there is very slight variation in the course of the plot. The repentant wife is treated with the greatest consideration in all externals by her husband, whose complete skepticism as to the state of her affections the lady novelist depicts as almost brutal. His coldness naturally precipitates the crisis, the wife's declaration. It is at last discovered that, under that exterior of icy politeness, is disguised an ardor that matches her own. We have observed that the bridegroom in the early stages is never so thoroughly disillusioned by his bride's declaration of independence as to be permanently cured of his own passion. Yet that state of things would lead to a far more complicated and interesting and perhaps more probable situation. The scene of Mrs. Sidgwick's novel is partly Germany, where her heroine is brought up, partly the north of England, where her husband brings her to live. The scenes of English life are well done, and the tale as a whole is quite as entertaining as any one of the earlier romances of the same type.

William Satchell's 'The Toll of the Bush' is a New Zealand story full of life and swing. The title is derived from the native superstition thus stated in chapter x.: "Every bushman knows the toll of blood demanded by the virgin forest. It is fixed and inexorable." This is an appropriate term for the tragic if slightly theatrical denouements whereby the treacherous bridegroom breaks his neck on his wedding day. There are two courses of true love pursued by the two brothers Hernshaw, and the smoothness of both is obstructed. Robert, the younger one, has only to overcome his bride's scruples at the idea of saddling him with her drunken father and a mother who has thrown moral conventions to the winds. In the end the mother is perfectly happy in her unlawful home, and the drunken father dies saving his own children from a fire he has himself kindled. In contrast to this rather startling picture of poetic justice, Robert and his young wife are the best drawn characters in the book. We ought, perhaps, to except the delightful "Bush Oracle," a woodman's wife, whose maxims are so shrewd and quaint that we forget their often unnaturally fine English. The other love story, of Geoffrey Hernshaw and Eve Milward, has too many of the customary complications to be altogether convincing. There is the successful rival, criminally unscrupulous for all his holy orders; there is the unfounded suspicion which Geoffrey is too proud to refute and Eve too jealous to ignore; finally, there is the exonerating letter discovered too late, and the revulsion of feeling which drives the newly married bride out into the Bush, to be found and sheltered by her true lover. Yet even these incidents are so well told as to keep us in pleasing uncertainty to the very end, and there is about the whole book a freshness and a flavor of the wilds that gives it a most welcome individuality.

In 'The Mountain of Fears' we have some of the most unpleasant short stories it was ever the fate of an author to invent. As they deal with strange and exotic regions such as Papua, the Orinoco, Borneo, Curaçao, Sulu, the South Sea Islands, Hayti, and the Malay peninsula, the ordinary reader cannot be a judge of their verisimilitude; but, if the writer is to be trusted, man in those spots "where every prospect pleases" must be "vile" indeed. Drinking, murder, abduction, fraud, brutality, cowardice—such are the contents of the book. There is no denying that, in spite of some exaggeration and tall talk, the stories are exceedingly well told, but why tell them? Or, to quote the query of the hero, Dr. Leyden, whose adventures as a collector form the connecting thread of the volume, why must the writer rake the lockers of his recollection for the morbid and anomalous? There is, however, just one story, "Rosenthal, the Jew," which shines out as a bright spot; its characters are not wholly detestable, it has humor and real pathos, and arouses our breathless interest. Perhaps in his next volume Mr. Rowland may employ his undeniable gifts on something more of the same kind.

PICTURE BOOKS.

The two latest issues of the Newnes Art Library (Scribners) are devoted to Filippino Lippi and to the early work of Titian. They have the value of other volumes of the series in giving a larger number of reproductions of the works of the artists dealt with than are readily to be found elsewhere, and the quality of the reproductions is improving; but they are much less useful than they might be made if the works were ranged as nearly as possible in chronological order, or if all ascertainable facts as to date and place of execution were given in a note to each picture. The text of the volume on Filippino, by P. G. Konody, is a more serious performance than most of the contributors to this series have offered us.

The same publishers add to their series of books of "Drawings of the Masters" a volume of the drawings of J. M. Swan, one of the most vigorous of British artists and one of the best painters of animals anywhere. Not but what Mr. Swan paints the figure also, but the few figure studies here given, while far better than those of Mr. Poynter lately published in the same series, are scarcely first-rate. It is in his studies of animals, particularly of the great cats, that the artist is quite at the head of living practitioners, and has scarcely been surpassed even by Barye. The quality of the reproductions is quite wonderful, giving the very look of the materials employed, even to the shine of black lead pencil, as well as more important things; and, in the absence of the originals, the possession of this volume will be a delight to the real art-lover.

The importers of this volume are the publishers of a book of drawings by a master of a very different kind—a master whose drawings, hitherto, have been an end in themselves, not a means to the production of other works of art. We are informed that Mr. Gibson's tenth book, 'Our Neighbors,' is to be his last; and while it is impossible not to sympathize with the ambition of the brilliant illustrator to become a painter, we feel that the immediate result of that ambition must be our loss, whatever may be the ultimate gain. A much wider public than the American will miss what has heretofore been the greatest attraction of more than one of our foremost periodicals. He leaves us quite at his best, and his humor has never been keener or his technical ability more astonishing than in the present collection.

It is perhaps unjust to Mr. E. V. Lucas to rank his book, 'A Wanderer in Holland' (Macmillan), among the picture books, for the text has an interest of its own; its pleasant mingling of personal narrative with compilation from various sources providing considerable mild entertainment. Still, it is doubtful if the twenty illustrations in color by Herbert Marshall and the thirty-four reproductions from paintings by the Dutch masters must not be considered the real *raison d'être* of the publication. Mr. Marshall's drawings, if in no wise great, are yet distinctly clever, and succeed in conveying some idea of the picturesqueness and the abiding charm of Holland; while the Dutch masters, though the examples selected are not always of the first importance, are always welcome. Mr. Lucas makes no pretension to connoisseurship, but his untechnical remarks on pictures are nearly always interesting, and, to one reader at least, prove the most attractive part of his writing.

No apology is necessary for rating Gustave Geffroy's 'The National Gallery' (Frederick Warne & Co.) as a picture book, for one cannot imagine the text, not incompetent but quite perfunctory, existing without the illustrations. The National Gallery, which Sir Walter Armstrong calls, in his introduction, "on the whole the completest collection of pictures in the world," is so rich in masterpieces that the book, with any text or none, would be supremely welcome if only the plates were well executed. Unfortunately, many of the photogravures are but mediocre, and most of the process cuts are wretched, so that what should have been a feast of art is little more than an aid to memory. It is a pity that a fine scheme should have been so mangled in the execution, a fine opportunity so misused.

Miss Singleton's 'Great Portraits as Seen and Described by Great Writers' (Dodd, Mead & Co.) hardly answers to the title. Some of the portraits figured are great, some are good, and some are neither the one nor the other; while such authors as Crowe and Cavalcaselle, Carl Justi, Woltmann, and others, whatever their value as critics or historians of art, have slight claim to be called great writers. On the whole, the compilation has little to recommend it, and some of its faults are inexcusable; the worst of these being the appearance of entirely different works under the titles and appended to the descriptions of Hals's "Maria Voogt" and Raphaels's "Maddalena Doni."

There are very few pictures in the last of our picture-books, but then there is so little of anything else! Under the title of 'Womanhood in Art' (San Francisco: Paul Elder & Co.), plates of the Venus of Milo, Dagonet's Eve, Mona Lisa, Beatrice Cenci, the Madonna of the Chair and the Sistine Madonna are printed in a thin volume and tied together by some pages of gushing sentiment by Phebe Estelle Spalding, for the benefit of what public it is difficult to imagine.

CHILDREN'S BOOKS.—II.

In his new book, 'The Champions of the Round Table' (Charles Scribner's Sons), Howard Pyle continues the work begun two years ago in his 'Story of King Arthur and his Knights.' It is evident that this writer brings to his task wide knowledge and great enthusiasm; we could wish that he did not in large measure spoil the good effects of both by diffuseness, affectation of style, and prosy sermonizings. The volume deals with Sir Launcelot and Sir Tristram, whose stories we may, in spite of many interpolations, trace more or less distinctly to books vi., viii., ix., and x., of the 'Morte d'Arthur'; the book of Sir Percival is not drawn from Malory, whether in his book xiv. or elsewhere. The names of the heroes are well known to all, but, as Mr. Pyle practically ignores the Guinevere affair, omits the marriage of Sir Tristram with the second Isoud (La Blanche Mains), and tells us nothing about the Quest of the Sangreal, we find few of the familiar landmarks to help us on a somewhat weary course through 329 pages. The illustrations, even, do not cheer our way, being stiff and black imitations of fifteenth-century woodcuts. It must, however, be remembered that children do not mind long narratives, and do like constant fighting; so for their sakes Mr. Pyle may be congratulated on having produced a *ne plus ultra* in both directions.

Mr. F. Jameson Rowbotham has given us, in his 'Tales from Plutarch' (Thomas Y. Crowell & Co.), a pleasant glimpse into the famous Parallel Lives. It is true that he omits the parallelism, and that his four stories, Theseus, Romulus, Fabius, and Alcibiades, are Nos. 1, 2, 10, and 11, so that the two last appear without their corresponding mates. But it is to be hoped that this pretty little volume is only the prelude to a more comprehensive series. It is, indeed, doubtful whether the illustrations will add to the pleasure of any reader however young, and it is certain that the moralizing, especially obtrusive in the mythological stories, might be omitted to very good purpose. Again, an excision of such inaccurate or peculiar expressions as "who laid in wait," "Straits of Peloponnesus," "lithesome," "valiancy," "you have reason, my son," "Delphes" and "Cannes" for Delphi and Cannæ, would be very advantageous, as also a closer adherence to the text. Thus, Plutarch says that the Athenians sent Minos their living tribute every nine years, but Mr. Rowbotham prefers to make it every year. In the original, Theseus merely protects the new laws, while in this version he retains the power of framing them. In one place the word Tribune is used as a generic term for any magistrate, and in another a farmer of the taxes is confused with an ordinary farmer. Again, the title of the third story, "Hannibal's Schoolmaster," shows an unfortunate misconception of the jest contained in the word Pædagogus as applied to Fabius and his cautious attendance on Hannibal's every movement. Such instances might be multiplied, but it would be an ungracious task. In spite of its defects, this little book is a

welcome addition to the children's library of classics.

'Adventures in Pondland,' by Frank Stevens (McClurg & Co.), is a minute but generally entertaining study of the plant and animal life of a little fresh-water pond or pool. Two children, whom the fairy of the pond made free of her realm under the water, paid frequent visits thither from March till September, and watched the development and interaction of many forms of life—frogs, toads, dragon-flies, newts, water-spiders, May-flies, and a multitude of other creatures—that lived in the cool green forests of water-weeds at the bottom or among the rank tangles on the margin, or skimmed the surface in their gay but brief term of aerial life. The book ought to give young readers new interest in humble orders of life, and some idea of nature's adaptation of means to end.

'The Family on Wheels,' adapted from the French by J. MacDonald Oxley (Crowell & Co.), is an odd and attractive story of four orphan children, who, with a sagacious trick elephant, an intelligent old horse, and a clever poodle, travel from one French village to another in a showman's van, and, before rustic spectators, earn a poor living by the mountebank's trade inherited from their father. The children are modest, brave, and self-reliant through many hardships, and the three animals, which play an important part in the story, are well worth knowing.

The story of a Spanish child, daughter of an impoverished nobleman who cast his lot with Columbus in the first voyage to the New World, comes to us in 'Lady Dear,' by Millicent E. Mann (McClurg & Co.). Little Juanita falls into the hands of a wicked kinsman, who covets the ancient castle where poverty had forced her father to leave her unguarded in his absence. A faithful nurse, a devoted and adroit jester, a secret stairway, and a perilous journey to the court of Isabella, who proves herself generous and just, are features that suggest the outline of the story. The writer has succeeded better than many others who undertake work of this romantic type in making her heroine, if not lifelike, at least conceivable and winning.

'The Menehunes: Their Adventures with the Fisherman and How They Built the Canoe,' by Emily Foster Day (San Francisco: Paul Elder & Co.), introduces us to the tiny wood-people of Hawaiian folk-lore who plant and tend the trees, ferns, and shrubs. "The ancient folk-lore of the islands is full of tales of their wonderful works; and if any one wants more proof—why, there is the great water-course of Kauai, cut through the solid rock—no man knows by whom else." The little book is attractively illustrated by Spencer Wright.

Katherine Chandler has gathered from many sources a collection of interesting little stories from folklore of the Pacific Coast. It is called 'In the Reign of Coyote' (Ginn & Co.), because for many of the tales the coyote is the *deus ex machina*. "How the Animals Secured Fire," "Why the Snakes Change their Skins," "Why the Coyote is so Cunning," are titles that suggest the character of the book. A little Spanish brother and sister and three Indian raconteurs bind the legends together with a pretty thread of story.

'Pleasant Tragedies of Childhood' (Harpers) is a series of twenty-nine delightful full-page drawings, by F. Y. Cory, set to appropriate rhymes by Burges Johnson—a felicitous combination for both young and old. The twelve that delineate trials of a first baby are the best part of the book.

'The Adventures of Tommy Post-Office,' by Gabrielle E. Jackson (McClurg & Co.), tells the story of the pet cat of the Hartford (Conn.) post-office—a real cat, the writer says, that is now flourishing to a green old age among the mailbags, ready to be interviewed,

"To witness if I lie."

The story is a record of moving accidents and hairbreadth 'scapes, but it also has its seasons of serenity and even of romance. It is brightly told, and will interest children, and their elders who like cats.

This is the centennial year, not only of Schiller and Trafalgar and Mazzini and Garrison, but of Hans Christian Andersen; hence a "centenary edition" of the genial Dane's 'The Ugly Duckling' (New York: Moffat, Yard & Co.). It is a small quarto in boards, printed on a sort of buff paper, with the added distinction of illustrations by M. H. Squire, four colored plates and some pen-drawings; the last of these the best. Any child will like this book.

The more decorative and fanciful the pen-drawings of Willard Bonte in Mr. Clifton Johnson's collection of favorite fairy tales, 'The Oak-Tree Fairy Book' (Boston: Little, Brown & Co.), the more successful they are, and generally on the small scale rather than on the large. Such a tail-piece as that at page 33 is a good example. The favorite tales are a rather individual assortment, handsomely printed in clear type.

Even more elegant in this respect is the edition of 'Æsop's Fables' to which Miss Cary furnishes an introduction, for adults (Moffat, Yard & Co.). Here the accompanying designs are by J. M. Condé, both in color and in black and white. All the animals are dressed up, and on the whole we find the spirit of the artist too burlesque, especially for an edition in which the moral is carefully preserved and printed in boldface type.

McLoughlin Bros. send us 'Wee Pieces for Wee Speakers' at home and school entertainments, and a grave fault is that it has no table or index. All the contents is in verse, and is a medley. Coleridge's Christmas Carol has been so docked as to be incoherent.

The Upton sisters pursue their absurd creation with 'The Golliwogg's Fox-Hunt,' in which the antics of the wooden dollies and their attendant blackmore are as amusing as ever, and the verse as smooth (Longmans).

In 'Occupations for Little Fingers' (Scribners), Elizabeth Sage and Anna M. Cooley have given a plain answer to the question of grade teachers, mothers, and settlement workers, What can we give the children to *do*? This little manual illustrates and describes simple forms of handwork; including cord and raffia-work, coarse sewing, paper-cutting and folding, clay modelling, furniture and upholstery for a doll's house, and crocheting and knitting. The writers are teachers, who have worked out with their classes the things of which they write. Their models are simple and useful articles that will interest the child and give his work practical connection with the world about him. They also make valuable suggestions about materials, including a chapter on "How to Use Nature's Materials," and they give with each lesson the necessary cost.

The Confessions of Lord Byron. Compiled by W. A. Lewis Bettany. London: John Murray; New York: Charles Scribner's Sons. 1905.

The above suggestive title may disappoint persons interested in ancient scandals, if any such persons still exist. Mr. Bettany's book is more correctly described in the sub-title as a collection of Byron's "private opinions of men and of matters," and contains few references to incidents and relations of his private life which, in his own day and long after, excited as much public interest and criticism as did his poetry. The compilation of letters and extracts from journals is made from the elaborate Murray edition, only recently completed, an edition that includes over a hundred letters not previously printed. Mr. Bettany has not followed the chronological order of the Murray edition, but has arranged his matter under headings—"Byron's Reflections on Himself," "Religious Views," "Opinions of the Literary Life, of Friends, Contemporary Poets," etc. The advantage of his method lies in the facility offered for reference, but it presents the matter with a formality which detracts somewhat from the energy and spontaneity of opinions and reflections flung out haphazard to the poet's intimate correspondents. It is a very deterring and unsatisfactory method for a reader who wishes to observe the growth of Byron's mind, or to form a substantial estimate of his character from his own careless, casual, voluminous revelations to his sister, his friends, his solicitor, and especially to his long-suffering publisher, John Murray. Mr. Bettany's selections are, however, judicious, and, in spite of frequent detachment from illuminating context, do the writer no injustice.

Byron had a fine, an inexhaustible store of grievances against the world at large, particularly against his own English world; and one most bitterly felt was a popular tendency to identify him with his poetry—that is, to construct out of 'Childe Harold,' 'Cain,' 'Manfred,' 'Don Juan,' a monster, hight Byron, whose existence was a menace to the homes and Constitution of England. Poetry, he frequently protested, is an expression of exalted passion; a man cannot live from hour to hour in a state of exalted passion. Perhaps not; nevertheless, an inference from Byron's letters is that he almost could. They confirm many of the hints of character derivable from the poems, but at the same time demolish the monster of Early Victorian legend. Byron the poet was a supreme incarnation of the Romantic ideals of his period, born to concentrate in immortal verse the great emotions then agitating mankind. Therefore, however vulnerable to criticism in detail, his rank as a great poet, a world poet, is unassailable. The poetry declares a man of strong, disordered passions, of aggressive intellectual independence, vain, extravagant, profligate, witty, insolent, with all good qualities enhanced, and even gross defects transmuted into something fine and inspiring, by the constant presence in him of the will to be free, and

of an irrepressible ardor to goad the slave to rise up and claim his birthright. His letters declare the same man at relaxed tension, dropped to the prose level. He seldom treats his correspondents to imagery or verbal decoration, but quotes classical and English literature very freely, not always correctly. Mr. Bettany has been enough interested in his author's easy command of literary allusion to count the quotations from Shakspere, and give most of a long preface to discussing Byron's indebtedness to Dr. Johnson. His argument strikes us as a little strained, and we feel that Dr. Johnson could have made a memorable comment on his conclusion that "the leading man of letters of the eighteenth century and the leading man of letters of the early years of the nineteenth century are never found in such dire antagonism as precludes their meeting one another on a common platform of love of humanity and love of truth."

In his estimate of Byron, Mr. Bettany perhaps insists too much on the "taint of the histrionic spirit." He says that this histrionic spirit is the natural birthright of a man of aristocratic race and temper—a theory that prompts speculation and would bear elucidation. He also thinks that it provoked Byron to make "Italy the centre of his stage, and to let the lime-light play quite impartially on all his qualities, good, bad, and indifferent." Excitable people, plebeian as well as aristocratic, often appear histrionic; and if Byron had desired to dwell in the glare of the lime-light he would surely have stayed at home. Several more probable reasons for his self-imposed exile easily suggest themselves. To possess the Romantic spirit is equivalent to possessing a poignant distaste for the conditions to which one is born, and a burning contempt for the thing that is. The true Romantic has always been a vagabond and a dissenter. Aristocratic England has never, on the whole, been dissatisfied with itself, critical of its conditions, eager to breathe a rarer ether. Byron simply stifled in the England of his day. From his boyhood he kicked against the pricks. He wanted the remote, the ideal, the fabled blue flower, the moon. And if more prosaic reasons should be required to relieve him from the imputation of prolonged, rather vulgar insincerity, is it not enough to say that he was poor and loved splendor—a taste that could be gratified more cheaply in Italy than in England; that he delighted in political revolutions, conspiracies, and even casual street fights, for all of which Southern Europe afforded more opportunities than did the British Isles; and that, finally, after his separation from his wife, he really could not live in the same kingdom with his mother-in-law, and hope to retain his sanity?

The Reconstruction of Religious Belief. By W. H. Mallock. Harper & Brothers. 1905.

For the last four hundred years there has been a continuous series of attempts to adjust religious belief to the discoveries of science in astronomy, geology, ethnology, and biology. The defenders of the current orthodoxy (largely clergymen) have usually begun by denying the conclusions of science; later, forced to accept them, they have undertaken to bring them into harmony with religion, commonly by some modification of theological dogma. There are exceptions, but this has been the rule. In one respect Mr. Mallock differs from most of his predecessors in the task of reconstruction: instead of denying or trying to minimize scientific results, he accepts them all fully and unreservedly, giving attention mainly, however, to the most recent discoveries in physics, chemistry, and biology. There is no essential difference, he holds, between living organisms and what is commonly called dead matter—all matter is alive. Mental activity is part of the universe, having its seat in the thought-organs of the brain, which associate and combine the impressions prepared by the sense-organs, and every act of man is conditioned by preceding events that reach back in a causal chain to the remotest conceivable aspect of the universe. Having thus frankly stated his position, he is free to express his contempt for those champions of theology who, in his opinion, misunderstand or dodge the questions at issue, and particularly for the method of arguing which, but that it is practised in good faith, he would call "theological card-sharping"—that is, the demonstration of some obviously true proposition, and then the adroit substitution, in its place, of the proposition to be proved, examples of which procedure he adduces from Romanes and Lloyd Morgan (pp. 208 ff.) For himself, boldly accepting and adopting all that science has proved, he undertakes to show that science in part forces on us the acceptance of the fundamentals of religion, in part offers no obstacles to the acceptance of them. These fundamentals he makes God, freedom, immortality—other elements of orthodox dogma he rejects as untenable or ignores as unessential. He argues not for any one system of religion, but simply for religion.

Mr. Mallock offers nothing really new in his argument, but it derives a novel coloring from its relation to recent scientific views, and piquancy from his wit and humor. To summon Spencer (his representative of agnosticism) and Haeckel (his representative of atheism) as witnesses for religion, this is to turn the tables to some purpose. But his reasoning is serious and impressive, if not always convincing. After pointing out the value of belief as a factor in human conduct, he goes on to insist on the part played in higher civilization by the belief in human freedom, a conscious Deity, and human immortality. It is true, as he says, that belief in these things has been a concomitant of civilization. Obviously, however, this means merely that up to the present time such belief has been found to be the best working theory of life; we cannot be sure that this theory will hold in the future—the *semper ubique et ab omnibus* represents but a fragment of human experience, and is not a final argument. To say that the recognition of the supreme Principle as good "results in what by all is recognized as human development" (p. 232), is to confound cause and concomitant. As soon as society became organized, the necessities of life led men to enter into friendly relations with the higher Powers; this kindly, quasi-constitutional form of divine government (like the similar form in human political government) is not the cause of human progress, but one of its elements.

Two points Mr. Mallock brings out forcibly. He cites scientific authority for the proposition that all that is, is implicit in all that was, that the universe, as a connected whole, must always have contained in itself every one of its evolved products, not only molecules, but also instincts, aptitudes, combinations, and arrangements. The inclination or emotion that leads one atom of oxygen to unite with two of hydrogen to form one molecule of water, and the inclination that leads the brain to form thoughts—these two are essentially one, and must have existed in the original structure of the universe. And so, he adds, Spencer's primeval homogeneity of matter is, from the point of view of science, impossible; matter must always have been highly differentiated, and must always have contained life, with its elements of thought and emotion. He concludes that, for such a universe, instinct from the beginning with all that is highest in man, the only explanation is a theistic one.

As to the crucial points of human freedom and divine goodness, Mr. Mallock frankly abandons all attempts at explanation, and falls back on the fact that there is no difficulty in religious belief that does not exist in all other belief. Our conceptions of space, time, the constitution of matter, motion, consciousness, all involve insoluble contradictions—they are logically unthinkable, yet men accept and act on them. These belong to ordinary, every-day life. In the higher life the ideas of goodness and freedom as constituent parts of the universe, equally unthinkable, are equally necessary. As to whether they have their source in a conscious and good divine being, some conclusion must be arrived at, for mere negation, the utterance of despair, is fatal to life. Science, Mr. Mallock holds, forces on us the conviction that man's conscious, moral nature, with its freedom and purposive character, belongs to the essence of the universe. Religion is thus firmly established in the nature of things, but, to retain its ascendancy, it must accept all the ideals of knowledge, culture, mundane progress, and enjoyment which hitherto it has barely tolerated.

Mr. Mallock may be said to show that there is nothing in the recent results of physical science (he does not deal seriously with philosophy) that forbids religious belief, and much that accords with and leads to it—that religion, in a word, if not absolutely demonstrable, is, from the point of view of physical science, not irrational. The book is brightly written and the thought is throughout interesting. The proof-reading leaves something to be desired.

Greatness in Literature, and Other Papers. By William P. Trent. T. Y. Crowell & Co. 1905.

This volume contains, besides the titular essay, seven papers on related subjects: "A Word for the Smaller Authors and for Popular Judgment," "The Aims and Methods of Literary Study," "Criticism and Faith," "Literature and Science," "Teaching Literature," "Some Remarks on Modern Book-Burning," and "The Love of

Poetry." All of these are papers or addresses rather than essays, for though Professor Trent is a very clear and fluent writer, there is a certain lack of savor, of closeness of grain, in his style. His fluency is a little the fluency of the journalist who throws in a stock word rather than run the risk of clogging his vein in the search for the right one. Thus, in an attempt at a heightened passage about the purity and charm of the sixth book of the Odyssey, Mr. Trent allows himself to write "pristine purity," "paradisaical charm"; but the hacneyed adjective and the ambitious one alike are off the key. This is a slight matter, but the case is typical of the quality that makes Mr. Trent's writing stop just short of distinction.

Nevertheless, this collection of papers is uncommonly readable; it is full of a thorough love of the best in literature; it is marked by a considerable shrewdness of judgment in matters whereupon it is both easy and popular to go astray into the emotional; and it is guided by a native bias toward the best academic authority, which, if not of the profoundest doctrinal grounding, yet finds lucid, sincere, coherent expression. There is, too, a good deal of piquancy in Mr. Trent's humor, as, for example, where he remarks with feeling that "it is not easy to teach the delights of poetry to superior young persons who, with the wide knowledge of human life derived from afternoon teas or the football field, think of one as merely a harmless old fool."

To the professional mind, at least, the most interesting and provocative of Mr. Trent's papers is that on "The Question of Greatness in Literature," in which he adventures that most delightful occupation of the human understanding, and draws up a scheme for a graded hierarchy of literary masters. The grouping is as follows:

Class One: "The Universal Geniuses": Homer, Sophocles, Virgil, Dante, Shakspere, Milton, Cervantes, Goethe, Molière, and, possibly, Scott, Hugo, Balzac.

Class Two: "The Very Great Writers": Such poets as Pindar, Lucretius, Petrarch, Tasso and Ariosto, Chaucer and Spenser, Schiller and Heine; such prose writers as Rabelais and Montaigne, Swift and Gibbon.

Class Three: "Great Writers": Such writers as Catullus and Horace, Leopardi, Jonson, Dryden, Pope, Gray, Burns, Coleridge, Keats, Wordsworth, Tennyson, Byron, Shelley, and Browning.

There is material here to occupy all the critics of the earth in joyous debate until they are outdinned, whether by the sounding lyre of a new "universal" poet, or by the thunder of the trumpets of the night. We can do no more than quote Mr. Trent's five suggestive tests for the detection of a universal genius in case any one should have need of them. In the first place, the art, the technique, of the universal genius is "always high and uniform." In the second place, "the genius of none of these supreme writers seems cramped; their power is sovereign and sustained; their range is either universal or very lofty." In the third place, "each of these supreme masters has achieved a long, sustained masterpiece, or a number of masterpieces." In the fourth place, "the world writer, as his name implies, has conquered the civilized world. Whether he is read or not, his name is widely known, and his place is yielded him ungrudgingly." In the fifth place, the fame of the universal genius endures.

Wolfe and Montcalm. By the late Abbé Casgrain. Toronto: Morang.

This contribution to "The Makers of Canada" series has at length been published. To close students of Canadian history it presents nothing new since its author's views regarding such leading actors in the campaign of 1759 as Wolfe and Montcalm, Vaudreuil and Lévis, Bougainville and Bourlamaque were set forth during his lifetime in numerous volumes and essays. But those who have not devoted special attention to Canadian affairs may be surprised to find that the most voluminous French Canadian writer of recent years deems Lévis to have been a greater general than Montcalm.

"Montcalm and Lévis had in common," says the Abbé Casgrain, "great military qualities, unflinching bravery and a consummate knowledge and experience of the art of war; the latter had the better judgment, more broad-mindedness, greater coolness, and even superior intrepidity in action. It was Wolfe's good fortune not to meet Lévis on the Plains of Abraham; otherwise, while the engagement at Montmorency was only a temporary check to his plans, that of September 13 might have meant to him only disaster and ruin."

Since he was writing a volume in the popular series, the Abbé Casgrain may have felt absolved from the duty of waging warfare against the most determined of his opponents in the historical field, M. Kerallain. He simply affirms, although the balance of opinion at present makes against this view, that Bougainville was completely outwitted by Wolfe, and through culpable negligence made his general lose the decisive battle.

At what date the Abbé Casgrain completed his manuscript we are not told, but the publishers, in issuing the book, have thought it necessary to furnish a special introduction dealing with the more debatable points, and also a set of notes wherein matters growing out of recent literature are discussed. "We are assured," runs the introduction, "that the readers of this book will find their interest in the narrative deepened by very reason of the strength of the author's convictions, and it is in order that these strong convictions may not give the book an undue tincture of prejudice that we have thought it proper to embody in the introduction views that are not infrequently at variance with those which the Abbé Casgrain has so ably expressed." There follows a review of evidence on the various points at issue between Casgrain and Doughty, and it should be possible for the discriminating reader to see where the Abbé went rather farther in defending his favorite positions than he ought to have gone. At the same time we must acquit him of having, in this his latest volume, been blinded by patriotic prepossessions to the faults of Vaudreuil. In our opinion, it is true, the Governor of New France receives less condemnation than his action deserved. However, Casgrain was showing considerable candour when he wrote: "His character was feeble, and he was irresolute, unenlightened, jealous of his authority, and was taken advantage of by a corrupt *entourage* which he was incapable of dominating." These words could not have been written without a certain pang, and in closing our notice of Casgrain's final work we would think of him as one who strove to secure from Laval University a recognition of Parkman's eminence, and as a widely read historian who has done something to adjust the perspective by placing in high relief the cause and ideals of New France.

HENRY HOLT AND COMPANY'S RECENT BOOKS

Published at 29 West 23d St., N. Y.

NATURE

LANKESTER'S EXTINCT ANIMALS. *The Tribune* says: "Opens up a world of new interest . . . popular rather than technical." ($1.75 net.*)

KELLOGG'S AMERICAN INSECTS. The latest and most comprehensive book on its subject, yet pleasant reading. (823 illustrations. $5.00 net.*)

LOTTRIDGE'S ANIMAL SNAPSHOTS. Some 85 remarkable photographs of familiar wild animals and birds with interesting papers on their lives and habits. *Field and Stream* says: "No more commendable book treating of wild life has ever come under our notice." ($1.75 net.*)

JORDAN'S GUIDE TO THE STUDY OF FISHES. The latest work on this subject, by the leading American icthyologist, and highly "readable." (Two volumes, 934 illustrations, 1223 pp. $12 net.*)

DRAMA

STOPFORD BROOKE ON TEN PLAYS OF SHAKESPEARE. An interpretation of the methods of Shakespeare as an artist. Not so much an analysis as an appreciation of "Midsummer Night's Dream," "Winter's Tale," "Merchant of Venice," "As You Like It," "Richard II.," "Richard III.," "Macbeth," "Tempest," "Romeo and Juliet," and "Coriolanus." ($2.25 net.*)

STEPHENSON'S SHAKESPEARE'S LONDON. A vivid portrayal and a careful and scholarly study of the topography, customs, and picturesque side of Elizabethan life. Ill'd from old prints. ($2.00 net.*)

RUSSIA AND THE PHILIPPINES

WALLACE'S RUSSIA, REVISED AND UP-TO-DATE, is steadily growing in popularity. *The London Times* says it is "in the same class as Mr. Bryce's 'American Commonwealth.'" ($5.00 retail.)

WILLIS'S OUR PHILIPPINE PROBLEM. *The Evening Post* says: "The authoritative indictment of our Philippine policy to date." ($1.50 net.*)

CHAMPLIN'S YOUNG FOLKS' CYCLOPAEDIAS

Profusely illustrated, $2.50 each.

A compilation of industrial and allied facts that no manufacturing business, jobber, or exporter can afford to be without.

Over 2000 pages. Quarto. Sheep, $10.00 net, Half Russia, $12.50 net. Patent index, 50 cents extra.

"A volume remarkable for the amount of information it contains, based upon official data from every quarter of the globe."
—*The Boston Herald.*

LIPPINCOTT'S STANDARD REFERENCE WORKS

THE NEW 1905 EDITION

Chambers's Encyclopaedia

The corner-stone of any library is a good encyclopaedia—it is indispensable.

Chambers's Encyclopaedia

is not only the acknowledged encyclopaedia for the busy man and student, but also carries the finest illustrations of any encyclopaedia.

COMPLETE IN TEN VOLUMES.

ONE DOLLAR secures the use of the entire set at once, and the balance can be paid in little-at-a-time amounts.

Lippincott's Pronouncing Dictionary of Biography and Mythology

By JOSEPH THOMAS, M.D., LL.D.

This magnificent work, which for years has been in its department without a rival in the estimation of scholars, has lately undergone an extensive revision, which was rendered necessary by the great strides that have taken place in every field of human activity in the last few years; it is now offered to the public in a greatly improved form, embracing beside the revision of the articles included in previous issues, numerous new biographical sketches of persons who have lately become of sufficient prominence to merit mention.

Subscription edition in two large octavo volumes. 2550 double-column pages.

Buckram, $15.00; half russia, $17.50; half morocco, $20.00.

THE NEW EDITION OF

Chambers's Cyclopaedia of English Literature

There is no single work of more importance for library, school, and college than this.

A clear and comprehensive survey of English literature from the beginning to the twentieth century.
Contains an authentic biography of every American and English writer of note, whether poet, dramatist, novelist, or historian.
The material condensed into the three volumes of Chambers's Cyclopaedia of English Literature would ordinarily fill a dozen or more books.
It is the cheapest authoritative reference work of similar scope now in print.
It contains the essence of hundreds of the most valuable books in English literature, and is a library in itself.

Illustrated with approved portraits and drawings. Contains over 2500 pages. A detailed Table of Contents in each volume. Complete in three imperial octavo volumes stoutly bound.

Sample pages and full particulars of these valuable works sent on application.

THE LATEST AND GREATEST ACCOUNT OF ANTARCTIC EXPLORATION

The Voyage of the Discovery

BY

Captain ROBERT F. SCOTT, R. N.

Superbly illustrated with 12 full page colored plates, maps, photogravures and 250 half-tone cuts. 2 vols., $10.00 net.

This remarkable expedition spent two winters 400 miles farther South than any former wintering party, established a new farthest South record and made many geographical and scientific discoveries of the greatest value and importance as results of most thrilling sledge journeys.

"The exploration conducted by Captain Scott was undoubtedly the most important that has yet been undertaken in Antarctic waters."—NEW YORK TRIBUNE.

"The two noble volumes are a worthy record and conclusion of the most important undertaking of its kind in all history."
—BROOKLYN STANDARD UNION.

"The ablest and most interesting account of travel to which the present century has yet given birth."—LONDON SPECTATOR.

A HISTORY OF EGYPT

by

JAMES H. BREASTED

"A most valuable and interesting work. It gives us what, until very lately, it was impossible to get—a sane idea of the prehistoric period and of the first dynasties. . . . We must not fail to mention the wealth of illustrations excellently selected."—*The Independent.*

Illustrated, $5.00 net, postage 36 cents

Conant's Original Exercises in Plane and Solid Geometry

50 Cents

This book contains 900 theorems, constructions, and numerical problems designed to supply material for original work in plane and solid geometry. The exercises have been arranged in a somewhat promiscuous manner, because in the solution of an original problem the student should be given full liberty to apply any method he can devise. Original problems are always, or almost always, set, but freedom of choice is always given as far as the method of solution is concerned. Diagrams are occasionally included as a help to the student in the solution of the more difficult problems.

KATE DOUGLAS WIGGIN'S
ROSE O' THE RIVER
By the Author of "Rebecca"

AMERICANA

The Travels of John Lederer from Virginia to Carolina in 1669 and 1670. Published London, 1672. Beautiful reprint of this very rare book, limited to 300 copies, with facsimile of the Map. Price $2.00.
GEORGE P. HUMPHREY, Rochester, N. Y.

"Will the Coming Man Marry?"
By MADISON C. PETERS. Ready October 15.
Postpaid $1.00.
THE JOHN C. WINSTON CO., Publishers, Philadelphia

THE MAGAZINE OF HISTORY

WITH NOTES AND QUERIES

the legitimate successor of Mrs. Lamb's *MAGAZINE OF AMERICAN HISTORY*

is the only monthly devoted to American History, and covering the whole field. Illustrated.
50 cents a number, $5.00 a year.
The second year will begin January, 1906. (Back numbers furnished).

OPINIONS:

It duplicates in form and character of contents its prototype, which for so many years was one of the most interesting of American magazines.—C. S. BRIGHAM, Librarian R.I. Historical Society.

I am delighted with it, and think in arrangement, in well-sustained interest, and in appearance it is worthy of all praise.—THOMAS L. MONTGOMERY, State Librarian of Pennsylvania.

I may say that the new magazine surpasses the old, particularly from an historical point of view.—N. E. DIONNE, LL.D., Librarian of the Legislative Library, Quebec.

WILLIAM ABBATT, Editor and Publisher,
281 FOURTH AVENUE, NEW YORK.

JAPAN'S BRYCE

Mr. Stead's Able Study of the Causes of Japan's Position.

GREAT JAPAN

8vo. $2.50 net, postage 18 cts.

"It does for that country much what MR. BRYCE did for the UNITED STATES in his AMERICAN COMMONWEALTH."
—*N. Y. Times.*

Attractive Books from the Crowell List

Scott

WAVERLEY NOVELS

De Luxe Edition, from large new type on high-grade paper, superbly illustrated from portraits, scenes and paintings by the Fine Arts Association of Scotland. 168 photogravures and half-tones.

25 volumes, bound in extra cloth with gold stamping and gilt tops, per set, $31.25; half calf, $62.50; half morocco, $75.00.

After all, what more acceptable gift than a fine edition of a favorite author?

Ruskin

COMPLETE WORKS

A new De Luxe edition, remarkable in being at once the most complete yet published; the largest type, and containing a splendid series of 80 photogravures, 311 half-tones, and 10 color plates, many being by Ruskin himself.

30 volumes, bound in extra cloth with gold stamping and gilt tops, per set, $37.50; half calf, $75.00; half morocco, $90.00

Greatness in Literature

By W. P. TRENT

"Prof. Trent's book is one that merits the attention of students of literature, because of the stimulating way in which it raises fundamental questions."—*Springfield Republican.*

By mail $1.30.

The Diary of a Bride

"Reveals a wealth of tender sentiment that reminds one of James Lane Allen's 'Kentucky Cardinal.' It is a book that warms the heart."—*Pittsburgh Gazette.*

With special type designs and decorated cover. By mail, $1.10.

Vital Questions

By HENRY D. CHAPIN, M.D.

A timely discussion of important problems of life, which—says the *Outlook*—"is a valuable help to thoughtful living." And the *N. Y. Times Review* adds: "One must account the book exceedingly readable, earnest and useful."

By mail, $1.10.

Business Philosophy

By BENJAMIN F. COBB

"This book should be not on the desk, but in the hands of every man engaged in business. It takes up all the questions that the up to-date man is required to know."—*New Orleans Daily News.*

By mail, $1.30.

Stories From Wagner

By J. WALKER McSPADDEN

"An excellent compilation for young students of music or myth. Directed primarily to the needs of young people, it is worth the attention of older ones, as are all really good young books." *New York Evening Post.*

Illustrated, 60 cents upward.

Stories From Plutarch

By F. JAMESON ROWBOTHAM

"Told in a pleasant, readable fashion which will awaken the interest of the children and lead them to read further."
—*New York Times Review.*

Illustrated, 60 cents upward.

Old-Fashioned Flowers, Field-Flowers, and Chrysanthemums, three charming essays, in holiday garb. Illustrated in colors, 12mo, net $1.20.

The Poems of John Keats
Edited, with an introduction, by E. D. Selincourt. Frontispiece in Photogravure. 8vo, cloth, net, $1.80.

The Nation.

NEW YORK, THURSDAY, DECEMBER 7, 1905.

The Week.

The greatest possible defect of a book, declared the Port Royal logicians, is not to be read. The same is true of Presidential messages; and Mr. Roosevelt has made his of such inordinate length that it will be little read. Advocating severe cutting down of Government publications which "no human being" can read, he unhappily produces one of that sort himself. His portentous message, breaking all records and all backs, might have been boiled down to five columns, with appended note: "For the rest, see my speeches and previous messages *passim*." Yet there is one set of his speeches to which he could not refer. We mean his tariff-revision speeches of 1902. All that zeal has cooled. To judge by this message, President Roosevelt has become the weakest of stand-patters—one without real convictions, that is, and swayed only by political expediency. He masses the futilities for doing nothing with the tariff in the most approved manner—in a manner, we add, that will be applauded by those life-insurance officials and others who paid money to the Republican committee last year on the distinct understanding that the tariff plunder was to be let alone. This suggests another part of his message which is disappointingly feeble. His references to political corruption, and especially to contributions to campaign committees by corporations, are not what was expected of Theodore Roosevelt. He perfunctorily renews his recommendation that there be publication of campaign expenditures, and would have all contributions by corporations forbidden by law; but he makes no allusion to the scandalous diversion of trust funds to aid in his own election—has no word of indignant repudiation of his own agents who sought and received such unlawful contributions. To this, then, his reported Oyster Bay indignation has simmered down.

The President's battle-horse is, of course, his project of railway-rate regulation. As he distinctly refuses to indicate "the exact terms" of the law he desires, it is at present possible to note only his general ideas. These are well known. He wishes Congress to give some "administrative" body power to fix railway rates, which shall go into effect "within a reasonable time and subject to review by the courts." Yet he has discovered that "it is not possible adequately to secure the enforcement of any law of this kind by incessant appeal to the courts." Still, the courts are open! A sharper sense of that fact has apparently led the President to doubt if the millennium will be ushered in even by the adoption of his suggestions. "It is a complicated and delicate problem, and all kinds of difficulties are sure to arise in connection with any plan, while no plan will bring all the benefits hoped for by its more optimistic adherents." At one moment Mr. Roosevelt seems to think that rebates and the abuses of private-car lines and terminals and switches and icing charges are the main things to strike at—which, of course, can be done without recourse to Government rate-making; at another, he says that unless the rate-making power is granted "there is little use in touching the subject at all." The President also appears to be ready to offer the railroads legalized pooling if they will consent to his plan; at least, we do not know what else he can mean by his proposal to "permit . . . agreements clearly in the interest of the public," provided the Interstate Commerce Commission first be given the power to "fix a maximum rate." This whole subject, obviously, will be only too much with us all the coming winter; and we must be content to-day with remarking that the President is plainly less sure of his ground and of himself.

The Administration finds itself in a singularly humiliating position in relation to Germany. That country has denounced the reciprocity agreement in effect with us since 1900, because of the rearrangement of its tariff legislation, and is now ready to negotiate anew. So are the President and Secretary Root, and so are the merchants and manufacturers whose business is going to suffer by the higher tariff which will be in force after March 1. But apparently nothing can be done to alter the situation. Secretary Root, after much difficulty, has succeeded in discovering one lone Senator who is in favor of a new reciprocity agreement with Germany, but even he admits that there is no chance whatever of inducing Congress to act. There is no possibility of finding sixty Senators who will vote as he feels, and a two-thirds vote is necessary to ratify a treaty. The long list of rejected reciprocity treaties, the failure of Congress to do justice to the Filipinos, all confirm this view. So, in effect, Mr. Root has to say to Baron Sternburg: "The President wants to join you in enacting a new treaty, and so does his Secretary of State and all the business interests concerned. But the 'stand-patters' control this Government, and decline to allow any tinkering with the tariff lest the whole structure come tumbling down. Hence we of the executive branch can only twiddle our thumbs, though admitting the justice of your request and acknowledging that a new reciprocity treaty would add considerably to our material prosperity."

That paragraph in a report of Col. Edwards, chief of the Bureau of Insular Affairs, in which he recommends that the application of the coastwise shipping laws to Philippine trade be deferred until April 11, 1909, though short, is of great importance. It can have only one meaning: that, in the opinion of the American authorities most concerned with the welfare of the islands, American ship owners, in spite of nearly three years given them for preparation, have not yet made such arrangements as will furnish inexpensive transportation in American bottoms. This falls in with the testimony of Mr. Barber, who, after a visit to the Philippines some months ago, declared that American shipping was no better prepared then to carry all the island commerce with this country than it had been when the Philippine shipping bill was passed, and that he did not believe it would be much better prepared after another year. Recent bids of American and foreign carriers on coal for the islands are said to have been $7.00 and $4.87½ per ton, respectively. The difference is the tax which will be imposed by the operation of the coastwise laws. As this and the provision for subsidized railroads are the only important pieces of Philippine legislation enacted since the "pacification" of the islands, the demand for a delay of three years more is a poor compliment to the wisdom of the National Legislature.

Among the other labors of the Commissioner of Corporations, it is stated that he is "working hard" on a "report on the steel industry" which is to furnish the President "forceful arguments" when he "decides that the time has come to recommend a scaling of certain tariff schedules." It is not, however, lack of arguments that troubles the President. He had them and produced them in 1901. He was as hot then to revise the tariff as he is now to make railway rates. But that was before the stand-patters had got him down. As for arguments for scaling down the steel duties, they meet him wherever he turns. If he takes up the report of the subsidy committee, for example, he will find even its hardened protectionists revolting at the fact that our steel-makers were charging our shipbuilders $32 a ton for plates, at the same time that they were selling them to the Belfast builders for $22. This, said the Repub-

licans of the committee, "calls for some plain speaking," since "these steel mills simply heap an unjust and intolerable burden upon an interest now well-nigh prostrate." But woe be to the man who touches the tariff making such outrages possible!

Representative Payne, Chairman of the Ways and Means Committee, informs the artists of America that they cannot have the tariff taxes on paintings and statuary removed. The time, he says without a blush—at least, with none visible from this distance—is not "opportune" to revise the tariff, and, of course, the "whole tariff question" would be "opened" if any rash Congressman should introduce a bill to make art free. Besides, he explains, the artists do not know their own business. But does Payne know his own business? He says that he once "befriended" the artists by getting inserted in the McKinley tariff "a clause removing the duty on works of art imported from abroad." But, veracious Payne, Section 465 of the McKinley bill levied a duty of 15 per cent. on "paintings in oil or water-colors, and statuary." Pursuing his muddled reminiscences, Mr. Payne says that it was the Wilson tariff, "if I am not mistaken," which "placed the tariff in operation again." Well, you are mistaken, Congressman. The tariff on art was already, as we have seen, in "operation," and the Wilson bill removed it—see Section 575 of the tariff act of 1894. Sereno E. Payne was a member of the Ways and Means Committee at the time; but, of course, he was too busy denouncing the Wilson bill to know what was in it. Thus it was the ignorant and wicked Democratic party that really "befriended" the artists of America; as soon as the party of intelligence returned to power, it proceeded to clap on the tax again, to the tune of 20 per cent.

Embarrassing as is the resignation of the United States Minister to Cuba just at this time, Mr. Squiers was clear-eyed enough to perceive that his usefulness had come to an end. Secretary Root's admirable letter, quashing the hopes of the Isle of Pines annexationists, contained, also, an implied rebuke of the Minister, and his withdrawal promptly followed. The situation with regard to Cuba is difficult enough. There are plenty of American annexationists in Cuba who will seek every opportunity to embroil its Government with the United States in order to achieve their ends. There are others who will demand American interference for sanitary reasons, or because of the increasing unrest in the interior; and the vicious Platt Amendment will play into their hands. It is in every way necessary, therefore, that the scales should be held evenly at Washington, and that the State Department should be influenced neither by prejudiced representations nor by men with axes to grind. Hence, Mr. Root's evident desire to do the right thing by Cuba, as manifested in his Isle of Pines letter, is a welcome augury of future justice to the Republic.

With Mr. Odell's reported desire to have Postmaster-General Cortelyou and Cornelius N. Bliss questioned by the Insurance Committee as to the political contributions they received from the insurance companies, we are in hearty accord. Mr. Odell's motive is obviously to discredit those pure Washingtonians who are now bent on reading him out of the party. To our mind, justice to Mr. Roosevelt and Mr. Cortelyou calls for a clearing-up of this whole question of the methods of the Republican National Committee. The Insurance Committee has already performed an inestimable service in demonstrating the alliance between corrupt politicians and the corrupting corporations; we want the picture complete, bringing out the national aspect of the matter, lest people notice its unfinished condition, and lay it to tenderness for President Roosevelt. We heartily welcome the report that he had declared that both Platt and Odell must go. That would be in line with his best traditions, and should be the kind of warfare in which he could most delight. Platt and Odell —and Depew. These three must be retired forthwith unless the party desires to be pulled down by them to defeat as well as disgrace.

George W. Perkins will retire from the vice-presidency and the chairmanship of the finance committee of the New York Life. When he attempted to be both vice-president of the life-insurance company and partner of J. Pierpont Morgan, the latter gravely doubted whether it was possible, even for a man of Mr. Perkins's energy and vivacity, to hold the two positions. The event has amply justified Mr. Morgan's misgivings. Among the most unpleasant revelations of the insurance investigation have beeen those in regard to Mr. Perkins's performances in his dual rôle. As officer of the insurance company he had to drive hard bargains with the partner of Morgan; and as partner of Morgan he had to see that the officer of the insurance company ("the trustee for widows and orphans," as the beautiful phrase is) did not overreach him. The plain statement of facts on the witness stand made it obvious to everybody that Mr. Perkins could not try to serve two masters without damaging both them and himself. His retirement from the insurance business is the first open step toward house-cleaning in the New York Life; but it cannot be the last. The McCall management and President John A. McCall himself no longer command public confidence. To blink this fact is useless. The juggling of the annual statement of the company, the secret ownership of stocks which were presumably sold, the dabbling in the Steel stock syndicate through an intermediary, the elaborate and costly machinery for the corruption of legislatures—all these things have served to write down the name of McCall in that black-list of insurance officials who must resign.

All the speeches at the City Club's "Political-Independence" Dinner last week were forward-looking. The great victories already won were less dwelt upon than the battles yet to be fought. Reform has evidently put its hand to the plough and will not look back. To improve the weapons with which debased politicians are to be continuously attacked; to obtain a simpler, surer ballot; to make the laws against corrupt practices more thoroughgoing and to enforce them; to drag political manipulators out of the cellerage where they lurk and compel them to publicity; to give the people through better primary laws a better opportunity to work their will—these were the themes discussed with vigor and hope. Mr. Jerome, as usual, excelled all in terrific plainness of speech. His bold and indignant words about the degradation of the bench in New York city should cause much searching of hearts. He spoke but the truth, yet it is a truth which our easy-going Bar Association, with the profession in general and a careless public, has been too slow to admit or act upon. Judges in our highest courts boss-made, or on their knees to political machines; judges practically buying their positions and expecting to recoup themselves by mixing up justice with gain; incompetent and pliable judges in charge of such vast interests in this city—that was the fearful picture of disgrace which Mr. Jerome drew with his customary startling frankness.

No candidate for the Speakership of the Assembly approaching J. Mayhew Wainwright in fitness and independence has thus far made his appearance. He has not only followed the welcome fashion of announcing his own candidacy without consulting any boss or leader or organization, but has promulgated a platform beyond criticism. In brief, he pledges himself to do his utmost to make the Assembly a legislative body instead of a machine for registering the decrees of bosses and the corrupt corporations which create them. He will, for instance, set himself against the domination of the Rules Committee, which controls the Assembly for the last ten days of the session. During this time the worst bills are generally passed.

Like Mr. Parsons, Mr. Wainwright has raised a standard to which all who favor the reofficering of the Republican party by honest men should repair. During his five years at Albany, Mr. Wainwright has shown commendable independence, and has opposed every "strike" bill and steal which came up, and this despite the fact that he owed his election to one of the worst bosses in this State—Ward of Westchester County. In his notable fight against the Mortgage Tax bill he rendered a public service which should now stand him in good stead.

The representatives of Columbia University have promptly put an end to the football "obsession" at their institution. They displayed a courage more often wanting in scholastic circles. President Butler, too, rose above questions of expediency; was not misled by talk of "waiting until the excitement should cool down," and was quite ready to face the august disapproval of the student body which has terrorized so many college executives. Columbia has blazed the way, and other colleges are bound to fall in behind her. New York University will, we hope, come next to complete this city's leadership in the reform. Harvard seems destined to lag behind.

The introduction in the Boston Board of Aldermen of an ordinance prohibiting football within the city limits—which include the Harvard Stadium—directs attention to the possibility of reforming the game from without if reform from within should fail. For a good many years anti-football bills have been among the "freak" measures annually introduced in Western legislatures, and occasionally—in South Dakota, we believe, was the latest instance—one of these has been enacted and enforced for a short time. It is hardly to be doubted that, when the law steps in to suppress any form of public "amusement," it stops. Football, at least, cannot, like pugilism or cock-fighting, be indulged in in secret. As for public sentiment, it is true that football games in this city have drawn at least twice as large crowds as prize-fights ever did under the Horton law, yet what has been done in the one case could assuredly be done in the other. We are not prepared to argue that it should be, under existing conditions. A certain sense of academic immunities, an inheritance from the benefit of clergy, has often operated in the past to stay the hand of the public authorities.

Mr. Balfour's abrupt resignation in a recess of Parliament is not wholly unprecedented, though few Prime Ministers have had to make his humiliating confession that the Government was so tumbling about his ears that he could not go on and face the Commons. It was Mr. Chamberlain who forced the crisis. His bitter and contemptuous speech at Bristol, in which he declared that "no army was ever led successfully to battle on the principle that the lamest man should govern the march," was practically a notice to Mr. Balfour to quit. What a long series of defeats in bye-elections, with the Ministry's steady loss of prestige and even respect, could not induce the Prime Minister to do, a single utterance of his too powerful subordinate in the party compelled precipitately. Of course, if Mr. Balfour had to acknowledge that his Cabinet and his party are reduced to such impotence that they cannot carry on the Government a week longer, there was nothing for the Liberals to do but step into the breach. Sir Henry Campbell-Bannerman, who has earned the Liberal leadership by his pluck and dour persistence through the dark days of the party, rather than risen to it by commanding qualities, will doubtless form a Ministry. But its first step will be to dissolve Parliament and appeal to the country. The general election, which even Chamberlain admits can result only in a Liberal victory, will probably take place early in the year—after the Christmas festivities are over and the new registry of voters comes into effect in January.

Even England finds that she has now reached a point where she can put limits on her naval expansion. Last year she made a reduction in her navy estimates of $17,500,000; this year she expects to cut them down $7,500,000 more. The Admiralty is, moreover, to be content with four large armored ships every year, which practically means merely a replacement of obsolete or worn-out ships, or at most a slight annual increase. Undoubtedly, the total collapse of the Russian navy—far more obvious to-day than when Togo won his great victory in May—has had something to do with this decision. Still another reason is the financial one; the English rate-payer is burdened enough now for armaments. Only the United States, France, and Germany are to-day naval rivals of Great Britain, since Japan is allied to England by a treaty which is an additional reason why the Admiralty can now afford to stop the increase of the fleet. Japan's battleships may be counted as England's for many practical purposes. Moreover, as Lord Cawdor points out, England's shipbuilding resources are so great that she can always overtake a rival naval programme by reason of her unsurpassed power of rapid construction. Now if England can cry, "Hold, enough!" in this matter, it is long past time for the United States to do likewise—unless we plan the hopeless game of attempting to outdo the queen of the seas.

The agitation for universal suffrage injected into Austrian politics by Fejervary's programme for Hungary may seriously affect the position of the German element. Liberal Germans, both within and without the ranks of the Socialists, fear that with universal suffrage their numerical representation in the local diets and the Vienna Reichsrath would be considerably diminished. Experience has shown that clerical and reactionary Germans are willing to make common cause with the Slavs against the Liberals, and, notably in Bohemia, powerful aristocrats and landed proprietors, such as Prince Schwarzenberg, have openly allied themselves with the Czechs. The outlook of the Germans is still worse in Moravia, where the Czechs outnumber them nearly three to one. In Carniola, Istria, and southern Styria the Slovens are in an overwhelming majority. But even in northern Styria and Carinthia, which are preponderatingly German, a few seats may be lost by the Germans in an election based on universal suffrage. Tyrol, where the line of demarcation between Germans and Italians is clearly fixed, is in no danger of being similarly affected, while in the purely German provinces of Lower and Upper Austria and Salzburg the race question has never been acute.

The birth-throes of the new Russia continue with increasing violence and destructiveness. The deep of the naval mutiny at Cronstadt has been answered by one greater at Sevastopol, involving the loss of ships, but equally ineffective in the end. Over all is thrown a vast confusion and paralysis by railroad strikes, postmen's strikes, and telegraphers' strikes, isolating the parts of the Empire from one another, and the whole from the outside world. No such extraordinary phenomenon has ever been seen as this constraint of an absolute monarch to redress ordinary grievances which he alone has the power to redress, to grant constitutional reforms which he alone has the power to initiate, and to abdicate altogether in favor of the wild and anarchical contentions of all shades of revolutionists. If any other nation is complacently looking on at this torture, and its accompanying hell-broth of incendiarism, pillage, and slaughter, we venture to remind it that the *industrial* screws applied in Russia are all ready to be turned on in the freest country on earth, with the criminal mob as a reserve ally and terror. We saw it in the cutthroat railroad strike of 1877; we saw it in the cutthroat coal strike of 1903. We shall see it again, and yet again, till our mushy morality regarding labor disturbances gives way to saner views of what man, however dissatisfied with his lot, owes to his fellow-man.

THE SENATE'S ROLL OF DISHONOR.

When the Senate of the United States convened on Monday, two of its members were absent by reason of their conviction for crime. Senator John H. Mitchell of Oregon and Senator Joseph R. Burton of Kansas have each been sentenced to six months in prison and to pay fines of $1,000 and $2,500, respectively. Both have appealed from the decisions against them; and both are nearing the end of their terms. Their effort plainly is to stave off final decision just as long as possible. Reëlection, like rehabilitation, is out of the question in Burton's case, even if he should obtain a setting aside of the verdict against him; while Mitchell, who is broken down physically as well as morally, is desperately clinging to his salary as his only means of livelihood. Their empty chairs should be a solemn notice to their fellow-Senators that the prestige of the "most august assembly on earth" has suffered a terrible blow.

But even worse for the Senate than the shameful absence of Burton and Mitchell is the presence of three others whose names figure also on the Senate's roll of dishonor. Thomas C. Platt, Chauncey M. Depew, and Boies Penrose will be pointed out more often than others, and always as disgraced Senators. The name of Depew has become a byword. Within a year of his reëlection for a second term, he has fallen so low in public estimation that a clergyman has called for his expulsion from a social club, and he himself is practically ostracized. Not a vote would be cast for him were he a candidate for reëlection, and the demands for his resignation will grow in volume. Indeed, it will be surprising if there is not an effort made in the Legislature to pass a resolution asking for it. Against his colleague, the feeling is not so bitter, perhaps because he is physically feeble, perhaps because his character has been better known. For years past, Platt's sale of legislation has been understood and his personal reputation has been pretty clearly fixed. Yet his recent testimony before the Insurance Committee has branded him more deeply than ever. He stands self-revealed as blackmailer and corruptionist. But he and Depew will, as the *Independent* says, "continue to misrepresent New York at Washington"—unless they resign, and this, it thinks, cannot be expected.

The tide of indignation is running against them more strongly than ever. It is impossible to believe that they can expect anything more than the most frigid reception at the White House. Even in the Senate they cannot look for condonation. There are, it is true, other Senators who are by no means angels of light; but there are many like Spooner of Wisconsin, Crane of Massachusetts, and Nelson of Minnesota, to mention only a few of their party associates, who must feel themselves humiliated by association with the Senatorial representatives of New York. Of course, it will ill become men like Dick of Ohio and Alger of Michigan to throw stones. Senator Fulton of Oregon will not desire to figure as a great purist. Senator Dryden might be excused for a little of that feeling which makes us wondrous kind, and the silver and gold Senators of the West will doubtless not be over-interested in the presence or absence of Messrs. Platt and Depew. Such men as these will not be found to have very much more sympathy for Boies Penrose, the Harvard graduate, the man of family and means, who has chosen for his political bedfellows the basest of the Philadelphia ring, with the result of being repudiated by Roosevelt, Root, and all the national leaders. Penrose has sinned against the light. His political extinction is clearly foreshadowed and cannot be delayed much longer. Even in the Senate there should be possible at least a measure of social ostracism. Influence on pending matters? Platt, Depew, and Penrose will be without any. But it is none the less desirable that they should be made to realize how obnoxious is their personal presence.

In this way the Senate can not only help to raise its own tone, but be of service to both Pennsylvania and New York. That the time has come for a change, the elections have made quite plain. The people have emphatically proclaimed their desire for better men in public life. Moreover, the Senate at its present session welcomes for the first time several members who give every promise of honorable service and marked usefulness. Senator Brandegee of Connecticut is expected to reflect credit on his *alma mater*, Yale, and his State. William Warner of Missouri comes with the hearty endorsement of Gov. Folk and his friends and neighbors. Reëntering public life after a long retirement, he is free from entangling alliances, and may be counted on to help uplift the Senate. Another man who should contrast markedly with the oil-and-sugar Senators is Burkett of Nebraska. His endorsement by popular vote was a notable tribute to his character. Isidor Rayner of Maryland, too, has won his spurs before taking his seat. His denunciation of the Gorman constitutional amendment to limit the suffrage not only helped to defeat that infamous proposal, but stamped him a man of ability, courage, and convictions. From La Follette of Wisconsin his admirers expect great things—even an assault upon the Presidency—provided he can decide whether to be lecturer, Senator, or Governor. In short, the new recruits are a promising body—in the main, men of force and individuality, and are not to be written down merely as representatives of railroads, the protected interests, or the Trusts. The outlook, therefore, is distinctly encouraging. But this should only stimulate effort to free the Senate from those whose corruption or surrender to corporate interests has too long stained the reputation of a great legislative body.

MR. JEROME AND THE JUDGES.

"For casting a disdainful glance at the judge of the Supreme Court of Darmstadt, the public executioner has been fined £4." That minor news item of the day has its resemblances to what has been said in this city since Mr. Jerome's speech about our Supreme Court judges. He has not been fined for his disdainful glance, but he has been well lectured. He has been accused of vague railing. "Name names!" is the demand made upon him by those who profess sudden ignorance of what judges he really means. Mr. Jerome has been taken aside by kind but firm mentors of the press and told that he has been reckless, has grossly exaggerated, and has done more harm than good. Judge Parker, in a gallant sortie *pro domo suâ*, comes forward to pay a compliment to the existing judges, which he immediately makes left-handed by expressing the hope that "bold and vigorous effort" will be made to "strengthen the bench."

Really, the surprising thing about all this is that there should be any surprise. The facts which were alluded to by Mr. Jerome are known to all. They have been set forth in sworn testimony. True, the District Attorney violated a comfortable precedent by blurting out in public what thousands of lawyers have whispered in club-corners. He does not keep his indignation purely for private consumption. Seeing where the body politic is ailing, he rudely and openly strikes his hand upon the spot. Now, this very abandon of honesty and fearlessness is one of the things that make Mr. Jerome strong. But he would be the last man to imagine that his assertions disclose a great discovery. It is an old and twice-told tale. Go back no further than the report of the Committee on the Law's Delays last year, and you will find the thing set down in cold type—"the aggression of politicians upon the courts, and the baleful practice of political contributions by judicial candidates."

Memories are getting to be, we know, as evanescent as last year's snow, but even so we are amazed at the forgetfulness of Mr. Jerome's critics. Is the report of the Mazet Committee of 1899 so soon swallowed in oblivion? In that public document, hundreds of pages are taken up with an exposure of the methods of nominating and electing judges in this city. The system there revealed is precisely that which provokes Mr. Jerome to wrath. It is a compound of

commercialism and political corruption. Supreme Court judges have been, as a rule, put in nomination, not by their brethren of the bar, not by representatives of the vast commercial interests of New York, but by ignorant and venal politicians, to whom, as Mr. Jerome averred, judges themselves have had to go with bated breath and whispered humbleness. And with this disgrace has gone the added disgrace and danger of "campaign assessments"—to put it baldly, payment for a nomination—long averaging $10,000 for each judicial candidate. The whole shameful and perilous system was fully laid bare, yet Mr. Jerome is a loose-tongued fellow to cry out against it!

Mr. Croker was the blunt exponent, before the Mazet Committee, of the Tammany theory of judicial office, and there can be no doubt that it is Murphy's, too. Here is Croker's true account of the fitness of a judge—he must be "acceptable" to the inner ring of Tammany:

"Q. The organization also discusses the candidates for judicial positions, does it not? A. Yes, sir.
"Q. And for judicial positions in all the courts, whenever there is an election? A. Yes, sir.
"Q. And the gentlemen who are selected to run on the Democratic ticket for judicial offices are gentlemen who are acceptable to the executive committee and the advisers of the Tammany organization, are they not? A. Yes, sir.
"Q. Naturally so? A. Yes, sir."

This was entirely borne out by Judge Barrett's frank and illuminating testimony. He was asked if he thought Croker had any qualification whatever to make him the arbiter of judicial character, and replied, with significant evasion: "I should say, if the Constitution and laws and customs permitted it, I should prefer to leave it to Mr. James C. Carter." The contrast between brutal dictation with venality and the free choice of the bar could not well be made more pointed.

We must quote also Croker's testimony about judicial assessments, confirmed as it was by the examination of judge after judge:

"Q. And have not judicial candidates paid contributions to the organization or to its representatives, amounting to $10,000, $15,000, $18,000 sometimes? A. Yes, sir.
"Q. How much have they paid? A. I could not tell you that. Nothing like what you say.
"Q. Never? A. Well, they might fifteen or twenty years ago.
"Q. But how about recent times? A. In recent times they have not.
"Q. Have they paid as much as $8,000? A. Probably they have, seven or eight."

Probably Mr. Croker would have fully agreed with Judge Truax, who elegantly expressed the opinion that if a judicial candidate gave $5,000 to a politician, "he ought not to squeal." But, in addition to the monetary consideration, Tammany expects a further *quid pro quo*. What it is, Mr. Croker explained:

"Q. They [its judges] must appoint their subordinates, as a true member of the party should? A. They should do it, yes, sir. They do not always do it, but they should do it.
"Q. And Tammany Hall expects them to do it? A. Expects them.
"Q. (Continuing). If they take her nomination, does it not? A. Yes, sir.
"Q. In all matters of patronage, they should consider the organization, should they not? A. First, yes, sir.
"Q. Even in the appointment of referees? A. Yes, sir.
"Q. And you think that the judges should appoint as referees men who are in line with the Tammany organization? A. All things being equal they should, yes, sir. They should give them the preference."

Yet Mr. Fox has been blamed for saying that he would not have felt safe in taking his motion to open the ballot-boxes before certain Tammany judges!

Mr. Jerome, then, accurately described existing conditions. The question simply is whether we are to be indignant at the conditions, or at him for portraying them. It is not a mere arraignment of present evils that he made; he is looking forward to the future, is anxious to stir up a sentiment which will make impossible the sale or bargaining of judgeships next year. As he said, the politicians are getting their judicial "slates" ready; would-be candidates are doubtless grovelling before powerful district leaders; many an unfit man is, in the expressive Western phrase, "out for the ermine." But to stop this nefarious and threatening business, Mr. Jerome appeals to the Bar Association, to lawyers everywhere, and to decent citizens in general. That is the real point, and we must not lose sight of it. Jerome is at one with Judge Parker in that. Having done well to be angry, New York must see to it that the causes of her wrath at incompetent and suspected judges are removed.

MAMMONIACAL POSSESSION.

As we learn more from the failures of a great man than from the successes of a little one, so the letter of Col. Mann's which was put in evidence on Saturday is rich in reproof and instruction. In fact, we have not met with a more illuminating philosophy of great wealth. The Colonel, our readers may know, is prosecuting *Collier's Weekly* for criminal libel, that periodical having charged him with blackmailing, in *Town Topics*, various rich and vulnerable notabilities. By way of justification, the *Weekly's* counsel produced a letter from Col. Mann to the gentleman in charge of 'Fads and Fancies,' instructing him minutely how to approach a succession of millionaire "victims," who were to be wheedled, flattered, bamboozled, or frightened into paying $1,500 or so for inclusion in that delectable publication.

The list of names was long and laughable; many of our richest and proudest have had the pleasure of seeing themselves reckoned in with this Blackmailable Four Hundred. For it is the underlying idea of the precious letter that great riches necessarily mean great gullibility. Col. Mann and his allies seem to have acted upon that presumption with the utmost confidence. As practised miners in the under-world of millionairedom, they had not the slightest doubt that, wherever they could manage to sink a shaft, they would strike pay dirt—dirt, in this conception, making pay certain. Their philosophy of action was apparently something like this: "Very rich, therefore easily fooled. A financial magnate, hence vain and silly. Having great possessions, consequently a prey to toadies, sponges, and blackmailers. *Richesse oblige*—which means that it obliges the rich man to surrender to every impudent cozener that comes along."

To what financial results Col. Mann might be able to point as a practical demonstration of his theory, we naturally do not know. He wrote of a gratifying "contract" with Senator Dryden, which shows that he knew how to play upon opulent vanity in at least that case. Others, we read, were trying to "creep out" of their agreements to join the collection of sensitive plants in 'Fads and Fancies'; no mercy was to be shown them, and we hope none was. But the significant thing is the assurance with which the Colonel passed in review name after name of the most expensive, and calmly assumed that they were all "easy marks." There were our hardest-headed men of business, our keenest speculators, our grimmest promoters, our coolest brokers, our most matter-of-fact railroad and insurance men—all classed as ready dupes of a transparent bunko game.

How can such things be? Does the shrewdness which goes to the amassing of money inevitably become folly in its spending? Why could Col. Mann count so safely upon finding so large a proportion of gulls among the men of great wealth? Well, we cannot profess to have penetrated the mystery. There is evidently a world of folly behind Col. Mann's letter, but only those privileged to live in it can realize it. Lord Derby said at dinner one day: "One never knows what a lot of fools there are in England until one becomes Prime Minister." Thereupon up spake his private secretary, Sir Patrick Talbot: "Yes, and one never knows what a fool a Prime Minister may be until one becomes his private secretary." "Thank you, Pat," said Lord Derby. It is this kind of mutual knowledge from the inside which animates the Mann letter, and to which those unhappily far from the emerged tenth cannot pretend. Still, in our outside and envious way, we seem to be able to make out certain human motives which help to explain the conduct of such people as those whose names Col. Mann handled so freely.

Many of them, obviously, are new to gilded society, and at a loss how to bear themselves therein. Hence the chance of

the sharper who offers himself as their mentor. They feel that their wealth compels them to a certain ostentation, and, knowing little of rational methods of expenditure, not being collectors of books or paintings, which only bore them, they fall easily into the hands of a guide to showy publicity. He has only to tell them that "all the parvenus" are going into his little game, and their gregarious instinct does the rest. "We fought in 'Fads and Fancies,' and you were not there!"—so would they render King Henry's reproachful message, doubtless with his added, "Go hang yourself!" They think that they must be important, having so much money; and interesting, with so many to fawn upon them; and so they readily give ear to an insinuating tongue which suggests a way of informing the public that they are important and interesting. Hence the whole vast array of books about 'Successful Men,' etc., of which 'Fads and Fancies' was only the daring climax. What the schemers have to play upon is a sort of huge delusion in this class of wealthy people—mammoniacal possession, it might be called. It makes its victims subject to all kinds of strange attack and seizure, enormously inflaming their vanity, exaggerating their native silliness, and blinding them to the snares openly spread at their feet.

We know of no Society for Improving the Condition of the Helplessly Rich. Satirists have proposed such a thing, but satire has never been able to bring to earth very much rich folly as it flies. It has been said that no number of stripes laid soundly upon a donkey's back will turn him into a zebra. Concrete exposure of our martyrs to Mammon, a sudden consciousness on their part that every man of sense is laughing at them, will do them more good than all the preachers and satirists; and Col. Mann's letter will be for many of them like a nail fastened in a sure place.

"GOOD-WILL" AS AN ASSET.

The strictness with which the courts of New Jersey interpret and enforce the "liberal" corporation laws of that State is illustrated by the recent decision of Vice-Chancellor Pitney in the case of See *v.* Heppenheimer *et al.* (61 Atlantic Reporter, 843). To the economist and the practical financier, as well as to the lawyer, the opinion of the court is of great interest.

About Christmas, 1892, certain gentlemen, one of them a savings-bank official, and another a prominent lawyer of this city, organized in New Jersey the Columbia Straw Paper Company, to take over a number of paper mills upon which options had already been secured. These options were to cost the promoters some $750,000 in cash and $2,250,000 in stock of the newly formed company, which had an authorized share capital of $4,000,000. This plan would seem to have left a comfortable margin for promoters' profits, but it had the drawback of calling for $750,000 of cash, a commodity in which promoters dislike to deal. It was deemed advisable, therefore, to issue $1,000,000 of mortgage bonds, which furnished the cash needed to purchase the plants, provided a working capital of $200,000, and left a balance of $50,000 as compensation for the eminent counsel—also a promoter—who conceived the brilliant plan. Of the surplus stock not needed to purchase the mills, some $600,000 was given away as a bonus with the bonds; and the remainder, doubtless, went to that bourne from which no stock returns after the dummy directors conclude their session. It was a small affair, of course, when compared with t companies of straw and paper organized in the palmy days of 1900 and 1901. But a fairly neat job had been pulled off, nevertheless; for the promoters had bought a large part of the bonds, a now held a first mortgage on the property of those mill owners who had taken their pay in stock.

The history of this company is briefly told. Having secured control of most of the straw-paper mills, it proceeded to raise the price of the product from $20 to $28 per ton; and thereby stimulated competition, which, together with bad management, brought the organization into bankruptcy in the space of two years. Then came a receivership, and a foreclosure sale which did not yield enough to cover the debts of the company. Thereupon the receiver brought suit against the promoters, alleging that they had received stock without having made payment therefor, in either money or property; and contending that they were liable for such a proportion of their unpaid stock-subscriptions as might be needed to satisfy the debts of the company.

In defending the suit, the promoters argued that the stock of the Columbia Straw Paper Company had been issued in payment for property taken at an honest and reasonable valuation; and that the difference between the sums paid for the mills and the $5,000,000 of stock and bonds issued by the combination represented the "good-will" of the company as a going concern. Good-will, we all know, has long been held to be "property" within the meaning of the law; and what could be more reasonable, at a time when Christmas bells were proclaiming "good-will to men," than that New Jersey promoters should have injected copious supplies of good-will into the capitalization of a business corporation?

But Chancellor Pitney was unable to take this view of the case. In a review of the proceedings which must have made "eminent counsel" wince, he declared that the good-will argument had been sadly overdone. He found that the cash and stock paid to the owners of the paper mills had fully covered the good-will of those mills as going concerns; and that the newly organized corporation, not yet being a going concern, had not acquired any good-will for which stock could be issued. The promoters, to be sure, argued that the combination expected to make large profits by raising the price of its product from $20 to $28 per ton; but the Chancellor ruled against them. Prospective profits, he said, expected to arise from one's ability to suppress competition, are like the chickens the milkmaid expected to hatch from the eggs bought with the proceeds of the milk she was carrying upon her head. Equally unfeeling was his reply to the argument that similar methods of capitalizing corporations are commonly employed. Very true, said the Chancellor, but such practices have "brought obloquy upon our State," and are not warranted "by anything in our statutes or the decisions of our courts."

Best of all is the Chancellor's reply to the pitiful plea that the valuation, whether erroneous or not, had been made "in good faith." He showed that properties worth not more than $1,500,000 were capitalized at $5,000,000 by men who manifested their confidence in the future of the concern by taking first-mortgage bonds in payment for all the actual money which they put in, and accepted the stock merely as a bonus which might later be sold to the public for what it would bring. Here again the ears of "eminent counsel" and others must have tingled, as they heard or read the words of the Court. It was the desire and intention, the judge declared, to sell the shares "for more than they were really worth," and herein "lies the intrinsically fraudulent character of these transactions." He even observed that the matter was in no wise bettered by sending a board of dummy directors, consisting mostly of the employees and partners of the "eminent counsel," over to Hoboken to approve the fraudulent valuation in formal meeting. Corporations, he declared, should have "competent and independent" boards of directors to act in the interest of the future stockholders, and not of the interested promoters. In fact, he pronounced the entire contract by which the promoters sold the mills to a board of dummy directors, "a palpable fraud on the act of the Legislature."

This decision leaves one with mingled feelings of delight and consternation. If promoters cannot, under the New Jersey law, capitalize the pot of gold at the end of the rainbow or the gold brick described in the confidential circular, what, in Heaven's name, is to become of the promoting business? Furthermore, if the judgment of a dummy director is not to be accepted as final, how

are eminent financiers, as buyers, to make valid contracts with themselves, as sellers? And finally, if fraudulent capitalization approved by bogus directors can involve a five-million-dollar concern in so much trouble, what would happen if a billion-dollar corporation should ever get into difficulty? But these, after all, are questions of to-morrow; to-day it is enough to rejoice in the good sense and sterling honesty of Judge Pitney's decision in See *v.* Heppenheimer *et pals.*

A DYING RELIGIOUS CONTROVERSY.

The abolition of close communion in the Baptist denomination was announced in the New York papers a few days ago. People who are familiar with the polity of the Baptists are aware that this statement in unqualified form is far too sweeping. At a recent meeting of representatives of three national organizations—the American Baptist Home Missionary Society, the American Baptist Missionary Union, and the Baptist Publication Society—resolutions were passed which in effect declared that the doctrinal difference between the "Free" and the "Strict" Communionists was no bar to united action. Such a declaration, however, is binding only upon those who accept it. The Baptists are locally independent in the most rigid acceptation of the term; and those congregations which choose to hold to close communion may do so in spite of all resolutions and conventions. The incident, however, has its significance, not merely for Baptists, but for all who watch the dying controversies over dogma; for the bitter disputes between the "Strict" and the "Free" Communionists are typical of the quarrels which have rent Christendom into hundreds of warring sects.

Baptists differ from other Protestants—broadly speaking—in rejecting the validity of infant baptism and in holding to the doctrine of immersion. No organized body holding Baptist principles can be found before the first half of the sixteenth century—the Reformation period, in which the discussion of minute distinctions of creed raged so furiously. The Baptists, like other major divisions of the Protestant Church, have split and split again, until in this country we have, or have had, eight or ten minor organizations, such as the Six-Principle Baptists, the Seventh-Day Baptists, the Anti-Mission Baptists, and the Free-Will Baptists. The question of admitting to the communion of the Church Christians who do not subscribe to the strict doctrine of the sect, is an old one. John Bunyan himself, the greatest man whom the denomination has produced, was inclined to be lenient on this point, and in consequence he was acrimoniously attacked by more thoroughgoing Baptists. It was an age in which billingsgate was regarded as a legitimate weapon in religious argument. Not until the eighteenth century, however, was there a formal organization of Free-Communion Baptists—made up partly of persons who had been converted by the preaching of Whitefield. In 1841 the Free-Will and the Free-Communion Baptists coalesced. The main body of the denomination, from which these two offshoots sprang, has nominally adhered to Strict Communion, though in recent years the topic has been but little agitated, especially in the North, and individual churches have tacitly abandoned the old policy. These facts would be hardly worth chronicling here and now, were it not that this movement within the limits of the sect itself is a sort of epitome of the whole movement of Protestantism. First, separation; then realization that the disagreements relate to non-essentials; then coöperation in religious work; and finally union. Of course, we do not mean to say that the Protestant sects have actually united, but the conference in this city last month—in spite of the bar against Unitarians and Universalists—is a public declaration that differences of creed are small matters.

The long debate between the Strict and the Free Communionists was carried on according to the most approved methods of theologians, whether Calvinists, Arminians, Antinomians, or Erastians. Here also was the eternal conflict writ small. We have to begin with the marshalling of all the Scripture texts which can by any possibility be interpreted as bearing directly or indirectly upon the point; next, a series of deductions from these premises, each of which is treated as an inspired statement of exact truth, from which the logical inference should be as unvarying and inevitable as in mathematics; thirdly, the appeal to precedent and the practices of the apostles and the fathers; and finally the appeal to passion and denominational prejudice. There has been abundant heat, and, as is usual in these contests, too little light. Of sweetness, none. For example, the Strict Communionists used to assert roundly that all they were asking was a rigid adherence to the commission of Christ; that deviation from it was an ignorant and craven yielding to modern error, not—as the misguided and sometimes malignant Free Communionists maintained—an act of charity and Christian wisdom. One of the great champions of open communion was that eloquent English divine, Robert Hall, who is said to have preached when eleven, and who died in 1831. His writings on the subject served as an armory for half a century. He, it is true, rose above the low level of partisan rancor and the *odium theologicum.* Nothing could be better in tone than the solemn words with which he closes his 'Reply to the Rev. Joseph Kinghorn':

> "When the Spirit is poured down from on high, he will effectually teach us that God is Love, and that we never please him more than when we embrace with open arms, without distinction of sect or party, all who bear his image."

But such passages in this, as in all other religious controversies, are pathetically rare. Fruitless wrangling over the meaning of the original Hebrew and Greek, savage assaults upon character, the imputation of base motives, shocking exhibitions of hatred, malice, and uncharitableness—these have been the stigma by which for centuries men have instantly recognized the utterances of professed followers of the Prince of Peace. That a change is coming, none can doubt. One reason is the growth of toleration in all matters of opinion; another is that thousands of Christians do not care enough about their theology to offer in behalf of it even the feeblest and most amiable defence.

ERNESTO MASI'S LATEST BOOK.

ROME, October 27, 1905.

The reputation of Ernesto Masi as an historical essayist has been so long established that the Italian reading-public is by this time well habituated to regarding the appearance of a work from his pen as a noteworthy event. Masi is old enough to have a vivid personal recollection of men who took part in the Italian *Risorgimento,* while on the other hand his literary activity is sufficiently distant from those scenes to enable him to view them in historical perspective. In addition to these accidental advantages, he has acquired by his own industry an erudition which his art does not always conceal, and has been gifted by nature not only with sympathetic insight into human motives and character, but also with fineness of tact and soundness of judgment in estimating their development and influence in the world of events and action. In fact, it is not often that one sees an historical writer maintaining his course so warily and securely, equally remote from partisanship and apathy, through such a devious maze of intrigue and conspiracy, of dark and violent deeds and passions, as mark the long struggle for Italian independence. His warm Italian patriotism does not prevent his seeing some right and reason in the Congress of Vienna; and his just contempt for clerical government in the Roman States leaves him quite willing, and even anxious, to lift a part of the load of infamy under which historians have oppressed the name of Gaetano Moroni, the upstart minister of Gregory the Sixteenth.

Following previous studies by Masi of the period of the *Risorgimento,* such as 'La Monarchia di Savoia' and 'Il Segreto del Re Carlo Alberto,' besides charming treatises on other epochs of Italian literary and political history, there has recently appeared his latest book entitled 'Nell' Ottocento: Idee e Figure del Secolo XIX.' This consists partly of long and elaborate historical essays, such as those on the Revolution of 1848 and on Count Cavour and Italian Unity, and partly of short personal

and critical sketches, such as those of Gregorovius, Tolstoy, and Leo the Thirteenth. These various tractates, though of necessity disunited, are not without historical continuity—a fact which encourages me to write the present connected review.

Beginning with an essay which bears the title of "Epigoni e Precursori," Masi observes that the Italian literature of the old style finished in the eighteenth century with Metastasio, although during his lifetime the new literature of the national revival in Italy had already begun with Goldoni, Parini, and Alfieri. Only Alfieri, however, was completely representative of the new era.

"In 1769, at Vienna, in the imperial gardens of Schoenbrunn, he had seen Metastasio bow to the Empress Maria Theresa with the slight genuflexion then in vogue. This was enough. Alfieri, a youthful enthusiast of the school of Plutarch, disdainfully refused the acquaintance of the elder poet. If this had ever come to the ears of Metastasio, he would probably have pitied him for an idiot."

And so, although the reformer, the "new man," already appears in Parini, the *uomo nuovissimo* is first to be seen in Vittorio Alfieri.

"Nor will it profit us," continues our author, "in studying Alfieri and his work, to distinguish, and even to make separate, in his personality, the man, the thinker, and the poet, after the fashion of the most recent and authoritative critics. Man, thinker, and poet fulfil each other in Alfieri, and, in my opinion, explain each other in turn. A whole political and revolutionary literature—the literature, namely, of our national revival—dates back to him, precisely because he reëmbodied in himself that unity which had for centuries been broken, the unity of man, thinker, and poet, of individual, patriot, and man of letters."

In the chapter entitled "The Congress of Vienna and Italy," Masi contends that, in spite of the scandalous lives they led at the Austrian Court, and in spite of their apparent cupidity and utter disregard of national feelings, the members of that famous convention were really actuated by a profound moral purpose, the purpose of securing for distracted Europe a lasting peace and stability of tenure. And Europe, as a whole, did, as a matter of fact, enjoy substantial peace for fifty years after their deliberations. He also points out that this congress made the first attempt to determine the actual rights of ownership of the various European States, and to place these rights under the guaranty of the greater Powers. In other words, we have here the first appearance of the European Concert, although this term was first officially used in the Treaty of Paris of 1856. Dispatching with reluctance so important a study in so brief a résumé, I must also content myself with one citation from the admirable account of "The Secret Societies in Romagna and the Revolution of 1831." Masi first expresses his regret that, having in his youth known intimately a number of political conspirators, he did not take some notes of their conversation, though he retains a vivid recollection of a kind of sadness which they showed even in their cheerful moods; of their fixed, vigilant, and suspicious looks, and of their stories, which always left something in the dark; of their anxious scrutiny of every new person they met, their constant finding of hidden meanings even in apparently the most indifferent utterances; and, above all, of the hatreds and loves, alike unquenchable, which they entertained of persons and things long past.

"But," he asks himself, "although this type has now disappeared, have the moral habits and inclinations which vicissitudes of a certain kind sometimes impress on the character of a people, also disappeared? I think not. Moreover, it seems to me that the manner in which liberty is understood and employed by many Italians to-day, that close adherence to parties, which are now rather personal than political, that feeble readiness to abdicate the free exercise of one's own judgment in the face of any bold personification of vanity, are in great measure the product and final putrefactions of habits engendered by conspiracy; with this bad difference to be added, however, that the grand patriotic ideal by which the intrinsic vices of conspiracy were ennobled and condoned, that disinterestedness and self-abnegation—that constancy under suffering, that spirit of sacrifice which sometimes rose to heroism—have yielded place to egoism, to vulgar ambition, and to the most ignoble self-seeking."

The caption "The Revolution of 1848" covers a series of five essays, of which the longest and most important have for their subjects "Pius IX. and the Beginning of the Revolution," and "Pius IX. and Pellegrino Rossi." Of these fascinating studies I shall find it hard indeed to convey to the reader any adequate conception. But herein I shall make my task easier by emphasizing at the outset two lines of argument that run through both of them, and give them unity of conception and treatment in all the devious paths they are compelled to follow. First, Pius IX. was, unwillingly indeed, but necessarily in consequence of his peculiar character and position, the man who finally started the Italian *Risorgimento*, after many aberrations and vicissitudes, upon a consistent and uniform course. Secondly, Pius IX., after his flight to Gaeta, was essentially the same man as Giovanni Maria Mastai-Ferretti, the "liberal" bishop of Imola. There is nothing in the apparently violent contradictions in his career that cannot be explained by the constantly changing coefficient of the conditions in which he found himself. I do not mean to say that these ideas are entirely new, but I believe that they are given an entirely new force and value by Masi's masterly treatment.

Pius IX., was, as Gioberti said, a mediocre man in every respect—in intellect, in culture, and even in goodness. It is plain that he never foresaw the results, remote or proximate, of his actions. Having out of mere kindness of heart pronounced the word of pardon to all political offenders, he was carried away on a wave of popularity, which, for its suddenness and widespread intensity, is perhaps unexampled in history; and for his charity and benevolence let him receive all honor. But that his act was dictated no more by heroic virtue than by far-sighted statesmanship is abundantly proved by the fear and distrust with which he soon began to regard the revolutionary ruin that his weak hand had precipitated. These strange and moving events are illustrated by Signor Masi with a great wealth of historical learning and reflection. But modern historians should, much more than is their habit, seek their guiding maxims in Aristotelian writ. Sufficient to our present purpose comes one of the great philosopher's universal utterances, Γίνονται αἱ στάσεις διὰ μεγάλων ἀλλ' ἐκ μικρῶν: "Revolutions are brought about through great causes, but by small incidents."

Most readers of the story of Italy in the nineteenth century are, I suspect, made to see in the person of Pius IX. too violent an antithesis. Nor can it be denied that his career presents opportunities for contrasts of the most Macaulayese and tempting variety. He first appears prominently as the Bishop of Imola, of whom Gregory XVI. said that the very cats in his house were Carbonari; as the intimate friend of the humane and enlightened Count Pasolini, and so profoundly impressed by reading Gioberti's 'Primato,' Balbo's 'Speranze d'Italia,' and D'Azeglio's 'Casi di Romagna,' that, on setting out for Rome to attend the conclave of 1846, he put these books in his trunk to give to the new Pope, little dreaming that he had thus destined them for himself. His single word of pardon aroused that cry of "Viva Pio Nono!" with which the Two Sicilies rose against the Bourbons, Milan and Venice against the Austrians, and which was heard even on the barricades of Paris; with which the soldiers of Charles Albert crossed the Ticino, and the Swiss revolted against the Sonderbund. The Turk sends him ambassadors, heretical England sends a minister, Lord Minto, and Richard Cobden, the apostle of commercial liberalism; Daniel O'Connell, going on a pilgrimage to see him, dies on the way, and Jews kiss the hem of his garment as if he were their expected Messiah. In two years' time comes the allocution of April 29, which proclaimed to the world his desertion of the nationalist cause. For that this was Pius's own act cannot be doubted. It is true that he prepared a proclamation intended to soften the statements of the allocution, the proofs of which, if we are to believe Pasolini, were surreptitiously garbled by Cardinal Antonelli. But the retraction which thus failed of its object was due to fright at the enraged Roman populace and to the pressure of liberal friends. After making all due allowance for the influence of Jesuits and of obscurantist cardinals, we are forced to the conviction that when once he had perceived the trend of the revolution he had set in motion, he regarded it with horror and aversion. Even the best historians of that time, however, like Mr. Bolton King in his 'History of Italian Unity,' and more recently Mr. R. M. Johnston in his 'Roman Theocracy and the Republic,' deem it necessary to devote many pages to emphasizing the constitutional weakness of Pius and the malign power of the Jesuits, in order that the sudden transformation of a liberal into a reactionary Pope may seem less startling and violent.

But, in the sense of this term as commonly understood, Mastai-Ferretti was never a liberal at all. All through the discussions of his period there runs the same old fallacy of the ambiguous middle term, a source of error as continuous and insistent as if the Stagirite had never given his formal logic to the world. What do you mean by liberal? From the point of view of the Gregorian Curia, Cardinal Mastai was a liberal because he could see no harm in railroads, illuminating gas, and scientific conventions; and because he was horrified at the excesses committed by the Centurioni in Romagna. But he never made the first step towards the liberalism of Cobden and Bright, although, not unnaturally, the world was deceived into supposing that he was in full cry after them. One circumstance of the utmost importance,

which Masi says he has never seen mentioned in but one history, and that one but little known, is that, whereas on the 16th of July, 1846, Pius proclaimed amnesty and pardon to all political prisoners, on the 18th of the same month he gave prizes and decorations to those who had distinguished themselves in putting down the liberal uprising at Rimini in 1845. As our author well puts it, Cardinal Mastai-Ferretti, the liberal of long standing, is a fiction on the one hand of the revolutionary partisans of his early papacy, who intended it as praise, and on the other of the Gregorian Sanfedists and Centurions, who intended it as a calumny.

The last half of Masi's volume contains, among others, essays on "Count Cavour and Italian Unity," and on "Newspapers and Contemporary History." But I must pause here. H. EDMISTON.

MLLE. DE L'ESPINASSE.

PARIS, November 11, 1905.

The relations of Madame du Deffand and of Mlle. de Lespinasse have been for a century an unfailing source of interest and a subject of discussion. Madame du Deffand has been severely blamed by many, and absolved only by a few. If we turn to her correspondence, we find proof that she engaged the services of Mlle. de Lespinasse on very definite terms, which were not adhered to by the latter. We know, besides, but only recently, the revelations made by M. de Ségur, that Mlle. de Lespinasse was the illegitimate child of a brother of Madame du Deffand, to whom she owed everything.

M. de Ségur has taken the subject again in hand, and has published several articles on it which will soon appear in a volume. He begins at the time when the rupture took place; when Madame du Deffand was justly angered, in our opinion, on finding that her protégée was slyly taking advantage of her blindness to draw away from her all her best friends and to make a salon in her own house. When Mlle. de Lespinasse was turned out (we can use no other expression) of the house of Madame du Deffand, she immediately started her rival salon in the near neighborhood of her protectress, and opened, in the language of a contemporary, a "boutique de bel esprit." We may judge of the difference of times by the price she paid for two stories in a house in the Rue St. Dominique—950 livres, besides 42 livres for the porter. It was, however, a considerable sum for her, as she had in all an income of but 3,592 livres. Her friends helped her to get some furniture—Hénault, Turgot, Madame de Châtillon, the Maréchale de Luxembourg, Madame Geoffrin. The last, who hated Madame du Deffand, her "bête noire," procured for her a pension, which was paid to her through Joseph de la Borde, the wealthy banker. M. de Ségur calculates that, thanks to the liberality of her friends, she had about 8,500 livres a year to spend.

She had hardly entered her new apartment when she fell ill with the smallpox. She was for a moment in peril, and David Hume wrote to his friend Madame de Boufflers: "Mlle. de Lespinasse is dangerously ill with the smallpox. I am happy to see that D'Alembert, in these circumstances, forgets his philosophy." The great mathematician took incessant care of her; he fatigued himself so much that he fell ill with a putrid fever, from which he was long in recovering. Julie de Lespinasse took care of him in her turn, and Marmontel wrote: "Whatever people may think or say, she constituted herself his nurse. Nobody thought or said anything but what was right about it." She persuaded him to take rooms in the upper part of her house, and from that moment, in the autumn of 1765, we find him comfortably settled in the house in the Rue St. Dominique, taking his meals with the person who for many years had held possession of his heart. Julie de Lespinasse said in a letter: "Nothing is of any importance when you are thirty years old and marked with the smallpox."

D'Alembert suffered with less patience the allusions and pleasantries of the world; he wrote to Voltaire: "I apprehend who has written you this impertinence [meaning Madame du Deffand]. It is better that people should write to you that I am in love than more atrocious falsehoods, of which they are entirely capable. They wished to make me ridiculous, but ridicule does not hurt me much." It was perfectly well understood after a time that the relation between D'Alembert and Julie de Lespinasse was purely platonic. Their communion was complete.

"They consult each other," says M. de Ségur, "about everything, and never act except in unison. All the affairs in which Julie is interested come under the eyes of D'Alembert, and are managed by him with jealous devotion; he receives her interest and invests her savings. Almost always, at least during the first years, they visit together; nobody thinks of inviting one without the other. When her eyes ache, which is only too often, she uses the hand of this sure confidant, and dictates from her bed, even sometimes from her bathroom."

M. J. Bertrand, the mathematician, points out in his 'D'Alembert' the importance of this collaboration.

Julie de Lespinasse was soon admitted to the famous Monday and Wednesday dinners of Madame Geoffrin, the "mother of the Philosophers," and became one of the principal stars at those reunions. She made friendships with Condorcet, Suard, the Chevalier de Chastellux, the Countess de Boufflers ("the idol of the Temple," as she was called, since her lover, the Prince de Conti, lived in the Temple), Madame de Châtillon, Hume. She was mixed up in the great quarrel between Hume and Rousseau, the details of which convulsed the whole society of Paris. She knew many foreigners of distinction, the Abbé Galiani, Creutz, Gleichen, the Marquis of Mora. Regarding the last personage, who inspired a violent passion in Julie de Lespinasse, M. de Ségur obtained unpublished documents from the Duchess de Villa-Hermosa, who inherited his papers. He belonged to the old and illustrious family of the Pignatelli of Aragon. Mora was only twelve years old when he received a brevet of officer in the Spanish army. He was married to a daughter of the Count of Aranda. The young woman died in 1764, after having given birth to two children. Mora was a widower at the age of twenty. He came to Paris and was attached to the Spanish Embassy. He made the acquaintance of Julie de Lespinasse in November, 1766; she paints his portrait in a letter to D'Holbach in these terms: "I must speak to you of what affects me at this moment, a new acquaintance of whom my head is full, and I would say my heart too, if you did not deny me a heart. . . . A face full of goodness and of *agrément*, which inspires confidence and friendship—a mild character, etc." She becomes very lyrical as she proceeds, and seems to have felt what the novelists call "le coup de foudre."

Mora was very shortly after recalled to Spain, where his parents offered him a second marriage with a Pignatelli, rich, handsome, a cousin of the Fuentés, He refused this tempting offer, intending to remain free. There is no evidence that he thought of Julie de Lespinasse at that time. After an absence of twenty months he returned to Paris; he was ill, and bore the germs of tuberculosis. When he found Julie de Lespinasse he fell in love with her, and she returned his affection with the most ardent passion. After a whole winter and the spring of 1768, Mora was obliged to return to Spain, but he would first pay a visit to Voltaire at Ferney, and he took with him a letter of introduction from D'Alembert. "His adieux to Julie were sad," writes M. de Ségur; "each of them knew that he was loved, each kept secretly the promise of absolute fidelity, each felt assured of a near meeting, even if the young colonel had to abandon his career." Mora seems, from that moment, to have entered into a formal engagement.

He did not remain long in Spain, but took advantage of the first opportunity to return to Paris. His sister was to be married to the Duke of Villa-Hermosa, who was detained in Paris by his functions at the Spanish Embassy. Mora conducted his sister to Paris; the marriage was celebrated in great pomp and lasted eighteen days. Mora and Julie de Lespinasse entered into the "lumincus phase" of their life, to use an expression of M. de Ségur's. Julie de Lespinasse wrote, several years after, to Guibert that Mora "alone had made her know what happiness was," that "he had taught her for a few moments all the worth that life can have." "I was beloved to a degree to which imagination cannot rise. All I had read before was feeble and cold in comparison with M. de Mora's sentiments." She spoke to all her friends of her own sentiments, and did not try to conceal them; she saw familiarly the relatives of Mora, with the exception of his sister, the Duchess of Villa-Hermosa. This exception was probably due to the fact that the Duchess did not consider Julie's passion for her brother purely platonic. M. de Ségur, however, is of opinion that it was, and draws some arguments from the correspondence which Mlle. de Lespinasse had with M. de Guibert, the man who, after the death of Mora, became her recognized lover. I confess that these letters have not made on me the impression they did on M. de Ségur. "It seems to me," she writes to M. de Guibert, "that I was uselessly *honnête* till I knew you. Never mind what I have been. I know that I have failed, that I have been untrue to virtue, to myself, and have lost my own esteem." And in another place: "I have become despicable only because I have loved you; you have doubted of my heart only because I have given it to you; and you have ceased to esteem me only because I have sacrificed my virtue for you."

Marmontel speaks in his memoirs of the relations between Julie de Lespinasse and Mora, and insinuates that she played the comedy of love in order to be married to him; a younger brother of Mora afterwards told Madame Guibert that "they were engaged, and that the marriage would have taken place but for the infidelity of Mlle. de Lespinasse, followed by the death of my brother." It seems clear that Mora's family was afraid of the marriage. He received an order to join his regiment in Catalonia, and on his return to Spain was appointed General at the early age of twenty-two. He was ill; the doctors sent him to Valencia; his malady progressed rapidly; he suddenly took a resolution to go to Paris, and made the journey without stopping anywhere. He fell so ill that the doctors sent him to Bagnères, and he set out on the 7th of August, 1772. Julie de Lespinasse was to see him no more.

If Mora had been the only passion of Julie de Lespinasse, she would be a more interesting figure among the "grandes amoureuses"; but there is a second chapter in her history which follows the first in alarming proximity. She met, at the home of Watelet, a financier, a friend of D'Alembert, namely, M. de Guibert, a young colonel, a man of fashion, who was also a writer. She saw him for the first time on the 21st of June, 1772. Mora at this date was convalescent, and seemed out of danger. There was much talk at the time of a new book of Guibert's, 'General Essay on Tactics.' Julie de Lespinasse was of an enthusiastic turn of mind. "I have made the acquaintance of M. de Guibert," she writes to Condorcet; "he pleases me much; he has force and elevation; he resembles nobody." After Mora's departure, Guibert and Julie became more and more intimate; the story of their relations may be summarized in the headings of M. de Ségur's two closing chapters: "The Fault," "The Expiation." The absence of Mora, his painful malady, and finally his death, throw a dark veil over the new passion of Julie de Lespinasse. The eloquence of some of her love letters do not diminish the repulsion which must be felt for her character. Guibert was light, she was jealous, and suffered all the tortures of wounded affection. She died, after a painful illness, on the 22d of May, 1776. D'Alembert, her faithful friend, put her papers in order, and fell on the manuscript in which she told almost day by day the story of her love for Mora. Among the letters which he was charged to destroy, he did not find a single one from himself. He stood in the lowest rank of her affections, after "ten or twelve others," so he wrote to Guibert; adding that he had lost "sixteen years of his life" in her company.

Correspondence.

GLADSTONE AND THE CONFEDERATE COTTON LOAN.

To the Editor of The Nation:

Sir: I see that the charge against Mr. Gladstone of subscribing to the Confederate Cotton Loan is being revived. Mr. Gladstone most positively denied that charge, declaring that "it was not only untrue, but so entirely devoid of support in any imaginable incident of the case that he was hardly able to ascribe it to mere error, and was painfully perplexed as to the motives which could have prompted so mischievous a forgery." To revive the charge, therefore, is to assert that Gladstone deliberately lied.

Can any facts corroborative of the charge be produced? Is there anything to show that Mr. Gladstone directed the purchase of the stock to be made, or knew that it had been made for him and accepted it? That, like many good friends of the Republic, he doubted the policy of re-annexing the South, deeming union with Canada a wiser course, or that he did not think it clear that damages were due for the depredations of Confederate cruisers, will hardly be considered proof, even presumptive, of his having held Confederate stock.

The motive for the forgery I suppose was obvious enough.—Yours faithfully,

Goldwin Smith.

Toronto, November 28, 1905.

THE INTELLIGENT VOTER.

To the Editor of The Nation:

Sir: As an illustration of how our admirable system of universal suffrage works, let me relate what lately came to my notice.

In the recent election for mayor in Chicago the question largely turned on municipal ownership of street-car lines. The candidate who seemed mostly heartily in favor of the proposition was elected. The next morning a considerable number of lawful voters boarded street cars under the impression that thenceforth no fares need be paid, as all existing franchises and legal rights had been wiped out overnight. A few months later these same duly qualified voters selected judges. One of the candidates for the bench probably gauged correctly the intelligence of some of these duly qualified legal voters when he publicly promised that, if elected, he would issue no more injunctions under any circumstances.

The marvellous feature of it all is that everybody knows that similar instances are occurring daily in this country, and that everybody admits that any private business conducted on the principles of universal suffrage would go to smash within a week. And if such a private business were thus conducted and went to smash, every sane American could put his finger on the weak spot at once—in a private business, but not in public business.

This keenness and accuracy of the man in the street in reasoning about private business, coupled with his inability to reason sanely about public business, is the most curious psychological phenomenon in this country to-day. Our great-grandchildren will undoubtedly have some very interesting chapters to read when the future historian comes to treat of the present political obsessions of the people of the United States.

M.

THE NATIONAL DRAMA AND UNIVERSITY TOWNS.

To the Editor of The Nation:

Sir: In the much talking of late about the need of an endowed theatre for the encouragement of the higher drama, no mention has been made of one aspect of the question that is of special importance—the dearth of legitimate drama of any kind in our small university towns. And yet these communities, with their representation from different parts of the country of the student class, offer splendid opportunities for the adequate performance of standard plays This has always been recognized in Germany, where special rates are given to students, but to our American managers a university town is simply a "one-night stand" of so many thousand inhabitants, and, as a rule, the cheapest performances are considered good enough for it.

No branch of English work has shown more marked advance in recent years than the study of the drama. Not only the classical works of the sixteenth and seventeenth centuries are studied in all our larger institutions, but increased attention is being paid to the contemporary drama; and what is true of English is true in no less degree of French and German. In many cases, courses in the foreign drama are offered in English. Further proof of the active interest in the drama as a distinctive literary type is shown by the number of revivals of early English plays at different places.

Whether or not we are to realize the ideal of a national theatre, with annual provincial tours for the further spread of dramatic light, it is not unreasonable to hope that some of our leading managers may be induced to consider the claims of the university towns, thus providing the laboratory work in the drama that is essential to its proper study. A university population of three thousand ought to be able to satisfy the demands of the most exacting manager, and in the English department of each university will be found not one, but a dozen, advance agents, with an enthusiasm all the more convincing because of its sincerity.

Daniel Kilham Dodge.

University of Illinois.

Notes.

Dodd, Mead & Co. will publish directly 'My Life: A Record of Events and Opinions,' by Alfred Russel Wallace.

Among the newer attractive reprints are Charles Lever's 'Charles O'Malley' and 'The Confessions of Harry Lorrequer,' both sightly volumes in emerald green, with Phiz's illustrations reproduced (Macmillan). The letterpress is condensed, but clear. More ornate, in dark green and gold covers, proceeding from the same firm, is Thackeray's 'Henry Esmond,' with an introduction by Austin Dobson and illustrations by Hugh Thomson. The work of these associates needs no fresh appraisal for the public that buys and enjoys books. Mr. Dobson discusses briefly the impeccability of Thackeray's Queen Anne English. His reference to Lowell's criticism of it is not quite exact. It was, we think, the construction "different *to*" which was held anachronistic. Trollope's Autobiography is neatly reissued in handy form by Dodd, Mead & Co., with an etched portrait of the novelist.

Very tempting externally are the five flexibly bound volumes for the side pocket of George Borrow's "Bible in Spain,' 'The Zincali,' 'Lavengro,' 'The Romany Rye,'

and 'Wild Wales.' The paper is thinnish and the impression sometimes a little faint, but not to repel. The frontispieces include Borrow's portrait and some characteristic scenery of the several countries.

The "Red Letter Library" of H. M. Caldwell & Co., Boston, adds 'Stories by William Carleton,' and Bacon's 'Essays,' each portraited and prettily made. A smaller series with the same imprint and some daintinesses of its own gives us Daudet's 'L'Arlésienne' and Chamisso's 'Peter Schlemihl' in English.

Fourteen years ago Prof. William K. Brooks made a rational appeal to Marylanders on the subject of oyster culture, in the hope of reviving a decaying and contentious industry. His tract, 'The Oyster: A Popular Summary of a Scientific Study' (Baltimore: Johns Hopkins Press), failed, as he sorrowfully admits in his preface to a second and revised edition, to penetrate the ignorant conservatism of a State ruled hitherto by Gorman. However, in returning to the fray, he adds a chapter on the peril of the oyster as a vehicle of collection for cholera and typhoid germs, and perhaps this aspect will do something to help the economic reform.

The Vassar Brothers' Institute (Poughkeepsie, N. Y.) has reprinted in facsimile the Debates and Proceedings of the convention of New York on the Federal Constitution. The form and style of types are those used in the original issue of 1788, and the paper is of a brown tint, to counterfeit the effect of time. So far as the mechanical effects are concerned, the pamphlet could not be improved. But in such a matter much more is required to make it really useful. The position of New York was of such importance, so much depended upon its decision and so able were the discussions aroused by the proposed form of government, that the convention itself was only a small part of the contest. The newspaper controversies called out some of the best writers and statesmen, and the Institute would have performed a worthy task in collecting these discussions and in bringing together the many letters of those who were engaged in the fight, and who measured and expressed the views of the different factions. What McMaster and Stone did for Pennsylvania should be done for New York, Massachusetts, and Virginia; not until then can the real history of the adoption of the Constitution be seized. As a reissue of a somewhat rare pamphlet, and as a contribution to the history of the Constitution, this reprint has its uses.

The feeling of surprise awakened by the general appearance of a volume entitled 'Tour of the Interparliamentary Union,' through the United States in 1904, is not diminished when it is seen to be an issue of the Government Printing-Office. Mr. Samuel J. Barrows is responsible for the compilation; there is no mention of the body or department responsible for the publication. As a subscription work, it might have had a large sale in the country districts; but as a serious production it is much below what might have been expected, and it is to be condemned on the score of good taste. The dignity of the Congress will be expressed in the Proceedings of the meetings of the Union; nothing is added to that dignity by this lengthy account of the rapid journey across the continent, plentifully padded with portraits of the guides and accompanying officials, the pictures of streets and buildings in various cities, and the trivial illustrations of "A Jolly Ride," "Ten Minutes at Topeka," or "Mr. Bartholdt backed by Niagara." The mere cost of printing such a volume, at an office where waste is notorious, is of public interest, for it represents an abuse in the appliion of the public money that has become so great as to call for drastic reform. No good excuse for the publication can be given; and the issue of such books as this and Michael's 'Declaration of Independence' brings discredit upon the Government publications, and hinders the appropriation of money for really useful and scholarly works.

Sixty-three colored reproductions of paintings made in southern Spain, Morocco, Algeria, and Tunis, divers small drawings in black and white, and a text consisting of lucubrations on the Spanish and Moorish races, religions, histories, and destinies make up 'In the Track of the Moors,' by Sybil Fitzgerald (E. P. Dutton & Co.). The illustrations are by Augustine Fitzgerald. These two parts have only a geographical connection. The pictures, much the more satisfactory element, are often charming, although also at times very trivial in subject. Mr. Fitzgerald appears to have shrunk from attempting to render broad vistas, and to have felt his strength in corners of interiors and even collections of plants in gaudy pots. The accompanying pages contain some happy scraps on present-day Spain, showing real insight and appreciation. But in great part they are unsatisfactory meditations on Spaniards, Moors, gypsies, Berbers, their fates, types, and futures, their art, architecture, literature and sciences, their effects on one another and of the desert upon them—the problem, in fact, of East and West. There is much therein of interest and undoubted power of æsthetic and psychological discernment, but the basis of absolute fact is too much of the kind furnished by Sir Richard Burton and his like—reconstructions rather than history.

'Metrical Rhythm,' by T. S. Omond (Tunbridge Wells, Eng.: R. Pelton), a small pamphlet of 27 pages, is a criticism of William Thomson's 'Basis of English Rhythm,' reviewed in No. 2091 of the *Nation*. Its generalized flavor of approbation is liberally seasoned with particularized dissent. Embedded in it are not a few originalities, expressed in Mr. Omond's forcefully gentle manner of mild fairness. The most modest brochure is worth attention when it contains expressions such as: "In unfamiliar measures, syllables and time-beats must correspond closely, else we fail to catch the swing; in familiar ones there is no such necessity. It is a crude view of verse which supposes that word-accents must always synchronize with rhythm-accents, or syllables with time-beats." Or, "It cannot be too often repeated that in prosody we start from no fixed rules. We start with a large body of practice, the work of our best poets. We examine this, trying to discover the principles on which they worked. . . . If we can discover and truly state such principles, they may fairly be called laws of verse. . . . But if, after formulating a law, we find it habitually infringed by our best poets, no middle course is open. We must withdraw our formula, confess it erroneous, probably because modified by some other principle which we have omitted to take into account. If we are slow to do this for ourselves, others will do it for us."

We add to the series of Tamil textbooks already noticed in these columns the reprint of the Rev. Dr. G. U. Pope's 'Catechism of Tamil Grammar,' No. II. Its continued use for fifty years has proved its practical value as a manual of instruction. The 'Catechism' is intended to accompany the same author's 'Handbook' (Oxford: Clarendon Press; New York: H. Frowde).

The Fifth Financial and Economical Annual of Japan, 1905, issued by the Department of Finance, and excellently printed at the Government Printing-Office in Tokio, is unusually rich in maps and diagrams ingeniously constructed and neatly colored. On a sheet 30x20 inches, representing the Japanese and adjoining Russian and Chinese Empires, we see at a glance the public and private railways, both proposed or completed, the routes of the steamship lines and the national boundaries. At the end is a folder giving a synoptical statement respecting the assignment of official business under the control of the Minister of Finance, with the details of executive, accountant, revenue and finance bureaus, and also of customhouses, revenue inspection, and the monopolies of tobacco, camphor, salt, coinage, and experimental brewery. Ten full-page plates of colored diagrams show the relative proportion of revenue and expenditure, the national debt, and sources of revenue for the extraordinary expenses connected with the war; these last items occupying two-thirds of the space in the circles. The various loans, extraordinary special taxes and old sources of debt are also exhibited. Parallel bars of various tinting show strikingly the commercial, agricultural, manufacturing, and financial details of revenue and progress. There is a table of weights, measures and coins, with English and French equivalents. The text and tables, covering more than 200 pages, will richly reward the student of finance and economics. With Russia, Japan's late belligerent, trade relations have always been very slight. Despite warlike operations, the uninterrupted victories of Japan's naval forces, giving them control of the sea, changed the disastrous depression at the beginning of 1904 to unprecedentedly good results in Japan's foreign trade, especially with China and Korea, the increase in exports being over 10 per cent. and the imports about 17 per cent. Manufactured articles showed the greatest increase; silk alone to the amount of over $11,000,000, as compared with the preceding year, being exported. The unusually large amount of raw material imported in preparation for the war, and the large purchase from abroad of petroleum and sugar, in anticipation of the imposition of a consumption tax on those articles, explain the excess of imports. The historical and descriptive notes on the banking system, coinage, shipping and navigation are all eloquent of Japan's progress, founded as it is on sound economic principles and national industry.

The Swedish explorer, Sven Hedin, without any preliminary announcement of his intentions, has started on a second expedition to Tibet and India. In this case

his purpose is chiefly to investigate the headwaters of the Indus and the Bramaputra, also the great lake districts in Central Tibet. The total cost of the expedition will be at least 100,000 crowns, and this has been secured from King Oscar, a number of prominent merchants in Stockholm, and especially from the Dickson family in that city. The purposes of the journey are, however, not merely hydrographic, but also geological, meteorological and ethnographical. The English authorities in India have been instructed by the home authorities to aid the savant, and the King of Sweden has written to the Shah for safe conduct through the dangerous deserts of Eastern Persia. It is expected that fully a year and a half will be devoted to the work in hand, so that Hedin will again risk the rigors of a Tibetan winter in the interest of scientific research.

Dr. Walter von Knebel has just returned to Berlin from a four months' journey devoted to the investigation of the geology of Iceland, especially of the volcanoes, active and extinct. Notwithstanding the exceptionally inclement weather during the past summer in Iceland, his preliminary reports in the Berlin journals show that his investigations were very fruitful. Among other things, he has been able to prove various ice ages for Iceland. How disagreeable his journey was may be judged from the fact that on the 25th of July he was overtaken by a severe frost, and, with the temperature below freezing, was compelled to camp in the open. Dr. von Knebel brought with him a large number of photographs and some aquarelle sketches made by himself. The full reports of his researches will appear in the near future through the Stuttgart house of E. Schweizerbart.

The next great Arctic discovery, accordingt to Sir Clements Markham, in an address before the Royal Geographical Society, is in what is termed the Beaufort Sea, that part of the Arctic Ocean to the north of Alaska. The problem to be solved is whether it is part of the deep polar ocean or the continental shelf which borders it. In the latter case the existence of islands is more than probable. Sir Clements advocates the sending out of an expedition in the *Discovery*, the ship which did such good work in Antarctica, to be stationed for two winters at the mouth of the Mackenzie or on Melville Island, with a sufficient complement of men for three extended sledge and three depot parties. Their object should be to explore this unknown section of the continental shelf over the Beaufort Sea, as far as the edge of the Polar Ocean. Admiral Markham, in heartily commending the plan, called attention to the fact that it is thirty years since the last English Arctic expedition.

The latest development of the educational awakening in England is the proposal to establish an Oriental School in London. In four of the universities, instruction in the Indian vernaculars is given to candidates for the civil service, but no provision is made to meet the needs of the merchant, the barrister, the physician, or the engineer going out to the East. The case is very different in Germany, France, and Russia. In Berlin the Orientalisches Seminar, with an annual grant of $40,000, has the necessary buildings, a fine library, an admirably conducted journal and 228 regular and special students. The École Spéciale des Langues Orientales Vivantes in Paris has an income nearly as great, publishes a journal and a series of text-books, and has a well-selected library. But Oriental study is most fostered in St. Petersburg, being the fourth faculty at the University, with 27 professors and teachers of Eastern languages. An auxiliary college has been established at Vladivostok. The failure in Great Britain to meet the demands of its own empire is shown in the fact that, out of the 150 ancient and modern languages of India, there are professed teachers of only nine in the universities.

A correspondent writes from Paris: "Apropos of a statement at page 341 of the *Nation* for October 26, the Nobel peace prize has *always* been awarded by Norway, and the literature and science prizes *always* by Sweden. In fact, during the recent discussions between the two countries concerning the razing of the frontier fortresses on the Norwegian side of the border, Sweden twitted Norway with awarding the peace prize, and yet standing out for the preservation of these forts."

—The December *Harper's* opens with an account of the sack of Carthagena by M. de Pointis and his forces, in 1697, text and illustrations both by Howard Pyle. Edmund Gosse contributes a study of the epigrams of the early seventeenth century, necessarily barren, since an epigram to be successful must possess just what it cannot possibly receive from a period whose ear was "curiously little affected by neatness of finish and sharpness of sound." Professor Lounsbury pursues the question of authority in the use of English still further, considering in this number the linguistic authority of great writers. If people generally were in the habit of acquiring their morals from their magazine fiction, one might object strongly to Mary R. S. Andrews's story of "The Diamond Brooches," the natural effect of which is to make the reader feel like excusing such a little matter as the theft of five thousand dollars' worth of diamonds, when the ultimate object is a trip to Florida in order to restore the health of a sick mother. Ex-President Cleveland writes on the integrity of the American character, rebuking the lapses now most in evidence with his usual force, but maintaining that the wounds which they have inflicted on our social and political life are not at all beyond hope of cure.

—Aside from its fiction, the Christmas *Scribner's* is marked chiefly by studies of Holbein and Bouguereau, contributed by Kenyon Cox and Frank Fowler, respectively. Of Holbein's portraits of the English period, Mr. Cox says: "The ablest painter out of Italy has deliberately set back the clock, and has reduced the art of painting, which he has been at so much pains to master, almost to the condition of mediæval illumination." The explanation, we are told, is to be found in the demands of his royal patron, Henry VIII. The taste of the court had been formed by certain Flemish miniaturists, and this unfortunate condition Holbein was powerless to alter. But, "even with his hands tied, he could still paint better than any one else." The art that conceals art, the skill that hides itself in its result, the mysterious perfection of surface, the inevitableness of the Greek gem seen in each composition—these are among the qualities that make him "one of the greatest—in some ways *the* greatest—of portrait painters." With Bouguereau, Mr. Fowler's aim is to show just why a seat among the greatest cannot be assigned to one who in evenness of performance, in entire mastery of himself and his technique throughout his career, has not his equal in the whole range of painting. Mr. Fowler is inclined to accept the theory often maintained in the field of literature, that too facile a mode of expression tends to beget paucity of thought. The artist's "fixed and stereotyped suavity of touch for all subjects and all textures" leads one to feel that "nowhere has this painter been stirred by one subject more than by another"; but truly great art comes only with deep feeling.

—Anybody interested in the theatre will find two articles of value in the *Atlantic*—an appreciation of Sir Henry Irving, by Talcott Williams, and a discussion of the question whether the theatre is worth while, by James S. Metcalfe. The answer to this question is, that the theatre might be made distinctly better worth the while if people were not so ready to patronize it entirely regardless of its desert. Bad entertainments are supported about as well as the good, and it requires much less brains and effort to provide them. "A judicious denial to it of the favors which have pampered it into an exaggerated idea of its importance in our lives, would be the best thing that could happen to the theatre to-day." Sir Henry Irving, Mr. Williams tells us, started with audiences educated in the conception of an actor as a man of physical presence and comeliness, given to the sonorous recitation of effective speeches, and by long effort taught them that the highest work of an actor is intellectual interpretation, not elocution and gesture. Through his work the time when people thought of a play as "a series of dramatic situations in which some one gifted actor, or at most an actor and an actress joined to him, presented characters conceived, acted, and admired, apart from their setting," is gone never to return. Prof. Kuno Francke writes of "German Ideals of To-day." The "Brotherhood of Nations" no longer appeals to the German, we are told, since he has had too many reasons to doubt the sincerity of those who talk most about humanity and the peace of the world. The word "Enlightenment," too, has no charm. Priceless as it is to the elect, it easily leads the masses to materialism and moral indifference. Freedom is good in its place, but the German Constitution already allows more of it, he thinks, than the great majority of individuals are capable of carrying. Nor will industrial progress and supremacy do, often "a fetish to which thousands of living beings are sacrificed, a cancerous growth preying upon the nation's health." Instead of any or all of these, he puts "social justice" forward as the political ideal of contemporary Germany, with social efficiency as the fundamental demand of the new education.

—Literature has certainly gained in bulk, if in nothing else, by the modern discovery that a great man's biography has never been really written, so long as there remains even one plausible point of view from which the subject has not been treated. Easy of abuse as this tendency is,

however, we must not conclude too hastily that the *Century* has not something of genuine value in its study of "Lincoln the Lawyer," begun by Mr. Frederick Trevor Hill in the December issue. Mr. Hill's aim is to show the bearing of Lincoln's legal training and practice on his later career as a statesman. He admits that his legal career is without any antecedent explanation, since the only legal talent in the Lincoln family for generations back belonged wholly to a collateral branch. It may be the final conclusion that Lincoln's achievements are to be explained fully as much from the negative as from the positive elements involved. Positive advantages are good in their way, but, granting the right type of character to start with, there is no better sharpener of human wit than the necessity of securing ends without special advantages. Mr. Hill contemptuously discards that traditional copy of "the Revised Statutes of Indiana" as the immediate source of young Lincoln's legal aspirations, putting in its place the Boonville court, a fine example of our early Western judiciary in its fascinating excitement, its easy unconventionality, and its earnest and effective, if unpolished, oratory. Florence Brooks contributes a very interesting account of Paul Orleneff and his company of Russian players, who came to New York for the spring season, and have been so far successful as to warrant a more systematic campaign for the present season. Half-tones of Orleneff and Madame Nasimoff accompany the paper. Those who read Frank M. Chapman's account of "A Flamingo City," a year ago, will be pleased to find an equally intimate study of the Pelican in this issue, from material gathered at the noted pelican breeding place on Indian River, Florida. The brown pelican is, of course, referred to, since not even Mr. Chapman has as yet succeeded in breaking through the seclusiveness of the white variety.

—In the December *Popular Science Monthly*, Prof. John J. Stevenson again takes up the question of the status of American college professors, maintaining that the present tendency to subordinate them to the trustees and to the president is contrary to the real interests of educational progress. The trustees are successful men of business or professional life for the most part, with neither the time nor the expert knowledge necessary to administer wisely the internal affairs of an institution of learning. The president, once a good professor as well, must now be a successful business manager and money-getter, teaching little if at all, and, like the trustees, possessing neither the time nor the knowledge requisite to the sagacious exercise of the powers which are generally either sought by him or thrust into his hands under existing conditions. The trustees, then, should confine themselves strictly to the management of the property and the task of securing funds for the carrying out of such educational policies as the teaching force may advise. Even in filling vacancies in their own number, their action, he is inclined to think, should be subject to veto by two-thirds of the full professors. Vacancies in the faculty should be filled by the faculty itself, subject to confirmation of the trustees merely *pro forma*, or to rejection in case there are not funds available for the required salary. The presidency should be abolished altogether, each faculty selecting its own executive head, who should be simply *primus inter pares*, and the mouthpiece of the faculty in its relations with the trustees. It is noticeable that the editor of the *Monthly*, in a paragraph relating to the recent conference of college and university trustees held at the installation of the president of the University of Illinois, questions the theory that the recent rapid growth in the material endowment of colleges is the work of the presidency, and also suggests that, even if were, institutions are not always such centres of education, scholarship and research as their liberal endowments would lead one to suppose. It is only the great teacher and investigator, after all, who can impart anything but mere material greatness to an institution of learning.

—"Bibliography in Canada" is the title of a short paper contributed to the October number of *the Library*, by Mr. Laurence J. Burpee of Ottawa, in which he gives a varied survey of the bibliographical records of Canadian literature. The most important of these are M. Philéas Gagnon's 'Essai de Bibliographie Canadienne,' a catalogue of the compiler's own library; Dr. Henry J. Morgan's 'Bibliotheca Canadensis,' of which a new edition is in preparation, and Mr. W. R. Haight's 'Catalogue of Books, 1791-1895,' with its annual supplements, of which, however, only two have been published, the one for 1897 not until this year! As a specimen of what an annual Canadian book catalogue should be, Mr. Burpee himself prepared one for 1901 for the Royal Society of Canada. The Transactions of that society contain not a little bibliographical material of value, such as the several lists of the yearly output in the subjects covered by its various sections, and an exhaustive bibliography of the publications of its members, in 1894, prepared by the late Sir J. Bourinot.

—The same number contains a short account of the meeting of the Library Association in Cambridge, by Mr. John Ballinger. Twenty-three years have lapsed since the previous meeeting there under the presidency of the late Henry Bradshaw. His successor as university librarian, Dr. Jenkinson, presided over this year's meeting, which had especial local significance, owing to the double half-century jubilee of the Cambridge Public Library and its librarian, Mr. John Pink. The most important matter before the Association was the report which was presented by Mr. Tedder, on behalf of the Committee on Public Education and Public Libraries. The report took the form of a series of resolutions which were adopted by the Association, with the addition of two paragraphs, proposed by Dr. Hill, the Master of Downing and President of the Home Reading Union. The resolutions as adopted contained such recommendations as, "that the public librarian should keep in touch with the chief educational work in his area; that conferences between teachers and librarians should be held from time to time; that there should be some interchange of representation between the Library and Education Committees."

—As an authority on Charles Lamb, M. Jules Derocquigny of the University of Lille caught our attention some time ago by his able though brief contributions to the new *Revue Germanique*. We now observe that he is responsible for an original study of real magnitude (pp. 415), entitled 'Charles Lamb, sa Vie et ses Œuvres' (in the new series of "Travaux et Mémoires de l'Université de Lille," 1904), which has gained him from the French Academy a share of the Prix Marcelin Guérin, and which must be adjudged a commanding position henceforth among critical interpretations of "Elia" and his period. It belongs, in fact, in the same high class as a number of other monographs on English men of letters produced within recent years in the universities of France, and testifying to the abundant success of scientific methods as there applied to problems of modern literature. In solidity, vigor, interest, and grace, and for the most part in sureness of touch, it is hardly surpassed even by a masterpiece like M. Legouis's 'La Jeunesse de William Wordsworth,' which it resembles in being a thorough and scholarly research moulded into the form of a popular introduction, and in having for its subject a foreign author presumably little known to the French laity. In France, we remark, the learned seem to regard popularization of scholarship as a function that concerns the social welfare; at all events, they do not relinquish it entirely to their second-hand dealers and dilettanteish literary jobbers, nor is their sense of responsibility satisfied by the preparation of annotated editions of an author's works. Accordingly, M. Derocquigny's book is in its way a nobler effort than either of the fine editions of Lamb, by Mr. Lucas and Mr. Macdonald, which are still agitating the reviewers here and abroad; and it represents perhaps an amount of labor equivalent to that of any commentator.

—Apparently M. Derocquigny has read everything available on Lamb, and he knows his Coleridge and his Wordsworth well. If he is a little less accurate in detail, and decidedly less careful about giving his references, than M. Legouis in the work mentioned above, that is rather to the credit of M. Legouis. M. Derocquigny's slips after all weigh light in the balance. On page 31 and elsewhere he adopts Lamb's spelling "Bowyer,' instead of the preferable *Boyer*. An English proofreader might have saved the book a good many petty disfigurements, such as "Soulb Sea" on page 40. The absence of an index, a similar indication of French origin, is a much more serious drawback to the use of the book. An occasional gratuitous inference, wholly unsupported by external authority, is likewise not uncharacteristic. Thus, on page 77, we learn that on Lamb's visit at Stowey in the summer of 1797, "Coleridge n'avait sans doute d'oreilles que pour Wordsworth, ne parlait que pour lui," and that "Wordsworth, dans son orgueil naïf, prenait son rôle de grand homme très au sérieux." Without some objective proof of this we remain *not* "sans doute" before so unsympathetic a picture. The positive merits of an important work like this would require an extended rehearsal. In every sentence M. Derocquigny has something to say. His estimate of Lamb ought to attract the most languid reader. Let us hope that his book will be translated into English as happily as M. Legouis's has been, with the illustra-

tive passages from Lamb, Coleridge, Bowles, and the rest restored to their original form—in spite of all, they look a trifle odd in French—and with an adequate index.

THE CONSTITUTIONAL LAW OF ENGLAND.

The Constitutional Law of England., By Edward W. Ridges. London: Stevens & Sons; Boston: Little, Brown & Co. 1905. Pp. xxxii., 459.

This book, if it had appeared some twenty-five years ago, before Anson and other writers had emphasized the vital difference between the law and the conventions of the British Constitution, would have been a noteworthy production. But in the year 1905 Mr. Ridges cannot claim to be more than at best an intelligent follower of authors of wider knowledge and considerably more speculative ability than he possesses. His book, we believe, may have a large sale; it may occasionally be useful to examiners, and will delight those examiners whose laudable ambition it is to have a little to say about every topic connected with the British Constitution. Whether to this estimable, though not very intelligent, class of persons the book will in truth be beneficial, is a question on which teachers who have seen much of examinations and of the victims thereof may entertain different opinions. A manual, however, which touches upon a large number of points belonging to, or at any rate connected with, the Constitutional law of England, suggests a few reflections which, if not novel, may still be worth making on a wellworn but inexhaustible topic.

First. No one who has not been a Cabinet Minister can conjecture what may be the actual authority of the Crown; and even a Prime Minister can form but a very doubtful guess as to what are the potential powers of an English King. That no outside observer knows how small or how great may be the real influence of an English monarch, is a doctrine insisted upon some forty years ago by Bagehot with such force that what seemed then a paradox has now become an accepted and important truism. Every year has illustrated the soundness of Bagehot's doctrine. The passing of the Crown from a Queen to a King has made a marked difference, though it is a change excessively hard to define, in the tone of public life. Whether Edward VII. exerts greater or less authority than his mother, is what no man who is not most intimately acquainted with the working of English politics can tell. The one thing which is clear is, that a habit is growing up of ascribing to the King political activity and diplomatic triumphs which no one ever dreamed of attributing to Victoria. Note, too, that this habit is fostered by the cheap press, which is supposed most accurately to represent popular sentiment. All the statements made about the King and his activity in the field of politics may be untrue, but it is the existence of this tendency to glorify the crowned head of the nation which is the phenomenon that merits notice. We see in the state of public opinion an intimation that, under conceivable circumstances, the potential authority of the Crown might unexpectedly be turned into a genuine power such as assuredly has not been exercised in England by any sovereign since the time of George III. Many of the resources at the disposal of George III. have ceased to exist, and can never be recovered by any of his descendants; but there are signs not of the probability, but of the bare possibility, that within the next fifty years the course of events may, instead of lessening, increase the strength of an English King.

Parliaments and Cabinets can never in the long run excite personal enthusiasm; allegiance must be given to a man, not to an assembly. It is the great Minister, the Pitt, the Palmerston, or the Gladstone of his day, who can, for a time at least, kindle more fervent admiration than any ordinary King. But then the King, just because his power depends upon his office, is always with us; the great Minister passes away and is forgotten. The Premier must, under the English party system, be the leader of a party; he cannot be the leader of the nation. A King may be and indeed must appear to be the head of the nation, even though he in reality be devoted to a party. Nor is there any reason why a King of sagacity should connect himself very closely with a particular body of statesmen. Add to all this, that it is the crown and not the Parliament of the United Kingdom which appears, at least, to be the representative of the Empire. In politics appearances are themselves important facts.

Secondly, The growth of Imperialism, then, whatever its other effects, adds new prestige and power to Royalty. This was an idea seized by Disraeli. His love of show and pageantry, no less than his keen insight into the weaknesses of human nature, made it far easier for him than for premiers such as Lord John Russell or Sir Robert Peel to perceive how easily the occupant of the throne might obtain the admiration and, in the long run it may be, the support of the various peoples and races who, outside England, add to the prestige, if not always to the strength, of the British Empire. The visits made by the King and his son before ascending the throne to distant parts of the royal dominions show that the Royal Family at least has learned how much loyalty may be excited by the presence of a man destined to be King. In this matter Parliament or great Parliamentarians cannot compete with the Crown. The House of Commons cannot appear as a House in India, in Canada or in Australia; and if by some strange arrangement the House of Commons were to travel bodily, say to Canada or to the Cape, it would, we all feel, excite no favor or veneration in these colonies; it would be a far less attractive and a far less impressive body than the British Association. And who can doubt that if the Prince of Wales had landed in South Africa while the most conspicuous British men of science were there assembled, the inhabitants of the country, to whatever race they belonged, would have deserted the British Association in order to catch a glimpse of the Prince?

The realization, further, of Imperialist ideas will give to an English King opportunities, of which he may likely enough avail himself, to pose as arbiter between different parts of the Empire. Nor is it at all inconceivable that a time may come when a wealthy colony, by making a grant to the Crown which was in truth and not in form only a gift to the King, might change the whole position of the Crown in relation to the Parliament of the United Kingdom. This thought, it will be said, is a wild one. So be it. It is an idea which has no reference to the practical politics of to-day. It is thrown out simply as a mode of bringing home to the minds of our readers the possibility that the so-called expansion of England, which is nothing else than the transformation of the United Kingdom into the British Empire, might produce quite incalculable changes in the position of an English King.

Thirdly. Writers who have analyzed the nature and the working of the English Constitution have paid too little attention to the special characteristics of the English civil service. The very defects of the party system bring into view all that is changeable, all that is unscientific, all which is noisy—if the expression may be allowed—in the administration of English public affairs. A premier depends for his official existence on the will of the House of Commons. Members of Parliament owe their seats to the goodwill of the electors. The parliamentary constituencies, composed for the most part of men ignorant of history, of economics, or of law, may be the victims of passion or prejudice; they may find their guides in those modern sophists, the anonymous writers in the daily press. The English scheme of government looks, in short, as if it rested upon sand. This view is far from entirely true, but it is constantly forced upon public observation. English constitutionalism, in appearance at least, ignores all claims of special capacity or of scientific knowledge. In England every man, to quote words sometimes attributed to George III., "is fit to fill any post to which he can get himself appointed." And this notion is expressed with more dignity in a well-known passage in the works of Macaulay.

"When," he writes, "parliamentary government is established, a Charles Townshend or a Windham will almost always exercise much greater influence than such men as the great Protector of England or as the founder of the Batavian commonwealth. In such a government, parliamentary talent, though quite distinct from the talents of a good executive or judicial officer, will be a chief qualification for executive and judicial office. From the Book of Dignities a curious list might be made out of Chancellors ignorant of the principles of equity, and First Lords of the Admiralty ignorant of the principles of navigation, of Colonial Ministers who could not repeat the names of the colonies, of Lords of the Treasury who did not know the difference between funded and unfunded debt, and of Secretaries of the India Board who did not know whether the Mahrattas were Mahometans or Hindoos."

This passage, too, expresses, and in a very exaggerated form, the belief that oratorical skill is the art which in England leads to parliamentary success. Nor can one forget that the oratory of the days of Macaulay and of the hundred years that preceded him was rhetoric addressed to a select body of educated English gentlemen. The orations which now bring a statesman into office, or keep him there, are addressed to the crowd. There is not a minister or any would-be minister who, in 1905, is ashamed of—to use an expression of Palmerston's—"starring it in the provinces." Sydney Smith may possibly have been mistaken in the opinion that there is no more connection between mod-

esty and merit than the fact that they each begin with the same letter. But it is assuredly true that modest merit is not the virtue which brings a man to the front and gives him authority under a system of popular government. Now the point which has not often been noticed is, that the English civil service in modern days has, with many defects, exactly the merits which do not in general distinguish parliamentary statesmen. English civil servants enjoy a secure tenure of office. They are all, or nearly all, appointed for their real or supposed merit. The best of them have from long experience and practice gained skill in the management of their special business. They are many of them men of the highest character, and in some instances of marked genius. Tradition and etiquette forbid every attempt to court popular notice. Silence, as far as the public are concerned, is in the civil service a recognized duty, and this duty is fulfilled by men several of whom are, as every one knows, most admirable speakers. Two facts are worth the most careful attention. It is under almost all circumstances deemed an act deserving of censure to attack the permanent official, who often, in reality, guides the parliamentary official who is his superior. In a book which is now attracting well-deserved notice, a son goes near to apologizing for publishing a life of his distinguished father because his father gained his distinction among the silent ranks of the civil service.

The Circumlocution Office has its defects. Red tape, though a useful article, may be used far too freely in the Government offices. But, for all this, it is the civil service of England which supplies the permanence of tenure, the consistency of action, the scientific knowledge, the devotion to work unrecognized by the public —all those virtues, in short, which would otherwise not be fostered under a parliamentary and democratic constitution.

FRESH MUSIC BOOKS.

Mr. Ffrangcon Davies's 'Singing of the Future' (John Lane) is a vigorous protest against the notion that the *bel canto*, or the true art of song, is practically a lost art. He combats the idea that *bel canto* means merely an agile, pretty voice, insisting that it really implies a complete mastery of all the vocal resources, and that Wagner, instead of being a voice-destroyer, is, properly understood, the final restorer of *bel canto* aims. His ideals and methods will be the ideals and methods of all singing of the future, not only in operas, but in song and in oratorio. When the author went to the greatest of oratorio singers, Sims Reeves, some years ago, to seek his aid in regard to the singing of "Elijah," there was "no word of thoracic, crico-thyroideal or epiglottic matters"; the first question asked was, "What do you think about the prophet—what sort of man was he?" "It was his *mind* that made him," says Mr. Davies of Sims Reeves, and the object of his book is to emphasize the rôle of the mind in singing. "The great tenor realized, *e. g.*, Samson's (a strong man's) blindness, so that when he reached his climax in the words 'Sun, moon, and stars, all dark to me,' there was a horror of darkness about his pronunciation which lives yet, somewhere, in this most laryngeal world of ours."

Mr. Davies gives many striking illustrations of how Emma Calvé, Jean de Reszke, and other great artists of our time, have anticipated the singing of the future by using their brains as well as their vocal cords. He discusses the means whereby the singer may not only reach the actor's level in distinct enunciation, but even improve upon it. He gives hints on tone production and breathing, of great value not only to singers and teachers, but to clergymen and other speakers; he shows how nervousness may be overcome, and gives useful advice in a discursive manner on nearly every phase of the art. Some of the aphorisms may be cited: "Genius will always discover its own technique." "There may be more geniuses among us than we imagine." "The texture of the voice must be slowly woven in the loom of time." "A great violinist is a great singer." "Cultivate brain, and voice will improve." "A student's aim should be to sing a word, rather than to make a tone." In this last sentence alone there is wisdom enough to atone for the author's ludicrously British ideas regarding the ultimate absorption of opera in oratorio.

"The singer who has mastered English may well laugh at him who can sing only in a simpler language like Italian." So says Mr. L. A. Russell, in his 'English Diction' (Oliver Ditson Co.); and he is quite right. His excellent little book also may be considered a contribution to the question of the singing of the future. Distinct enunciation is more and more coming to be regarded as of even greater importance than tonal beauty, and Mr. Russell shows how to acquire it in the English language. He holds that the singer's study of language should be even more thorough than the orator's; and he endorses Dr. Funk's opinion that "Pronunciation is really a work of art, one of the Fine Arts."

Mr. Gustav Kobbé contributes two tempting volumes of the lighter kind to the Christmas market. 'The Loves of the Great Composers' (Thomas Y. Crowell & Co.) includes seven chapters entitled "Mozart and his Constance," "Beethoven and his 'Immortal Beloved,'" "Mendelssohn and his Cécile," "Chopin and the Countess Potocka," "The Schumanns: Robert and Clara," "Franz Liszt and his Carolyne," "Wagner and Cosima." In collecting the material for these biographic love-stories, Mr. Kobbé has evidently been at pains to discard traditional legends and to embody the results of the latest German researches. The chapters on Liszt, Schumann, and Wagner, in particular, contain much that has not heretofore been accessible to readers of English only. In the case of his other volume, 'Wagner and his Isolde' (Dodd, Mead & Co.), Mr. Kobbé's version was made in advance of, and without any knowledge of, Mr. Ellis's translation of the letters to Frau Wesendonck. Those who wish a complete translation of the letters will get, of course, Ellis's version, while those who have time or inclination for merely the most entertaining parts, connected with explanatory remarks by the translator, will find in Mr. Kobbé's volume just what they want.

A book on the harp is quite a new thing in literature. There is one by Bruce Armstrong; but, apart from that, the only historic sketches of this venerable instrument preceding Mr. Flood's 'The Story of the Harp' (Scribners) appear to be those in the 'Britannica' and 'Grove.' The harp had its vogue before the days of much making of music-books. Its history dates back three thousand years, and there was a time in England when, apparently, every man at a banquet was expected to accompany his song on a simple harp. In our day the household harp has nearly disappeared, but at the same time it has become more and more at home in the orchestra. Mr. Flood devotes what may seem a disproportionate amount of space to the harp and harpists in Ireland; but that is pardonable, perhaps, as he is the author of a 'History of Irish Music.' There are sections on the leading harpists, ending with John Cheshire of Brooklyn. The chapter on the harp in the orchestra gives a good summary of the increasing use of this instrument in the scores of Spohr, Meyerbeer, Berlioz, Liszt, and Wagner, culminating in the six-harp rainbow music of "Rheingold." There are appendices on "The Æolian Harp," "Epochs in the History of Harp-Making," and bibliographic sources.

It was to be expected that, after the deservedly favorable reception of his 'Tonal Counterpoint,' Professor Spalding of Harvard would also issue a text-book on 'Modern Harmony' (Arthur P. Schmidt). In this case he has associated with himself the well-known American composer, Mr. Arthur Foote. Their joint product is a model of clearness and utility. The keynote to the work may be found in this assertion: "When we find a rule constantly broken by one great composer after another, it is probable that the rule ought to be modified or given up, and not that the composers are wrong." The book is in every way remarkably up to date. In these days of harmonic daring and searching for new paths, the chapters on the chords of the ninth, eleventh, and thirteenth, and on the old ecclesiastic modes, are of special interest. The examples chosen are on the whole more modern than those in German textbooks. Grieg, Dvorák, Tchaikovsky, Franck, Debussy, Elgar, are cited; nay, even the American composer is not ignored, illustrations being taken from works by Paine, Chadwick, even Mrs. Beach; but why was the richest and most original of all the American sources of harmony—that to be found in Edward MacDowell's works—entirely ignored? It is passing strange. Mr. Foote, however, has kept himself modestly in the background; unlike Richard Strauss, who, in bringing Berlioz's work on Orchestration up to date, has taken most of the examples from his own works.

The Oliver Ditson Company could not have chosen a better editor for their collection of Schumann's pianoforte compositions than Xaver Scharwenka. While every amateur may miss this or that pet piece, the editor has succeeded remarkably in his choice of the half-hundred most precious nuggets. Here are 188 pages of music never excelled for inspiration, except in the same number of pages by Chopin. Mr. Scharwenka's introductory essay is printed in German as well as in English, and contains much in a short space. As regards Helen Hopekirk's 'Seventy Scotch Songs,' in the

same series, opinions may be divided. Those who care only for popular tunes with any serviceable accompaniment will find this collection acceptable; whereas the epicure who likes his folk-music pure and unadulterated will be likely to object to many passages in which the arranger has exercised her faculty of harmonizing with too little regard for the racial essence of the tunes. The preface dwells largely on the Celtic music of Scotland; and attention is called to the fact that "numbers of the more modern melodies owe their birth to the bagpipe, which superseded the harp within three hundred years."

Old Provence. By Theodore Andrea Cook, M.A., F.S.A., Sometime Scholar of Wadham College, Oxford, Author of 'Old Touraine: The Life and History of the Châteaux of the Loire.' In two volumes. Charles Scribner's Sons. 1905.

Whoever else is pleased with this book, which has a comely appearance and excellent illustrations, mainly architectural, the womankind of Arles and thereabout is certain to be. The author finds that the women of Arles have continued the purest types of classic Greek beauty. He lays this to the fact that Arles was an early Greek (Phocæan) colony. In volume ii. he even claims them, associating with them this time those of San Rémy, as a sufficient consolation for all the wreck and havoc his old Provence has been subjected to in the course of the numerous historic strata deposited therein by the ages. This circumstance is certainly important if true. It is not held that it extends to the other Greek colonies or is found in Greece itself, or that it extends to the men; and it may be added that it is not within the observation of at least all previous travellers, and, furthermore, that Arles, in the delta of the Rhone, is not very far from the great district of marshes below, so afflicted with mosquitoes and malarial fevers, which would not seem at all a favorable environment for the production and persistence of an exceptional form of beauty. If this book should be widely read, and if many of his fellow-Englishmen should be drawn to Provence, as the author hopes, because it used to be a fief of Richard Cœur de Lion, may it not be that a too earnest curiosity or zeal of verification on this subject may cause the fair objects of the panegyric some embarrassment?

Mr. Cook's Provence extends from Carcassonne, in Dauphiny, to Fréjus in the French Riviera. But he does not propose to cover all this ground; he indicates with a diagram—which would have been clearer with more names attached—that his subject is chiefly the lower course and delta of the Rhone, the limits being at Montpellier on the one side and Marseilles on the other. Even within this district he does not try to tell all; having "determined to write a book and not a library," as he states, he has very properly adopted restrictions which might have resulted, but unfortunately did not, in a desirable thoroughness. Sentimentally it is the usual Provence of good King René and adventurous Queen Jeanne, and the book is a special tribute of enthusiasm to the strong influence of the new school of literary men, the Félibres. The pages are liberally sprinkled with ample quotations, carefully translated in foot-notes, from Mistral's 'Mirèio,' 'Calendal' and those other pastoral epics in which he celebrates the genial home feeling, and seedtime and harvest, and the traditions of the past told round the winter fire; and the graceful story of 'Clémence' is given in full, as is that of 'Aucassin and Nicolette' elsewhere. It is true that complete versions of all these in French, where not in English, can now be found. On the other hand, the story of Petrarch and Laura would have been better more consecutively told, instead of being treated controversially, and a sense of humor would have saved it, as here presented, from considerable risk of affording amusement for the scoffer.

The tone of the book is very serious, the style strenuous, as, for example, in the account of the plague of 1640, "in the seething caldron of close-packed and poverty-stricken humanity which the amphitheatre [at Arles] had become." "They caught a glimpse of the hell-mouth beneath them. From its pestiferous recesses rose the noisome exhalations of a crowded, airless pit. The smoke of fires swirled fitfully from every corner [in spite of the lack of air as noted], and cooking-pots hung heavily above them. . . . Men moved to and fro about their hideous business. A stir of indescribable ferocity, of smothered vice, echoed from the cavernous vault," etc. Metaphors often come very close to being mixed, as where, again, Old Provence, like the great Rhone dissipating itself among the marshes, never reached the *zenith* of its prefigured destiny.

Mr. Cook, F.S.A., is evidently an architect, and he informs us that he means to "say as little as possible of the history that cannot in some degree be traced in stone"; an excellent programme this, which, if adhered to, would, despite the many books, give him a place of his own. The architectural point of view is always a capital one, and, indeed, what with the rapid unification of all manners and customs, dress, and products of industry, will soon be the only one for the seeker for picturesque interest; but the writer of this book feels himself much more called towards deliverances on history than on his fine old architecture. He leads us to Carcassonne, and, giving but a casual touch or two to the great fortress—restored by Viollet-le-Duc to be a thorough example of the stronghold of the Middle Ages—leaves us sitting down before it, as it were, while he goes off for a twenty-seven-page excursion on the Albigensian heresy. At Avignon, besides eliminating the quite fascinating old Villeneuve, across the river (for want of space, he frankly confesses), he hastens very summarily through that capital itself, to devote some sixty pages to the history of the popes that once ruled it. At the Abbey of Montmajour he has "deliberately said nothing of the inextricable mixture of eighteenth-century work on the hill," in order to discuss the relations of Church and State and the division of Charlemagne's empire; and at Aigues-Mortes we hear about the Sicilian Vespers because Charles of Anjou, to whom it happened, was a brother of Saint Louis, who sailed from there with two thousand vessels for the Crusade. It is an interesting touch, by the way, a striking reminder of the absolute distinctness of Provence and France, which have for so many centuries been one, that Saint Louis had to buy this harbor, Narbonne being silted up even then, and France having no southern port whatever. Aigues-Mortes has followed the fate of Narbonne in its turn, and so have Arles and Fréjus. Once most important maritime places, they are now miles away from the sea. Swamps, dykes, lagoons, quicksands, and changing shoals and bars are the characteristic of the region, due to the alluvial deposit by the rivers; not less than four distinct coast lines can be traced at Aigues-Mortes, and the Mediterranean retreats farther every year.

It is not claimed that this history is from any new sources; it is collected, and, naturally, it cannot be very complete; indeed, our knowledge of all sorts of historical matters, some of them pretty abstruse, is continually taken for granted. Hence the book cannot serve as a monograph even in that way; if we were going in for history, we should have to read a good deal more. The topographical situation and influence of the powerful Rhone are well presented, and there are good pages and paragraphs: the way the early mariners traded along the Mediterranean, hauling up their boats at night, and fast wearing them out in the process, may be mentioned, and the tribute to Aix, "a pleasant town of fountains and front doors and shady boulevards . . . and an excellent library," and the approach, up its fine flight of steps to the lovely portal of the Church of St. Trophimé at Arles, and that to the village of St. Gilles, where there is another portal, in the same captivating style, yet more splendid, though less elaborate. There is room for many books about a region so replete with interest, and it can do nobody any harm to read this one; but, while it will not spare the traveller abroad the need of his guide-books, it has not the light and graceful touch and the gift of vivid presentation that will satisfy the reader who stays at home—the ultimate test. It is a baffling book, and not very clear.

The author advises going to Provence in spring or autumn. The memory of the deadly chill of a night at the inn at Orange when stopping there to see the amphitheatre, in winter, prompts the present writer to endorse this advice; and, recollecting the dire experiences, what with snow, rain, flood, and winds, of some friends who were aiming to visit it all in automobile, after mid-April, one year, he would suggest that, if it be spring, it be as well on into the spring as possible.

The Art of the National Gallery. By Julia de Wolf Addison. Illustrated. Boston: L. C. Page & Co. 1905.

This illustrated guide-book to the London National Gallery belongs to a series on the art galleries of Europe written, we note, entirely by women. The present authoress writes in a popular vein, giving a short critical survey of the different schools of painting, with biographical details of the artists and all current information as to the provenance of the pictures. The book, in its portable form with plentiful photographic illustrations, is obviously intended rather for the traveller who desires to be told in brief all that is salient and amusing

about the pictures than for the serious art student with aspirations towards what is termed "the higher criticism." No suggestions or opinions are offered as to attributions; our authoress keeps very much to the official catalogue on such points. She quotes from Cennino Cennini as to ancient methods, and naturally goes to Vasari for her stories about old Italian masters and the evolution of Italian art. She is often not up to date—for instance, in saying that the authenticity of the "Assumption of the Virgin," at one time attributed to Botticelli, is questioned; it has long been decided on all sides that he had nothing to do with that picture. The story told by Sir William Fraser as to the purchase *by Disraeli's orders* of the "Nativity" of Piero della Francesca at the Barker sale to a "Mr. C." is merely idle gossip. Sir Frederick Barton was known to be bidding for the nation at that memorable sale, and was determined to secure certain pictures at any price; the question came up later on account of this as to whether it was expedient on economical principles for the Director of the National Gallery to bid himself on such occasions, as it caused prices to run up so high.

Early Italian pictures are described with sympathy and understanding of their sincerity and naïveté of feeling, but it is in the chapters on the British school that the book is most readable as embodying so many characteristic anecdotes of the painters nearer to us; their lives and their times being better known. The beginnings of the Royal Academy are especially good reading, with the record of the tiffs of Sir Joshua Reynolds and Gainsborough and the numerous jealousies and rivalries that, from the earliest days, disturbed the harmonious action of that body of artists. One characteristic story about Turner we must quote:

"When he sent a picture to the Academy, it was frequently unfinished; he waited until varnishing day to put in the last touches, sometimes planning these according to the requirements of the hanging and its proximity to other paintings. On one occasion Jones had a very vividly colored picture which was hung close to Turner's. Turner mounted on his flight of steps, palette in hand, murmuring with a chuckle, 'I'll out-blue you, Joney!' and painted in a brilliant sky. Jones, to baffle him, then changed his own picture to a low tone, which made Turner's look absurd. When the little artist arrived the next day, he quite appreciated the joke, and admitted that Jones had got the better of him this time."

In the index we find this anecdote under the name "Sir Henry Burne-Jones," a most extraordinary blunder, while both index and authoress mention the present Director of the Gallery as Sir William Poynter on one occasion, although the latter gives him his own name the first time he is mentioned (p. 60). These are slight errors in a useful work. Almost all artists in the collection are mentioned, and their works described—no light task.

Life of Walt Whitman. By Henry Bryan Binns. With thirty-three illustrations. London: Methuen & Co. 1905.

The first biographies of an eminent man are wont to be all praise; then follow the sharp censures, and then those books which are or claim to be impartial. Mr. Binns's thick octavo volume belongs, or seeks to belong, in the third class. Its author apparently never saw Whitman, and gives no sure indication of having visited America, but the book is dedicated to the author's mother "and her mother, the republic," apparently implying that she is an American; and the long list of books about Whitman has evidently been consulted with care and is copiously quoted, with accurate citations. Reference, too, is often made to the Cambridge (England) volume on 'The United States' in the "Modern History" series.

It can hardly be said that out of this ample material Mr. Binns has woven an absolutely new view of his subject; but he exhibits with a frankness almost amounting to naïveté some aspects of Whitman which his predecessors have exhibited less freely. Thus, he bluntly suggests the entire possibility of Whitman's illegitimate sons having served in the civil war, pronouncing it to be "just possible that some young son of his own, known or unknown to him, may have served among the boys in the opposite ranks before the war was over" (p. 186). To this he elsewhere adds, still more obscurely, "When we remember his separation from the woman and the children of his love, and all the experiences of the war" (p. 252); this woman being unknown to previous biographies. Passing to another unheroic aspect of his subject's career, he admits freely Whitman's tendency—first mentioned, we believe, by Donaldson out of all his biographers—to write enthusiastic puffs of himself. He says, "Whitman decided upon a somewhat questionable method of advertisement: he contributed unsigned notices of his book to the Brooklyn *Times*, with which he appears to have been connected, and to a phrenological sheet issued by Fowler & Wells, his agents on Broadway." Such documents, only too familiar to those who have met them in manuscript collections, seemed to Mr. Binns "not a little astonishing" (p. 109). Again, Mr. Binns fully endorses that side of Whitman which he describes as "his gospel of health, as the message most needed in the world today" (p. 339), without the slightest reference to the fact that this apparently superb type of physical manhood could not bear, when on mere hospital service in the civil war, the changes of climate and other exposures through which so many weaker men lived safely while serving in the ranks; nor does he notice the curious aspect of Whitman's early prostration in health when compared to the robust old age of Bryant at eighty-three, of Whittier at eighty-five, and of Dana at ninety.

He notes, on the other side, the personally lovable qualities of Whitman, his fondness for children and "girl friends" (p. 304), and even mentions his taste for holding the hands of his friends and otherwise personally petting them. He also recognizes that Whitman "took a certain wilful pleasure in denial, for the quality of 'cussedness' was strong in him" (p. 306), adding: "But in other moods he was all generosity, and you knew in him a man who had given himself, body, mind, and spirit, to Love, never contented to give less than all." Mr. Binns further admits that, so far as Whitman's personal traits and habits were concerned, "average American opinion was then undisguisedly hostile, as, of course, it still remains" (p. 214); a statement which we might have supposed to be quite exaggerated but for the curious fact that Whitman did not receive so much as a single vote from among the hundred judges of the "Hall of Fame." Mr. Binns, however, adds that "a number of enthusiastic fools" (p. 335) have appeared as Whitman's admirers. It may or may not be in connection with this general statement that he mentions a file of the *Conservator* as being now accessible in the British Museum Library (p. 300).

When he comes to the consideration of Whitman as a poet, our biographer has little to offer, but thinks his highest flights "naturally impossible to the pedestrian faculties of the mind" (p. 333). He gives us, on the other hand, by far the finest collection ever made of portraits of Whitman at eight different periods of life, and these lend a unique value to the book. He quotes, too, more than once, the poet's ever delightful "Song of the Open Road," but he has not yet discovered, what is coming rapidly to be recognized, that Whitman's poetry at its loftiest takes us into an atmosphere far above his general range, if not above that attained by any American poet, as in this cheering glimpse at human life's last moment:

"Joy, shipmate, joy!
(Pleas'd to my soul at death I cry).
Our life is closed, our life begins;
The long, long anchorage we leave.
The ship is clear at last, she leaps!
She swiftly courses from the shore.
Joy, shipmate, joy!"

L'Œuvre de James Mac Neill Whistler, Mai-Juin, 1905. Paris: Librairie Centrale des Beaux-Arts. 1905.

After the Whistler Memorial Exhibition in London, as our readers know, an *édition de luxe* of the catalogue was published for the International Society by Mr. Heinemann. The Whistler Exhibition in Paris has now been followed not by a catalogue, but by a disorderly collection of reproductions of forty of Whistler's paintings, the greater number of which were exhibited on that occasion. It is issued in portfolio form, in two parts, the second opening with a short biographical introduction by M. Léonce Bénédite, curator of the Musée National du Luxembourg, who was the chief organizer of the Paris show. This show, as it was announced at the time, and as M. Bénédite is careful to recall in his introduction, was undertaken at the initiative of Whistler's official representative, according to a desire, it was said, expressed by Whistler himself; and of the results, as they were seen last summer in the Palais de l'École Nationale des Beaux-Arts, the publication is a "souvenir." It seemed extraordinary then that Whistler, who was so fastidious about his own work during his life, should have wanted to be represented after his death not only by his masterpieces, but by so many slight and unfinished canvases.

There are minor mistakes of spelling in M. Bénédite's introduction—"The Fur *Jackett*," and "*Lymeregis*" as one word, for instance. There are also misunderstandings on his part, not surprising, perhaps, in a Frenchman knowing, apparently, nothing of American affairs. Thus, it certainly would amaze Americans to hear that Whistler was employed in the "Bureau de la Marine" at Washington, whatever that may be, while it is not quite correct to speak of his early

plates as if their title were "Coast Survey." There are, again, some critical opinions with which we find it impossible to agree. We see nothing of Millais in "The Little White Girl," and we might question other statements and conclusions if the introduction were not intended to be the merest sketch of Whistler's life, though there is no valid reason why that should not be absolutely above suspicion. The most interesting material at his command M. Bénédite reserved for his recent series of four articles on Whistler in the *Gazette des Beaux-Arts*.

The reproductions, in some sort of photogravure, are neither very well selected nor very well executed. Some works that are included might better, for Whistler's reputation, have been left out; others were not in the Paris show—"The Yellow Buskin" and the "Carlyle," for example. Nor are the plates satisfactory as a rule. Harmonies, like the lovely "Valparaiso," virtually disappear, and the subtlety of tone vanishes from portraits like the "Mother" and the "Miss Alexander." A vile greenish black ink is at times employed.

Imperfect as it is, of course, the publication is of some slight use for reference, if supplemented by the catalogue of the Exhibition; but, as the catalogue numbers do not appear in the portfolio, it is very difficult, at times almost impossible, to identify the reproductions. The Paris catalogue was modelled on that of the London Memorial Exhibition organized by the International Society, who were the first to attempt a descriptive catalogue of Whistler's pictures and drawings. But the Paris portfolio, if a pleasant souvenir, can hardly be looked upon as a serious record of value to the student and the artist. To collectors, however, it will have value, as it has been issued in an edition limited to five hundred copies. Of these, twenty-five only are printed on special Japanese paper.

Der Holzschnitt. Von Dr. Max Osborn. (Liebhaber-Ausgaben.) Leipzig: Velhagen & Klasing; New York: Lemcke & Buechner. 1905.

This is an agreeably written history of wood-engraving, embracing even a glimpse of the art of the Far East, and shows familiarity with the literature. The necessities of "process" have caused it to be printed on glossy paper trying to the eyes in any light. It is copiously illustrated in an unhackneyed manner, both in the text and by full-page examples, and even by folded inserts of larger cuts, which fare rather badly in the creasing. We shall test the matter at three crucial points, not by way of impugning the general excellence of this treatise, but for the sake of some helpful comment.

Of the technique of wood-engraving in the primitive day of facsimile, line-for-line cutting, comparatively little is to be said. The design is nearly everything. It is so in the case of Hans Holbein, the discourse about whom here relates almost wholly to his pencilled imaginings. Much, inevitably, is said of his Dance of Death, but Dr. Osborn does not make it clear that the best opinion confines Holbein's part in the Trechsel Lyons edition of 1538 to the compositions; nor does he refer back to these from the blocks, as has recently been done, with the probable conclusion that Holbein did not even redraw his studies upon the wood. A further check upon generalization lies in the fact that the originals are not all from one hand. Finally, they were not all in pure line, ready to be transferred. Some were wholly or in part in wash. The significance of this is that Lützelburger, or whoever may be settled upon as the engraver and perhaps the final draughtsman, had to interpret the tone in line. Now in 1789 the Englishman, John Bewick, upon outline tracings rather carelessly applied, recut the Dance of Death, but, profiting by the invention of his elder and more famous brother Thomas, cut his ground, his skies, etc., in tint; so that his work, crude as it is, stands at the parting of the ways between old style and new in wood-engraving—between black line for its own sake and the white line, or stroke, by which both form and color were to be attained. This was Thomas Bewick's deliberate intention as expressed in his autobiography; and all the triumphs of wood-engraving in our time have been in this direction, with no breach in continuity from the elder Bewick down.

Bewick's technique is cumbersomely described for want of a just understanding of it. It would be impossible for the Tyneside craftsman, could he now survey the masterpieces on wood which have carried the development of that art beyond any other in black and white, to unite with Dr. Osborn in pronouncing that wood-engraving, in affecting *Tonmalerei*, has gone beyond its sphere or province. Bewick would recognize them with pride as his own offspring, far surpassing his wildest dreams of perfection. Only a single example of Bewick's craftsmanship is given, and that both small and not specially characteristic, from the 'British Birds.' Dr. Osborn, relying upon bookish authorities, credits him afresh with special contrivance of tools and with the first employment of box, cutting upon the ends of the grain. Bewick himself sets up neither claim; and the last is demonstrably untrue. Box was used for initial letters now owned by the Clarendon Press a century before Bewick appeared, and was cut across the grain.

The American school is fairly treated, but without emphasizing the part in the revolution of tone-engraving played by photographing upon the block. From that moment all flights were possible, and mere book illustration was transcended. The sheet engraving, employing a shallower cut and a correspondingly increased pressure in the printing on Japan proof paper, became an end in itself, a work of art fit to shine beside the etching or the steel or copperplate engraving. What we have seen thus achieved on this side the water, by native and by naturalized German skill and genius, is evidently unknown to Dr. Osborn, though it keeps on winning gold medals at World's Fairs. Unconsciously he affords a glimpse of the progress of one artist where he gives two book-illustrations from the graver of Gustav Kruell—a Gambetta of 1883 and a Tennyson of 1889. Now let Dr. Osborn get hold of his Webster, his Sherman, his Beethoven, and his Franklin, and study his Protean technique under the loupe. It will teach him more than all the books, and help rid him of his antiquated notion of the limitations of wood-engraving.

The Old Colonial System. By G. B. Hertz. Manchester (Eng.) University Press. 1905.

This is a study of English public opinion on Colonial questions during the period that covers the Seven Years' War and the War of American Independence. The author has accumulated a considerable number of extracts from contemporary writers and pamphleteers, many of them curious and interesting. But he is unfortunately apt to lose himself in detail, and to accept at equal value the most flimsy with the most weighty opinions. He is also too much inclined to justify his title, and would have us believe that such English enthusiasm as there was for the American war was based on a conscious effort to save what he describes as the Old Colonial System. In the same way he declares that "the popularity of the American cause in Europe" was due to the "universal detestation of the British Imperial theory"—which is purely imaginary. Lafayette, Pulaski, and Steuben never worried their heads about the Old Colonial System.

Occasionally Mr. Hertz is misleading in his statements, as when, approaching the reasons for England's employment of German mercenaries, he reviews the effective strength of the British army (chap. ix.). Taking various dates between 1748 and 1775, he gives no higher total than 50,000 men; yet Chatham in 1763 had over 300,000 men under arms. Some of the judgments passed appear somewhat immature; for instance, Burgoyne is disposed of as incompetent, prolix, and pompous. There are also a few slips, such as that which makes Hillsborough Secretary of State for India instead of for the Colonies. On the whole, the book contains some interesting extracts and many useful references to pamphlets, but is deficient in other respects.

Life of Omar Al-Khayyami. By J. K. M. Shirazi. Chicago: A. C. McClurg & Co. Pages x., 107. 1905.

In a small but well-written book a Persian gentleman has essayed an evaluation of Omar Khayyam. As the result of a personal acquaintance with the city in which the poet lived and of national sympathy with his writings, his work appeals with justice to those who have fallen under the spell of the bard of Naishapur. After an opening chapter, perhaps the best, devoted to a history and to a description of the city, Mr. Shirazi discusses the birth and parentage of the poet. Here he reaches the interesting conclusion that Omar's epithet of al-Khayyami does not imply that either he or his father was a tent-maker, for which there is, indeed, little evidence; but that he was of Arab descent, or possibly came from Khuzistan or Laristan in southwestern Persia, where the patronymic was, Mr. Shirazi says, not uncommon. The chapter on Omar's scientific labors, on the other hand, is comparatively barren. His services to algebra are utterly ignored, and the leading rôle which he played in the computation of the era of Jalali, by which Persian chronology was definitely reformed, receives too slight a notice to make the impression which it deserves. The vexed question of Omar's Sufiism is decided by the author, perhaps rightly, in the negative;

and he is certainly correct in emphasizing the fact that the Rubáiyát was produced at different times and in varying moods, so that no single system of interpretation is altogether adequate. Mr. Shirazi well says, however, that "Agnosticism, not faith, is the keynote of his works. But it is always Agnosticism modified by Mohammedanism and a very human liking for the joys of life. When the perpetual negation of Agnosticism becomes intolerable, he seeks to forget it in the delights of the senses."

The concluding portion of the final chapter is especially interesting as being written by a Persian. In it the author attempts to explain the fact that Omar is by no means a popular poet in his native land, and he finds the reason in three factors: his lack of religious orthodoxy, which alienated the Mohammedans; jealousy of his rise to the friendship of the Vizier Nizam al-Mulk; and suspicion of his early acquaintanceship with Hassan ibn Sabbah, the notorious founder of the sect of the Assassins.

The only real blemish on the book is the author's anti-religious bias, which he doubtless regards as "smart." His transliteration of Persian names and book-titles shows little consistency. On the other hand, he has evidently read deeply in Persian sources for the material of his biography, and claims to have had access to rare manuscripts in his native land. His copious citations from early Iranian history regarding the life of Omar Khayyám form by all odds the most valuable part of his work, although these very quotations have been more critically discussed and much amplified by E. Denison Ross, now principal of the Calcutta Madrasah, in his introduction to an edition of the Rubáiyát which was published in 1900.

Territories and Dependencies of the United States: Their Government and Administration. By William Franklin Willoughby. The Century Co. 1905.

The American Judiciary. By Simeon E. Baldwin. The Century Co. 1905.

These two additions to the American State Series are very fair specimens of a species of book which seems to be coming more and more into fashion. They may be classified as politico-descriptive, and appear to be designed rather for the general public than for either students or specialists. Mr. W. F. Willoughby is treasurer of Porto Rico, and has, from his connection with the insular Government, a special knowledge of his subject. His book covers a vast field—that of the whole expansion of the United States beyond their original limits. Nearly two-thirds of it are devoted to Porto Rico and the Philippines; but Hawaii, Alaska, Samoa, and Guam are not neglected in a survey which embraces the Northwest Territory, the Louisiana Purchase (developed into integral States of the original system), and the expressly created political organism carved out of the United States as a site for the national capital. Mr. Willoughby's volume will repay careful study, and will force upon the reader the conviction that the United States has now confronting it, for better or worse, "problems" arising out of its expansion which compare favorably in magnitude and intricacy with those of any empire or monarchy of the Old World.

Mr. Willoughby devotes a great deal of space to the treatment of local government and internal administration. He reminds his readers of the fact, generally overlooked, that while the usual practice is to consider dependencies as if the only question involved were the political machinery of their central government, and the determination of the relations between that and the Government of the mother country, in point of fact the deep and sometimes overwhelming difficulty lies in working out a proper system of local government and administration of law, police, sanitation, and education. It is at these points that the annexation enters into, alters, and affects beneficially or otherwise the daily life of the colonist. Another point brought out clearly is that colonial questions must be handed over to experts if they are to be solved intelligently; they do not, as a rule, even present themselves to the minds of legislators or public at home. The author's conclusion is that a Colonial Bureau at Washington is needed. We very much doubt, however, whether a general colonial bureau would not speedily become a refuge for broken-down politicians, who would make a mess of the whole business by attempting some uniform system productive of more confusion than even now exists. The present permanent bureau of the War Department which has charge of the Philippines has less "politics" in it than a new one is likely to cause. Samoa is governed by a naval officer, and the Samoan code and local administration are left, as we understand it, to the Samoans. This simple system works well, although the Samoans are lower in civilization than the Filipinos. In the long run we shall probably find, as other nations have found, that simplicity of management on the part of the home Government and *laissez-faire* within the colony, so far as possible, is the true rule. Imperialists, unless highly educated, like neither.

Judge Baldwin's book deals with an old subject. So far as description goes, it is here and there loosely written—*e. g.*, he says (p. 55) that a decision on a point of law by the highest court in a State "does not, however, bind its *lower courts* as absolutely as would a statute," and adds that an inferior court may *disregard it* if fully satisfied that "the action taken" was "ill-considered and erroneous." Of course Judge Baldwin knows perfectly well that courts of last resort settle the law for inferior courts—this is the chief object and function of appeals. In the same way he allows himself to say (p. 59) that the thing which is "probably the most powerful" to *establish* a precedent is "general recognition by approved writers." If the author, as associate justice of the Supreme Court of Errors of Connecticut, had been told by a lawyer practising before him that a judgment of his court was not an established precedent, because it had not received the general recognition of approved writers, he would hardly have failed to be surprised; yet this is what the reader would gather as the result of his remarks. In discussing the present condition of bench and bar, the author seems carried away by his optimism, for he shows clearly enough that the facts of the case warrant the belief that the elective system and its accompaniment of political (and, frequently, purchased) nominations have lowered the character of the bench and, through it, of the bar. Speaking of Judge Barnard's remark that he had always succeeded in life by helping his friends, the author quotes a French critic of the elective judiciary as saying that his unpardonable crime was that "he proclaimed too frankly the doctrine of the elective judiciary": *il trahissait le secret professionnel.*

Tragic Drama in Æschylus, Sophocles, and Shakespeare. By Lewis Campbell. Longmans, Green & Co. 1904.

Prof. Lewis Campbell is the Nestor among English classical scholars. He won his reputation in the early sixties by his editions of the more abstruse dialogues of Plato, though it is only within the last ten years or so that the Germans, who never quite understand the English habit of binding up one's researches in a college text-book, have fully recognized that he is one of the few Platonic scholars whose work is likely to be permanent. He has edited Sophocles and the 'Republic' of Plato and translated Æschylus, and is the promoter and chief editor of a new Platonic lexicon which, when published, will be of inestimable value to Platonic students. The present "Essay" is rather a recreation—*senectuti sepositum*—than a serious contribution to scholarship; but the recreations of so ripe and well-balanced a scholar are secure of respect and of attentive readers.

Mr. Campbell's purpose is to show the essential points of correspondence between the masterpieces of the Attic stage and of Elizabethan England. For any classical scholar the differences and the resemblances of the two schools of tragedy lie on the surface; but even he will find much that is suggestive in Mr. Campbell's informal chapters, while the English student who reads no Greek should, of course, not fail to grasp at an opportunity of this kind. The Athenian poet, like the Elizabethan, composed his dramas at a time of "great national triumphs, of world-wide interests, of great political crises, great attempts, great successes, great reverses; in which all the powers of humanity for good and evil were manifested with extraordinary energy. Both chose stories which had already taken hold of the popular imagination; both showed how some master-passion, developed to its highest power, might wreck the happiness of a group of human beings." The ancient *répertoire* is further restricted by the identity of motive in different legends; the story of Alcmæon is that of Orestes over again. "Thus there is a real analogy inherent in the fable between Oedipus the King and the tyranny of Macbeth, between Orestes and Hamlet, between the sons of Oedipus and the daughters of King Lear." What Mr. Campbell sets out to do is to show how differently Æschylus, Sophocles, and Shakspere handled analogous subjects—Æschylus, for instance, his Orestes, Shakspere his Hamlet—"how far this has arisen from differences in the spirit of the age or of individual genius," and so on. What he does is to give us a series of rambling notes, all of more or less value, but forming a whole that should be called anything rather than an essay in the strict literary sense. The

greater part of the book is devoted to Shakspere; and in discussing both Shakspere and Sophocles, Mr. Campbell here and there abandons any attempt at consecutive thought in order to give us notes on readings and tragic diction in general. The book is, in fact, a collection of interesting points that have occurred to him in the course of a long life devoted in great part to reading the Greek and English tragedians.

We wish there were any chance of his altering current speech so as to give their proper meaning to two words constantly employed by writers on tragedy. These are "climax" and "catastrophe." The first of these is regularly misused to mean the acme of interest, whereas every Greek student knows that it merely means a gradual ascent. "Catastrophe" to the Greek did not mean, as it does for us, a great disaster or the critical moment of the play which marks the change of fortune. What it should stand for is the close of the action, the "turning down" of the thread that one has been weaving. Both Athenian and Elizabethan tragedy would, as Mr. Campbell maintains, be correctly divided into five parts, the "opening," the "climax" (or gradual ascent), the "acme" (or chief crisis), the "sequel," the "close" (or catastrophe). The acme of interest and the close of a Greek play seldom, of course, coincided. It is for the discussion of points such as these, and for the intelligent studies of the chief Sophoclean and Shaksperean characters, that the reader will find it worth his while to consult this book. Mr. Campbell writes with the sure touch of the scholar, but on page 222 he has fallen into an error that is due to a too keen sense of the appropriate. Horace ought to have said

"Video meliora proboque,
Deteriora sequor"—

lines which Mr. Campbell refers to as "Horace's confession." But they were of course written, not by Horace, but by Ovid, who puts them into the mouth of his Medea when, in the 'Metamorphoses,' she is halting between desire and reason.

The Vegetable Garden: Illustrations, Descriptions, and Culture of the Garden Vegetables of Cold and Temperate Climates. By MM. Vilmorin-Andrieux of Paris. Published under the direction of W. Robinson. E. P. Dutton & Co. 1905.

The English sponsor for this work is the well-known author of 'The English Flower-Garden' and the 'Parks of Paris,' a man of sound judgment and wide experience in things horticultural. The work itself is the joint production of two eminent authorities in all matters relating to the origination and cultivation of vegetables. The horticultural establishments of Vilmorin-Andrieux are doubtless known to many of our readers who have seen the Paris seed-store fronting the Seine. The English translation of the French work has been recast into a convenient form, and, although better adapted to English gardening than to gardens here, will be found to be trustworthy in almost every case under our conditions. Mr. Robinson lays great stress upon the necessity of establishing district markets for local supplies, instead of depending upon the huge chaos of Covent Garden. Of course we do not have exactly the same problem here, even near our large cities, but there is a bad and growing tendency to turn the produce of our suburban gardens into the central markets for redistribution. Every one who has had occasion to live in our summer resorts, whether by the mountains or the sea, knows too well that his freshest vegetables come from the central markets of the nearest large city, instead of from the gardens near by. But these freshest vegetables have sometimes made the expensive and long journey to the city and back to the huckster at the very garden gate. It is like the scarcity of fresh fish at the shore: the fish first are carried to the city and back. This annoying state of things can be changed only by giving to the local gardener and tradesman a steady patronage instead of a capricious one. Perhaps it would be possible even to introduce the fine custom, so prevalent in Germany, of having some open space devoted for a few hours each day to the richly furnished market of all fresh things; thus we might be freed from the tyranny of the corner shop, with its stale produce which has not grown better by its travels.

Again, Mr. Robinson properly appeals to cultivators to select the best and to gather always at the very best stage—two things wofully neglected in our country. He urges the choice of the best before the large, although the latter may seem to give you more for your money. The selection of the best vegetables in every class is not a difficult matter, with this work in hand, provided one bears constantly in mind the difference between the climate of our gardens and that described in the book.

The treatise is characterized by one feature found in no other large work of its class, namely, the prominence given to the characters of the seed. We are told the results of long-continued trials in regard to the duration of the germinating power of all the sorts of seeds. The widest differences here exist, some sorts of seeds being *viable* for only a short period, while others are sound and of high yield after many years. In the French edition, the table summing up these data is full of interest, and it seems a pity that it has been left out of the present one. The facts are fully given, but not in so convenient a form. With Professor Bailey's valuable Cyclopædia, and with this minor cyclopædia supplementing that, our gardeners, professional and amateur, are well equipped.

BOOKS OF THE WEEK.

NEW BOOKS OF DISTINCTION

COUNSELS AND IDEALS FROM THE WRITINGS OF WILLIAM OSLER

The wide publicity given Dr. Osler's recent utterances will direct immediate attention to these excellent selections, which are the first to come from Dr. Osler since he assumed his new duties as Regius Professor of Medicine at Oxford University, England. $1.25, *net*. Postage extra.

CHARLES ELIOT NORTON'S

The LOVE POEMS of JOHN DONNE

"It gives us in convenient form perhaps the best work of a poet not easily accessible to the casual present day reader."—*The Dial*, Chicago. 500 numbered copies each $4.00 *net;* postpaid.
RIVERSIDE PRESS EDITION

THOMAS WENTWORTH HIGGINSON'S

PART OF A MAN'S LIFE

"These ripe and scholarly chapters have an interest and value far exceeding anything that another pen might contrive to say about them."—*The Dial*, Chicago. Fully illustrated, $2.50, *net*. Postpaid, $2.68.

SAILORS' NARRATIVES OF NEW ENGLAND VOYAGES

With Notes by GEORGE PARKER WINSHIP

There is no more delightful reading in the world than the old sailors' narratives relating to the actual explorations of the New England coast. These have been carefully selected from rare and recondite sources, and furnished with a brief introductory note to each narrative, setting forth the interesting and significant facts concerning the narrator. 450 numbered copies, each, $8.00, *net*.

GEORGE HERBERT PALMER'S

WORKS OF GEORGE HERBERT

"An elaborate edition of Herbert that is learned without being pedantic, and full without being repl'ete—the kind of work of which our universities might well be more prodigal."—*New York Evening Post*. In 3 volumes. Fully illustrated. $6.00, *net*. Postpaid, $6.44.

PAUL E. MORE'S

BYRON'S COMPLETE POEMS

"What a kindness it is to the busy man, what a blessing to him whose shelf-room is limited, to put all of a classical author's works into a single volume that is readable and attractive."—*New York Sun*. With portrait, notes, and index. $3.00.

THE FARCE OF MASTER PIERRE PATELIN

Englished by RICHARD HOLBROOK

"Mr. Holbrook's excellent translation of 'Patelin' is a clever piece of work, and it stands for a particularly interesting period in dramatic art."—*Boston Advertiser*. Illustrated with facsimiles of the woodcuts in the edition of Pierre Levet, Paris, ca. 1489. With notes and stage settings. $2.00, *net*. Postpaid, $2.12.

HAMILTON WRIGHT MABIE, in reviewing Mr. Greenslet's "Lowell" and Professor Mims's "Lanier," in the *New York Times*, says: "It is safe to say that that no more thoroughly competent pieces of writing have been done in this field in this country than these well-constructed, well-balanced, and well-written studies of two men of high importance in our literary history."

FERRIS GREENSLET'S

JAMES RUSSELL LOWELL

"To say that Mr. Greenslet's chapters on Lowell's prose and poetry are the best ever written on this subject, does not sufficiently distinguish them; they will stand among the best criticism produced here or in England in recent years."—WILLIAM R. THAYER in the *Harvard Graduates' Magazine*. Illustrated. $1.50, *net*. Postpaid, $1.62. (*2d edition.*)

EDWIN MIMS'S

SIDNEY LANIER

"An admirable piece of discriminating, judicious, intelligent and sympathetic interpretation. The story of a Southern man told by a Southern man, it rises at once above the mists of provincialism into the clear air of universal standards and ideals."—*The Outlook*, New York. With portraits. $1.50, *net*. Postpaid, $1.62.

THE ROMANCE OF THE MILKY WAY

By LAFCADIO HEARN

"The collection of the unpublished writings of the late Lafcadio Hearn is a charming one—brief and varied, yet distinguished withal by that sure touch that made everything from his vanished hand delightful."—*The Argonaut*, San Francisco. $1.25, *net*. Postpaid, $1.35.

SAMUEL M. CROTHERS'S

THE PARDONER'S WALLET

"It is time that the country awoke to the fact that in Samuel M. Crothers it has a humorist of the first rank, a satirist of no mean ability, and an essayist to be reckoned with."—*Chicago Tribune*. $1.25, *net*. Postpaid, $1.36.

EDWARD STANWOOD'S

JAMES G. BLAINE

"Mr Stanwood tells the whole story clearly, and his narrative from first to last is picturesque and entertaining."—*New York Times*. With Portrait. $1.25, *net*. Postpaid, $1.37.

New McClure Announcements

Goldwin Smith

IRISH HISTORY AND THE IRISH QUESTION

A brilliant résumé of Irish history and of the past relations between England and Ireland in the endeavor to ascertain the precise status of the Irish question to-day and to provide for its rational solution in the future. Written in a spirit of the most enlightened sympathy and understanding. Cloth. Net, $1.50; postpaid, $1.62.

Rev. Washington Gladden

THE NEW IDOLATRY

A series of addresses having as their common purposes the revival of ethical idealism in our national life. Dr. Gladden is regarded, because of his recent utterances, as probably the foremost moral advocate in America. Cloth. Net, $1.20; postpaid, $1.30.

Martin Hume

WIVES OF HENRY VIII.

Martin Hume has had access to hitherto unexplored archives, both Spanish and English, and from the letters and documents thus newly discovered, he has been able not only to reconstruct the lives of Henry's consorts more fully than ever before, but to throw new light upon the political and religious bearings of the king's marriages. Cloth. Eight photogravures. Net, $3.75; postpaid, $3.92.

George Edward Woodberry

THE TORCH

This book is generally regarded as Professor Woodberry's masterpiece. It breathes not only an intense love of books, but an equally deep sympathy with life. "What he says of Shelley . . . and his sympathetic appreciation of Milton is a joy to lovers of poetry." *Milwaukee Sentinel.* Cloth. Net, $1.20; postpaid, $1.30.

SWINBURNE

The latest volume in the Contemporary Men of Letters Series. Never has recognition so complete and eulogy at once so thorough and discriminating been accorded to the last Victorian poet. Cloth. Net. 75 cents; postpaid, 83 cents.

G. Lowes Dickinson

THE GREEK VIEW OF LIFE

Another brilliant contribution to literature by the famous author of "Letters from a Chinese Official." This latest work is a delightful, clever and attractive exposition of the manners and customs of the Greeks as illustrated in their literature. Cloth. Net, $1.00; postpaid, $1.07.

A MODERN SYMPOSIUM

Imagine Lord Salisbury, Gladstone, Disraeli, Joseph Chamberlain, Morley, Tennyson, Browning and others of the most brilliant men of the 19th century debating together in informal after-dinner fashion in defence of their individual views of life, and you will have some idea of the interest in this volume. Cloth. Net, $1.00; postpaid, $1.07.

Charles Wagner

THE GOSPEL OF LIFE

In this book Dr. Wagner points out that it is not only necessary to live the simple life, but also to live the upright life. There are worlds of philosophy and plain thinking in these comforting pages. Uniform with other Wagner books. Cloth. Net, $1.00; postpaid, $1.07.

JUSTICE

A plea for tolerance and justice, as the very fundamentals of the solution of the vital questions of our time. Righteousness and justice are here interchangeable terms; if we would first become righteous. Cloth. Net, $1.00; postpaid, 1.07.

NOTEWORTHY BOOKS

JUST PUBLISHED — *The autobiography of*

ALFRED RUSSEL WALLACE

One of the leading scientific men of the day. This important work is published under the title

MY LIFE

A Record of Events and Opinions

Two vols., large 8vo, cloth, illustrated, *net*, $6.00

The publication of the autobiography of a man so prominent in the great scientific movement of the last century, which brought forth Darwin, Spencer and Huxley; who preceded these men and outlived them, is an event of importance to the bookseller and the public.

In commenting on this work, which has also just appeared in England, W. Robertson Nicoll says:

"It goes without saying that it is full of interest, surprise and fascination. . . . . A book which ought to be seriously considered by all who are interested in great problems. The personality that shines through these pages is very attractive. The command of facts, the power of generalization, and the freedom of expression everywhere apparent will delight intelligent readers."

The New York *Sun* in an advance notice says:

"Since the publication of the 'Life of Darwin' no book of so much interest at once to scientists and the general reader has seen the light."

Alfred Russel Wallace is the author of *Darwinism*, *The Wonderful Century*, and *Man's Place in the Universe*.

THE ARTIST'S WAY OF WORKING

By RUSSELL STURGIS

Author of "The Dictionary of Architecture," etc.

¶ Addressed not only to artists and to art students, but also to the art loving public. It tries to disclose to them in untechnical language so much of the methods by which the artist produces his effects as will enable them to enjoy and appreciate art works much more fully than ever before. ¶ The plan for illustration is very comprehensive. There are numerous text-cuts, and fully 100 full pages in half-tone and photogravure. The book is most carefully printed, with ample margins, and handsomely bound. Cloth, 8vo, with over 200 illustrations; 2 vols., net, $15.00.

THE ART OF ORGAN BUILDING

By GEORGE ASHDOWN AUDSLEY

¶ The largest and most complete treatise on the science and art of organ building in the English language, in many important directions surpassing every treatise heretofore published in any language.

Numerous illustrations, 2 vols., 4to, special, net, $20.00.
Edition de Luxe, numbered and signed, special, net, $35.00.

CATHEDRAL CITIES OF ENGLAND

By GEORGE GILBERT

¶ A superbly printed book on a subject of as much interest to the American as to the English people.
Full-page illustrations in in color, 8vo, net, $3.50.
De Luxe edition, boxed, special, net, $10.00.

GREAT PORTRAITS

Described by Great Writers
Edited by ESTHER SINGLETON

¶ Portraits of the famous men and women of the world, accompanied by thoughts concerning them expressed by great writers.
Illustrated, 8vo, net, $1.60.

THE SILKEN EAST

A Record of Life and Travel in Burma.

By V. C. SCOTT O'CONNOR

Comptroller of Assam

¶ An exhaustive and authoritative work on the Orient—of great interest to the general reader.
With over 400 illustrations, 2 vols., net, $12.00.

A YANKEE IN PIGMY LAND

Being the narrative of a journey across Africa from Mombasa through the great Pigmy Forest to Banana.

By WILLIAM EDGAR GEIL

Author of "A Yankee on the Yangtse," etc.
Over 100 illustrations from photographs and a map.
8vo, cloth, net, $1.50.

The University of Chicago Press----New Books

General Sociology

ALBION W. SMALL

The book is an exposition of the development of social theory from Spencer to Ratzenhofer, and a plea for completion of the general structure of social science. 753 pp., 8vo, cloth; net $4.00; postpaid $4.23.

A Decade of Civic Development

CHARLES ZUEBLIN

The author gives a concise and spirited account of certain definite measures—political, economic, social, and artistic—for the betterment of American cities. 200 pp.; 12mo, cloth; net $1.25, postpaid $1.39.

Primary Facts in Religious Thought

ALFRED W WISHART

Seven short essays which state the essential principles of religion, and clear them from the confusion arising from theoretical changes and historical criticism. 125 pp.; 12mo, cloth; net 75c., postpaid 82c.

Egoism: A Study in the Social Premises of Religion

LOUIS WALLIS

The author sets forth the proposition that "egoism is the only 'force' propelling the social machine." He then proceeds to demonstrate by evidence drawn from biblical history, and lastly shows its practical bearing on the present social problem. 137 pp.; 16 mo., cloth; net $1.00, postpaid $1.10.

Christian Belief Interpreted by Christian Experience

Knight's Primer of Essentials in Grammar and Rhetoric

For Secondary Schools

25 Cents

This primer is the outcome of the need felt by many teachers in secondary schools for a concise and compact summary of the essentials of grammar and rhetoric. It is designed as a guide in review study of the ordinary text-books of grammar and rhetoric, or as an aid to teachers who dispense with such text-books, and it harmonizes well with the recommendations of the College Entrance Examination Board.

The Nation.

NEW YORK, THURSDAY, DECEMBER 14, 1905.

The Week.

Distinct notice was served upon the President, by the vote of the House on Thursday on the Panama Canal appropriation, that no more lump sums will be granted him to spend at discretion. Enough Republicans joined with the Democrats to cut some $5,000,000 off the estimates which the Administration submitted as a minimum. Moreover, an amendment was adopted demanding hereafter itemized estimates, especially for salaries. The latter have been, so think many Congressmen from the backwoods, not accustomed to our new and large Imperialistic ways, unduly lavish, and have fallen more freely upon the just (that is, the President's personal friends) than upon the unjust (whom we will not give pain by specifying). Secretary Taft is hurt that there should be even an intimation that graft may have crept into expenditures under his direction. So was Secretary Wilson, so was Postmaster-General Payne, until the facts in their departments were brought out. Nobody accused them of personal dishonesty, as no one would dream of accusing Mr. Taft; yet the system has been bad, wide open to abuse, even if abuses have not crept in. That is for Congress to determine in the investigation which even the Secretary now admits to be inevitable. Meanwhile, the House has called a halt. It has knocked one-third off the President's Panama emergency estimates, although he had carefully explained in his message that to do so would be a "great folly," if not actually a "crime"; and it has constrained the Senate to follow suit.

So far as regards its figures, which cover the fiscal year ending June 30, the Secretary of the Treasury's report to Congress tells little that is new. The year's Treasury deficit of $23,004,228 was known five months ago; it has also been plain enough that the estimate in last year's report of a $22,300,000 surplus for the present fiscal year could not be fulfilled. The Secretary himself now alters that cheerful forecast to prediction of an $8,000,000 deficit. He makes this change, notwithstanding the fact that his forecast of revenue for the fiscal year 1906 is increased $13,000,000 as compared with his estimate a year ago for the same period. The report is entirely frank on this phase of the situation. Secretary Shaw points out that the yield of customs and internal revenue is always uncertain, even with unchanged tax laws; that "conditions which cannot be anticipated are always reflected in revenues," and that "a very small cloud in the financial sky will cause marked fluctuation in customs receipts." This is perfectly true; and it is an excellent argument against the resting of the Treasury's fortunes on a protective tariff, whose revenue-producing power is always highest when revenue from that quarter is least needed, and always collapses utterly when income from other sources is declining. The Secretary's only conclusion is that the Treasury ought not to encroach on the present very large money surplus in its vaults and in depository banks. This advice would be more useful if Mr. Shaw would tell us what he would have the Treasury do when confronted with chronic deficits.

The most striking feature of the report of the Secretary of War is the omission of any mention of the beer canteen. Apparently, the authorities are willing to let the matter drop, or they feel, in view of the reports of the Inspector-General and Military Secretary, that the case for the sale of beer is not quite so clear as was thought. Another motive may be the natural desire to give the new post recreation buildings a longer trial. Secretary Taft does not yield any space to the advocacy of the President's plan of promotion by selection, but very wisely urges greater severity in the elimination of unfit officers as one way of aiding promotion. He is quite correct in saying that this is both "possible and practicable." He would dismiss all unfit or deficient lieutenants, and retire captains and field officers who fail in their professional work. The needed legislation to bring before a board any officer deficient in his studies he should have without loss of time. At the time of the reorganization of 1870, there were so-called "benzine boards" which did a lot of house-cleaning. But the army needs a purging as much to-day as it did then, unless it is to be loaded up with a set of drones and incompetents as a result of the reorganization of 1901. If Mr. Taft should devote himself to this subject, obtain the laws he needs, eliminate politics, and hold officers strictly responsible for their military progress, he will do the army an even greater service than Mr. Root.

Without other comment than italics, Secretary Hitchcock refers, in his annual report, to the punishment visited upon Bartlett Richards and William G. Comstock of Nebraska for illegally fencing and using some 250,000 acres of Government land: "*They pleaded guilty, and, after consideration of the matter, the court imposed a fine in each case of $300, and sentenced the defendants to the custody of the marshal for six hours.*" This terrible penalty was inflicted against the advice of a District Attorney who seems to have much the same tender feeling for land grafters as the child who always "kicked the stranded jellyfish back into the sea" had for dumb creatures. Richards has been one of the boldest and most successful of the tribe that has grown rich on the use of public land. He has been exceedingly active in the business of securing homestead claim assignments, but even this method of increasing his holdings has been too slow; the Government's surveyors found in one enclosure 77,000 acres of public land held without the shadow of a claim. "What are you going to do about it?" he asked when Secretary Hitchcock's agents first exposed the fraud. "Prosecute," ordered Mr. Hitchcock. Indictments against Richards and others were found, but when the District Attorney showed an inclination to push the cases, he was replaced. Then a special prosecutor was sent out who was not under the domination of Richards.

After Secretary Hitchcock's agent arrived, there followed an offer to confess the facts, and a promise to remove the fences. The District Attorney thereupon recommended the dismissal of the charges, but the special prosecutor refused. The only alternative left—a plea of guilty and appeal to the mercy of the court—was adopted by Richards. The District Attorney assured the judge that the man was acting in good faith, that the illegal fences were coming down, and that he was entitled to special consideration. The farcical sentence followed, though the law provided "a fine of not exceeding $1,000 and imprisonment for not exceeding one year for each offence," and Richards went back to the management of his "land and feeding company." So far, therefore, the Government has not been able to "do" anything practically, but in Nebraska it is beginning to be felt that Mr. Hitchcock means business. A number of other public-land pirates have actually broken up their pastures, and the crusade is extending to Kansas, where, a few days ago at Topeka, seven indictments were returned by the grand jury against the unlawful holders of 50,000 acres of Government pasture land.

The verdict of the court-martial in the case of Midshipman Meriwether is most disappointing. If he is to be excused because of the existence of prizefighting

in the past, he should have gone scot free. As it is, his serious offence is not condoned, but is penalized merely by a reprimand and confinement to the Academy for one year—a nominal sentence, when one considers that a similar case of manslaughter would be punished by a prison sentence in this State. Here is a case where the ends of justice would have been much better subserved by turning the offender over to a civilian court. We cannot but assume that the corps of midshipmen will look upon the outcome of Meriwether's trial as but a slight rebuke, and as indicating that the high officers of the navy are little opposed to the practice of prizefighting. Fortunately, the Secretary of the Navy has taken an admirable stand on this question, and, now that the Meriwether matter is settled, the public may look to him to end a disgraceful and barbaric custom, reflecting seriously on the standards and discipline of the Naval Academy.

However much or little reliance is to be placed upon the early reports of favorable prospects for the two-State bill in Congress, it is certain that the public attitude toward that measure has changed considerably. As regards the amalgamation of Oklahoma and Indian Territory, there is no longer any practical difference of opinion. Even a virtual referendum in Indian Territory went against separate Statehood, and the bill for the combined State would go through Congress in a day if presented by itself. As for Arizona and New Mexico, their reunion to form a sinble State will doubtless be opposed by the same interests and for the same reasons as heretofore. It can no longer be said, however, as it has been so often, that Arizona is "a unit" for independent Statehood. That side seemed to have everything its own way. Now the other is making itself heard. A number of newspapers are supporting joint Statehood, and mass meetings at several places have endorsed it. Moreover, some extremely good arguments are furnished by recent revelations about the men slated for Congress if two States are made on the Southwest border. If the State of New Mexico is to come into being primarily to make "Bull" Andrews a Senator, Congressmen otherwise friendly may well hesitate.

The various suits for rebating, to be instituted in the Federal Court at Philadelphia, ought to test thoroughly the efficacy of the present law. Attorney-General Moody is reported to entertain doubts whether convictions can be secured under existing statutes. Whatever may be the arguments for and against Federal rate regulation, rebating is an evil concerning which there can be no dispute. When a common carrier secretly builds up one shipper and destroys another, it is guilty of injustice for which the most skilled casuist of the Standard Oil Company can offer no defence. If the law does not provide a remedy, the law should be amended. To that every honest man will agree. But the only way to find the defects of the law is to test it, to carry the suits through to the bitter end. In open debate on Monday Senator Tillman said hotly, "I don't believe we shall ever get anywhere with this matter as long as the President of the United States, who has taken the lead in it, is willing to whitewash members of the Cabinet, as he did Paul Morton." The reference, of course, is to the Santa Fé case, in which Messrs. Judson and Harmon were called off so soon as it was evident that they were closing in on the President's friend Morton. That celebrated fiasco has left an unpleasant impression on the mind of people who, before trying a new device, want to see the old law enforced up to the hilt.

The movement against the issue of railway passes is evidently gaining headway. With such companies as the Pennsylvania, the Reading, the Lackawanna, and the New York Central suspending the privileges to politicians and newspaper men, the smaller roads can afford to pluck up courage and refuse to be bled. In this juncture, when there is so much searching of heart, no one comes forward to defend the system of pass-giving; for it is really indefensible. People must be vastly edified by the virtuous attitude of the newspapers, which are now ready to let judgment begin with the House of God. The pass for the employee of the railway is no concern of the public; but the pass for the favored shipper, the newspaper-writer, and the politician is. A railway is not a benevolent institution. It does not bestow favors without expecting something in return. When it sends free tickets to a heavy shipper, it in effect offers him a rebate on his freight-bills, thus evades the spirit of the law, and handicaps every one of his competitors. The editor receives passes, not because railway presidents esteem editors above the rest of mankind, admire their literary skill, their accomplishments in conversation, and their rugged independence of character. No; the explanation is less flattering. The railway president frankly wants kind treatment in the news and editorial columns. He gets it. And as for the politician—the railway pass distributor wants to lay him under "a moral obligation," as C. E. Hughes put it in examining Senator Platt. In fine, the pass is a petty bribe which purchases "influence" or a vote the right way. The sooner the corrupt practice is abolished, the better for all concerned.

It was over the "right" of a Representative to select postmasters within his district, it will be remembered, that the Hon. "Gussie" Gardner of the Sixth Massachusetts District entered upon his famous controversy with Secretary Moody last year. The President, who made short work of Congressional pretensions in that case, is now preparing, according to report, to extend a virtual merit system to all the Presidential postmasters. "Where the term of such an official has expired, he will be continued in the service if his record is reported to be 'good' or 'excellent' "—this is the outline of the plan. The "clean-sweep" idea recedes constantly further into the background. Definite terms, established either by law or by custom, have succeeded tenure solely dependent on politics. A change of the party in power does not displace a faithful postmaster until he has rounded out his four years. Of course, it is a much easier matter to say that he shall not be displaced even then, when, as at present, most of these officials already belong to the dominant party. The strain will come when a Democratic President is faced by the array of Republican postmasters. Whether the fourth-class postmasters are ever to be placed in the classified service is the next question.

South Carolina's dispensary system is once more in trouble with the Federal authorities. The United States Supreme Court has decided that when the State becomes a liquor-dealer, even for a high moral purpose, it must pay internal-revenue taxes like anybody else. The court reasons that if a State could, by taking over any line of business, relieve that business of its contribution to the Federal revenue, the several States could, by extending their own functions far enough, "practically destroy the efficiency of the National Government." The sum involved—which was originally paid and sued for by South Carolina—is $20,000; not a large tax for a business with annual profits of $400,000. Still, the decision will doubtless cause the same resentment as the original-package decisions rendered when Tillman had first started the dispensary. These two Federal decisions have first made the State liquor monopoly impossible by legalizing private importations in the original package, and now taxed the State into the bargain.

Robert M. La Follette was elected a Senator of the United States a few days more than eleven months ago, and it is now for the first time definitely known that he is preparing to accept the new post. The versatile Governor, throughout his career, has almost uniformly escaped from doing the particular thing people expected of him. In this case,

instead of going to Washington at the beginning of the session like an ordinary Senator-elect, and letting himself be sworn in, he will tarry a while longer to put his own house in order. Not only do the primary and railroad-commission laws passed last winter need some tinkering, but important litigation over railroad taxes is still in the courts. Hence the special session and the Governor's decision to see it through. This is the long session of Congress, and if the lawmakers at Madison are expeditious, he may still get to Washington in time to have a hand in the rate-bill debates.

When philanthropy is at the mercy of "eminent counsel," we get such unhappy spectacles as Mr. Ryan presented at the insurance inquiry on Friday. Conscious of having performed a great public service in snatching control of the Equitable from envious and angry financial rivals, he was eager to inform Mr. Hughes about the manœuvres and threats of his quondam competitor, Mr. Harriman, but was cruelly stopped by "advice of counsel." This was obviously a great surprise and disappointment to Mr. Ryan, and nothing but his respect for Mr. Cravath as an authority on the whole duty of a financier skating on thin ice induced him to obey that gentleman and commit a misdemeanor. For the statute is clear. If Mr. Hughes's questions were "material" and "proper," Mr. Ryan made himself liable to fine or imprisonment, or both. And there was no reasonable doubt that the questions were material and proper. They went straight to the heart of the matter the committee is investigating—that is, the corrupt alliance of insurance companies with great speculators and powerful politicians. If Mr. Harriman tried to frighten Mr. Ryan by threatening to turn Boss Odell loose on him, it was of the highest public importance that the fact should be known. A little persuasion from Mr Jerome loosened Mr. Ryan's tongue on Tuesday, and we now know that Mr. Harriman, on being refused a half-share in the Equitable, threatened to use his "legislative influence" against him.

In Mr. Edward Atkinson we lose a man who had to be called an old-fashioned American, though his type was once common. He had by study and reflection formed convictions about economics and government which he did not feel at liberty to alter while you waited. His reasoning powers and his conscience he thought of as something else than a mere register of passing popular feeling. What made him seem so singular in his later years was that his opinions did not ebb and flow with the majority in elections. He was of the school of democracy illustrated by John Stuart Mill, believing that liberty is a demonstrable good; that the force of argument is really of more weight than the decree of a caucus; that public policy ought to be settled by considerations of reason and justice rather than of profit. In an age when it was the fashion to meet all objections by saying, "Every one is doing it," or "The bill is sure to pass," Mr. Atkinson retained the awkward habit of insisting upon examination and discussion. This was what made him so often voted "a bore"—he had such a wearisome way of bringing new-fangled notions to the test of fact and logic, and proving them absurd and dangerous! One cannot imagine Senator Lodge being really patient with such a man. But his sturdy consistency, his holding fast to the proved good, his scorn for humbug and his love of sincerity, his stanch defence of true Americanism, with his large attainments and wide and fruitful studies, made him one to value living and to mourn when dead. As a business man, too, he revolutionized the methods of insuring cotton mils, and he warmly sympathized with the South in its efforts to develop its cotton industries and attain an independent economic growth. His voluminous writings have contributed little to economic thought, but are replete with practical suggestion.

What makes Capt. Roald Amundsen's achievement in sailing a small vessel from Greenland to the Alaskan shores the more remarkable is the small size of his vessel and crew. "We shall be eight men all told," he wrote on announcing his plans, "and our vessel, the *Gjoa*, is 47 tons register, 70 feet long between uprights, and twenty feet broad. It may seem that the vessel is small, and, indeed, it is one of the smallest which have set out for a long polar expedition, but the choice was made after full consideration." And evidently with wisdom. Yet strange is it that the most successful craft to encounter the Northwest ice-pack should be this cockleshell, in which few people would care to cross the Atlantic, even in calm weather, and which at best can make only four knots an hour by means of its gasolene motor. Practically, therefore, so far as his vessel was concerned, Amunsden was but little better off than Frobisher, whose two ships of 1576 measured 20 and 25 tons. Even Barents, whose discoveries along the coast of Nova Zembla in and after 1594 were so important, had a ship of 100 tons. But Amundsen's idea was "to trust to patience, and steal through when there is an opportunity." He made no effort to penetrate to the north. His main object was to locate the magnetic pole, the position of which was fixed for the first time in 1831 by Commander (afterward Sir) James Clark Ross on the western shore of Boothia Felix, in latitude 70° 5′ N., longitude 96° 47′ W. Whether he has actually done so is not clear from the dispatches.

It was argued over and again before the Immigration Conference here last week that the questions of Chinese exclusion and boycott of American goods were entirely unrelated, and each should be considered solely on its own merits. It will be hard to find support for this view, however, in the "agreement" reached on Sunday between the American merchants at Hong Kong, the Chinese guilds, and the boycott committees. The means by which the boycott can be ended turn out to be almost ludicrously simple. Merely adopt a reasonable definition of "laborer," liberalize the certificate system, give the Chinese Government a veto on our administrative regulations, treat the Chinese within our borders like citizens of the most-favored nation, let them bring their families, abolish registration, admit coolies to the Philippines and Hawaii—and, presto! our cotton goods will again be worn in the Flowery Kingdom. If only our merchants across the Pacific had power to bind our Government to such a compact, we should smile that such a petty dispute was ever allowed to disturb this country at all. The trouble is, that these are negotiations in which the negotiators on the American side have even less power to speak with authority than if they were our plenipotentiaries drafting an arbitration treaty.

Bebel's affirmation that what is going on in Russia is stirring the German laboring population to its depths, is not to be laughed away by the Government benches. The Prussian Poles not only live alongside their Russian brothers, but speak the same tongue and have the same aspirations. They cannot but be affected by what is going on. Compared with Russia, Germany is, of course, a liberal country; yet the reactionary tendencies of the bureaucracy and the heavy military burdens the country bears, as well as the social unrest which drives so many to emigrate, create a condition of affairs which must make the Emperor watch Russian events most carefully. Some of the liberalizing seed is sure to be wafted across the borders and fall upon fertile ground. Hence it is very uncomfortable to have a truth-teller like Bebel declare that the proletariat, and not the Cabinets, will hereafter decide the questions of war and peace; and that if the country is not made what it should be, the workingmen will not fight to defend it. That is a whip which can be cracked most effectively; moreover, Bebel's prophecies and warnings have an unhappy way of coming true, as witness his utterances against the colonial policy a few years ago. And the worst of it is, he cannot be arrested for treason or be said to have exceeded his Constitutional rights in criticising the Emperor.

THE INCOMING ENGLISH LIBERALS

A comparison of the men with whom the new Liberal Premier replaces the outgoing Balfour Ministry, shows how absurd is the notion that wisdom will die with the latter. Yet this has been the tacit assumption, and sometimes the open assertion, of the Conservatives for several years back. They only were "fit to rule." Occasional mistakes they might, indeed, make—though mighty, they were mortal; but how could the country think with anything but horror of falling into the hands of the inept Liberals? Well, Balfour has at last resigned, and with him goes but one first-class man, Lord Lansdowne; the rest of his Cabinet, as it was left by the secession of Sir Michael Hicks-Beach, the Duke of Devonshire, Lord George Hamilton, Mr. Wyndham, Mr. Ritchie, and Mr. Chamberlain, were all mediocrities or nonentities. Man for man, they will not compare with the Ministers whom Sir Henry Campbell-Bannerman now summons to his assistance. Sir Edward Grey is Lord Lansdowne's equal in charge of foreign affairs; while either John Morley, Mr. Asquith, or Mr. Bryce dwarfs any of the remaining men who went out with Balfour. And this is to say nothing of Sir Henry Fowler or Sir Robert Reid, Mr. Haldane, the Earl of Aberdeen, or Augustine Birrell. So much for the comfortable claim that the Conservative party is alone *capax imperii.*

It is true that the new Liberal Premier does not, in talents, measure up to his predecessors. Sir Henry is far from being the typical Liberal leader. Even five years ago, it was thought impossible that he should ever become Prime Minister. He has few dashing or popular qualities; is not eloquent, not fertile in Parliamentary initiative or party policy; is not eaten up of reforming zeal. Yet it is generally admitted that the Premiership, whether he holds it long or not, is fairly his. Why? Because he stuck by the Liberal party when its fortunes were at the lowest, and, as its leader in the House against a powerful and complacent Government, made a sturdy fight year in and year out. Sir William Harcourt had thrown up the job in disgust; Lord Rosebery would make a brilliant speech and then run away; other Liberals shunned the contest; but the cautious, good-natured, hard-headed, and indomitable Scotchman stood at his post, defending the party through good report and evil report, until at last this very doggedness and unconquerable hope awakened a kind of admiring enthusiasm. The English like a man who will go on taking punishment with smiles and fighting to the end. Sir Henry Campbell-Bannerman's bull-dog tenacity at last began to give him a strong hold upon the British public. Some time last year, we are informed, the Harmsworth newspapers, which had been laughing immoderately at the idea of Sir Henry's ever becoming Premier, caused a quiet canvass of opinion to be made in various parts of the country. The net result was the warning: "It won't do to treat C. B. so disrespectfully. He is getting to be very popular."

Like Mr. Balfour the Liberal Prime Minister proposes to lead the House. For this difficult task he is well fitted by long experience, a good head for business, and, as well, a nice sense of what will and what will not "go" in the Commons. In this latter particular, Mr. Balfour was sometimes deficient. He did not always know how, as Burke said Charles Townshend did, to hit the sentiment of the House between wind and water. Bannerman will seldom fail in that respect; and he will doubtless be able, better than Mr. Balfour, to keep the public business in hand. But it is impossible to think of him as anything but a stop-gap Prime Minister. He may succeed in conciliating for a time the diverse elements of his party; but he is not the man to weld them into a powerful instrument for political reform and national progress. So it is not strange that we hear rumors of his going to the Lords, after a year or two, and turning over the Premiership to a younger man —Sir Edward Grey, it is thought.

These questions of Liberal personnel count for more just now than speculations about Liberal policy. That any party programme will be put forward until after the general election is highly improbable. The new Ministry is not expected to face the present Parliament at all. It will, therefore, have no King's Speech to write until after the new House is chosen. Election addresses will, of course, be made by Liberal candidates, but their burden will be: "Elect us to clear up the mess left by Balfour." Undoubtedly, there will be also a good deal of sharp attack on Mr. Chamberlain. He is now the real head of the Tory party. He has the Conservative organization largely within his control, and is doubtless correct in asserting that he has nine-tenths of the voters. His activity will be great in the canvass; his speeches most quoted; his tariff programme the chief issue. If the Liberals should be beaten, Chamberlain would be the next Prime Minister; the King would ask him to form a Ministry as inevitably as the Queen did Mr. Gladstone in 1880, though he then, like Mr. Chamberlain now, was not the titular leader of his party. And if the Liberals win, as in all human probability they will with ease, Chamberlain, not Balfour, will be the leader of the Opposition, notwithstanding the latter's advertisement to the contrary.

But the formulation of Liberal policy cannot long be delayed, and there are discordant voices. The everlasting Irish question will not down. The Liberals may have an independent majority; there are many indications that they will. Or the Irish may prove unexpectedly reasonable. They have no better or more tried friend than John Morley, and his advice to them is not to insist that Home Rule be the first item in the Liberal programme. Even if an Irish bill passed the House, it would be thrown out in the Lords; and to dissolve on that issue at once, or to break up the Ministry, would be to put off Ireland's hope still further. The Irish National Convention last week declared that Home Rule must be "cardinal" in the Liberal policy. That does not mean that it must come first. There is a difference between cardinals and ordinals. Moreover, the selection of Mr. Bryce as Chief Secretary of Ireland is such a propitiation as could hardly be offered in the person of any other statesman, and promises at least a cessation of the existing petty persecutions so startlingly exposed in these columns recently by our Dublin correspondent.

THE PRESIDENT AS STUDENT.

We learn from the *Sun's* correspondent in Rome that the Pope has ordered a translation of President Roosevelt's messages into Italian. His Holiness, it appears, following the example of Leo XIII., is preparing an encyclical on social problems, and craves the advantage of studying Mr. Roosevelt's authoritative utterances. This is a gratifying recognition of the labors of an American investigator, for the President's messages reveal clearly that he has been an assiduous student of economic and social problems. To review his recommendations to Congress, upon these subjects, since 1901, is to gain fresh admiration for the ardor with which he has pursued his researches in a field that was new to him.

In his first message as President, December 3, 1901, Mr. Roosevelt did little more than state his conviction that we were "face to face with very serious social problems." It is true that, in his usual way of balancing opposites—"there have been abuses, yet it remains true"; "all this is true, and yet it is also true," etc.—he filled a couple of columns with discussion of Trusts and of the regulation of corporations, but his single demand was for publicity of accounts. "Publicity is the only *sure* remedy which we can now invoke." He took notice of the outcry against the railways, and thought the Interstate Commerce act should be amended—though he did not say how—but added the warning: "It must not be forgotten that our railways are the arteries through which the commercial life-blood of this nation flows. Nothing could be more foolish than the enactment of legislation which would unnecessarily interfere with the development and oper-

ation of these commercial agencies." This shows how far a rate-bill was then from having risen upon his horizon.

In his message of 1902, the President was certain that "no more important subject" could come before Congress than "curbing and regulating combinations of capital." He generously left it to the wisdom of Congress to devise "a law reasonable in its provisions and effective in its operation." For himself, he asked only for a special appropriation "for the better enforcement of the anti-Trust law as it now stands." Congress, it will be remembered, promptly gave him that appropriation. It also, through the creation of the Bureau of Corporations, put his one "sure remedy" of publicity within his grasp. And with these steps the President in his message of 1903 appeared to be entirely content. He declared them a "real advance in the direction of doing all that is possible." "The progress has been by evolution, not by revolution. Nothing radical has been done; the action has been both moderate and resolute. Therefore the work will stand." Hence the surprise with which we discover in the message of 1905 that it is "increasingly evident that there will be very insufficient beneficial result" from enforcing anti-Trust legislation; while his "sure remedy" of publicity appears to have also broken in his hand.

Some had drawn the inference from Mr. Roosevelt's absolute silence about railway regulation throughout the Presidential campaign of 1904, that he had ceased to study that subject. But they were undeceived when his December message was published. Though his party platform had ignored the matter altogether, he informed Congress that a grant of power to the Interstate Commerce Commission to make railway rates was "the most important legislative act now needed." Every one knows how he strove to secure such an act last winter, agreeing to throw over tariff reform and suppress his special tariff message to obtain it, but in vain. For present purposes, however, we wish only to show how his study of the problem has been steadily pushed. Because his mind was fully made up in 1904, it does not follow that he is not ready to accept new light in 1905. The best way to mark the progress of his studies is to print the corresponding parts of his messages of 1904 and 1905 in parallel columns:

1904.	1905.
"In my judgment the most important legislative act now needed . . . is this act to confer on the Interstate Commerce Commission the power to revise rates and regulations, the revised rate to *at once* go into effect, and to stay in effect unless and until the court of review reverses it."	"In my judgment . . . some competent administrative body should have the power to decide . . . to prescribe the limit of rate beyond which it shall not be lawful to go—this decision to go into effect *within a reasonable time*, and to obtain from thence onwards, subject to review by the courts."

The President also lays great stress this year upon the point that what he recommends is "not to give the Commission power to initiate or originate rates generally, but to regulate a rate already fixed or originated by the roads." It may be, however, that in time his studies will extend to a decision of the Supreme Court touching upon this attempted distinction. That tribunal held, when passing upon it, that "if power existed, as is claimed, there would be no escape from the conclusion that it would be within the discretion of the Commission, of its own motion, to suggest that all the interstate rates on all the roads of the country were unjust and unreasonable, . . . direct a hearing, and upon such hearing make one general order reaching to every road and covering every rate." A quotation from one of the Commission's reports may also aid the President: "Every case before the Commission, however trivial it may appear, involves in its disposition the formulation of principles under the law which have important bearing upon the business and commerce not only of the immediate locality, but often of the entire country."

Mr. Roosevelt's open-mindedness as a student of economic problems is declared by the *Tribune's* Washington correspondent to have been demonstrated afresh. First, his Commission-made rate was to go into effect "at once"; next, "after a reasonable time"; now, it is stated, the President is ready to agree that it shall not go into effect until after the courts have said it should, provided the railways will give a bond to pay the difference in case the decision goes against them. All this is interesting as showing how eager the President is in quest of light. With other earnest students, he modifies his views from time to time, though they have not his privilege of urgently recommending that each fleeting conviction be enacted into law.

THAT CHASTITY OF HONOR.

Honor was the subject of Joseph H. Choate's story as he spoke at the bankers' dinner last week. The theme was timely, for the heads of two of the largest financial institutions in the world have just resigned in disgrace, and a third is likely to follow. The disclosures in regard to the looting of our great insurance companies have involved not merely the officers and directors of these concerns, not merely shady promoters and the venal politicians who have been leeches upon the bodies of the corporations, but bankers, financiers, and presidents of trust companies who have hitherto stood well in public esteem. This crash of supposedly solid reputations is due to an obvious cause. Men have been unable to resist the temptation to steal when they have seen before them a huge pile of money from which, as they argued, a few hundred thousands or a few millions would never be missed.

The effect of these revelations upon plain people who call "window-dressing" perjury, "legal expenses" bribery, and "adjustment of accounts" embezzlement, is not yet fully understood in Wall Street. Simple-minded farmers, workmen, shopkeepers, and professional men of limited income, in every part of the country, are sending their insurance proxies by the thousand to Thomas W. Lawson of Boston. They know very little about Lawson, but they are sure that he is not James W. Alexander, Richard A. McCurdy, or John A. McCall; and they hear that he professes to be fighting the "Wall Street system." Accordingly they take their chances with him. In fact, matters have come to such a pass that any man who denounces Wall Street loudly enough can summon a respectable following. "The trouble," says your average stock-broker, "is that the plain people are fools." Undeniably these plain people are ignorant of the career of Lawson and his vulnerability. But that is not the radical difficulty. Lawson is formidable because the men whom he attacks—Addicks, for example—have too often been indifferent to the principles of common honesty, and have defied the decencies of civilized life. Skill as financiers they have indubitably possessed. But they have played fast and loose with their own money and that of other people. They have been common gamblers. They have rioted in luxury in our gilded hostelries; they have bought women as recklessly as they have bought wine.

Ability and scrupulous honesty in the management of a fiduciary institution are such elementary requirements that we need not discuss them. But an officer in a trust company, a bank, an insurance company, or any such corporation; must be something more than keen and honest. He must show stability of character in all relations of life. This chastity of honor is the thing which Wall Street has too often made light of. When Charles M. Schwab plunged at Monte Carlo, the men who are used to speculating in stocks and to a hand of poker at the club thought nothing of the performance; but a shiver went down the spine of every small stockholder in Steel. The manager of that vast organization may have known more than any one else about manufacturing and marketing steel, but he lacked character. He was a gambler. That incident was the beginning of the end of Mr. Schwab's connection with the Steel Corporation. When he tossed a coin upon the green baize table he killed public faith in himself as a man.

A week ago Mr. Schwab's successor, William Ellis Corey, issued a statement admitting "irreconcilable differences"

with his wife, but defending the conduct of the other woman in the case, a much-advertised actress. Yet Judge Elbert Henry Gary, chairman of the executive committee of the Steel Corporation, is quoted as saying, "I see no reason why any one should think Mr. Corey will or ought to tender his resignation as president." No reason? If, under the circumstances commonly reported, Mr. Corey prefers another woman to his own wife, his usefulness in a high position of trust is at an end. He is marked as a man in whose character the possession of riches has developed the gravest defects.

"This," reply his defenders, "is a hard saying. You lay upon him a heavy burden. Men in many other walks of life are not cross-questioned as to their habits of eating and drinking, their indulgence in games of chance, their relations with women, their ways of spending their income. They can do as they like with their own money." It *is* a hard saying, but it is true. The private life of a lawyer or a merchant may be as lax as his conscience will allow, because he is answerable only for himself. But a man who takes a position of trust—from a minor clerkship in a bank to the presidency of a Steel Corporation—has deliberately assumed obligations, not only to keep his fingers out of the till, but to carry himself so upright in all his ways that no man can suspect his fidelity. He cannot do as he likes with his own money if he likes to affront the moral sense of the community. And in this point the wisdom of the world is not foolishness. Experience as old as humanity proves that the gambler, the drunkard, and the debauchee, however alert their intellectual faculties, are not in the long run trustworthy. If any fact is writ large in human nature, it is this. Men forget it while they are making money faster than they can spend it. Men forget it when they cut loose from former associates and escape from the social pressure of early environment. Our newly rich, in Wall Street and out, have signally forgotten it in the last decade. But the law is still immutable.

A LEGISLATIVE CLEARING-HOUSE.

It is related that once, when an important Congressional committee was giving hearings on some bill, an unknown man rose and asked the privilege of being heard. "What interest do you represent?" asked the chairman. "No interest at all," was the answer; "I want to speak for the public." The request was so extraordinary that it naturally elicited a roar of laughter, but the story illustrates the extent to which our legislative bodies are accustomed to rely for their information upon persons directly interested, one way or the other, in proposed legislation.

The lobbyist's power does not depend merely on the money he spends or the material favors he is able to bestow on members. His superior grasp of the questions up for consideration, his marshalling of the facts which support his own side when no one has ready those on the other, make his influence often strong over the best-intentioned legislator. When there are such interested experts opposed to each other, the resultant of their claims may be wise and moderate enactments; but when only an unorganized and unrepresented public is opposed to them, we have the great mass of special-privilege legislation. Meanwhile, the several States, which have the best opportunity in the world for watching each other's experiments, have, in fact, neither profited by successes, nor been warned by failures beyond their own borders.

How to remedy this condition of affairs has long been a practical question. In some respects New York has taken the lead in providing the material for intelligent legislation. The annual summaries of State enactments issued at Albany are known all over the country. But such a legislative library as ours is a thing of slow growth. In the *Review of Reviews* this month Prof. John R. Commons describes the simpler system which has been employed in Wisconsin during the past three years for supplying needed information to the Legislature while in session.

"A legislative clipping bureau" is what Professor Commons calls this adjunct. Its functions can best be described by quoting from the circular sent out to all Senators and Assemblymen in advance of the last session by Dr. Charles McCarthy, the "legislative reference librarian":

> "If you will inform us of any subjects you wish to investigate," it says, "as far as we have the material, time, and means, we will tell you—
>
> "(1.) What States have passed laws on any particular subject.
>
> "(2.) Where bills for similar laws are under discussion.
>
> "(3.) What bills on any subject have been recently introduced in our Legislature.
>
> "(4.) Where valuable discussions of any subject may be obtained.
>
> "As far as possible, with our limited force and means, we will send you abstracts of useful material, and answer any questions pertaining to legislative matters. It is not our province to convince members of the Legislature upon disputed points. We shall simply aid them to get material to study subjects in which they are interested as public officials."

The information furnished to members is timely, and it is already digested; in these two qualities lies its peculiar value. By arrangement with some of the State newspapers, "exchanges" from all parts of the country are placed at the disposal of the reference room. As the session advances, the telegraph is used extensively to obtain in the shortest possible time such specific facts as may be wanted by members—as, for instance, to verify statements contained in testimony given before committees. While the most effective service is necessarily given on questions which have long been pending, the authors of "brand-new" schemes of political regeneration can likewise be shown what other minds have worked out along the same lines. How far the plan has proved a discouragement of "freak" legislation we do not know, but this should be one of its important functions.

The average legislator, East or West, is not an habitual user of libraries. He is rather impatient of getting up a topic unless he has an accomplished secretary to do it for him. This is where the Wisconsin plan seems especially practical. The Senator's request for data on such and such a topic will bring him, say, a dozen newspaper clippings from various parts of the country, a report issued in Massachusetts, some legislative testimony from Oregon, typewritten extracts from the latest standard books on the subject—the books themselves he can read later if he is still interested—and, perhaps, some letters from unofficial sources describing the working of the statutes passed elsewhere. Not a sentence is included that is not strictly germane.

Doubtless the member who depends on this service alone, will never attain real mastery of the political questions before him, but the equipment which he does obtain is, in the majority of cases, a clear gain to the State. In Wisconsin the non-partisan character of the work has been secured by placing it under the unpaid and non-political Free Library Commission. The entire annual cost is but $4,500, and so little is the department burdened by outworn or unnecessary material that, although its entire equipment was destroyed by fire in 1903, it has already recovered its efficiency. The members of the Wisconsin Legislature declare they would not do without it on any terms, while several other States, California and Maryland among them, we believe, have already established bureaus on the same pattern. As these will be able to help each other, this should mean still more effective work in the future.

MARK TWAIN AT SEVENTY.

The most significant thing about the dinner to Mark Twain on December 5 was the greeting from forty of the leading men of letters of England. No other American author, we are confident, could receive such a tribute. In the opinion of foreigners, Mark Twain is the greatest of living American writers. An interesting side-light is thrown on his fame by an incident in Kipling's first visit to America, some fifteen years ago. Mark Twain was the man of whom Kipling had heard, and whom, above others, he wished to see. In the interval since then his reputation has grown,

both at home and abroad. Bret Harte, whose name was often coupled with his, is dead. No one is left to dispute his preëminence, or even to compare with him.

He did not, however, come into his own at once. People were suspicious of him because he was not born and bred to the literary traditions of Boston, New York, or Philadelphia. Nor did he, when at last he had fairly started on his career, accept the conventions of his generation and conform to the standards of either of these three centres of culture. He was not reared with Hawthorne, Lowell, Longfellow, and Holmes; and consequently New England pitied him. He never attended the so-called "Knickerbocker School"; and New York saw at once that he suffered much from lack of early advantages. True, his essays and sketches used to appear in the staid pages of the *Atlantic*, but they were a horrible shock to the dowager duchesses of Boston. The *Atlantic*, however, was erratic. It not only tolerated Mark Twain, but for a time it was edited by a man named Thomas Bailey Aldrich, who had not graduated from Harvard, indeed had never attended college, and who was therefore not a member of the Brahmin caste. These literary pariahs, however, occasionally get on in spite of deficiencies in taste and education. Mr. Aldrich, for example, managed to write some things that people have condescended to read. Indeed, one of his stories, "Marjorie Daw," so took the fancy of a budding author that, changing the name of the personages of the tale, he kindly offered to sell it to the *Evening Post*. What is worth stealing must have some merit. Mark Twain's success has been more dazzling than Mr. Aldrich's—and with good reason.

He knows America and knows it whole. Born in Missouri seventy years ago, he saw every type of man, woman, and child, white and black, that lived in the vast Mississippi Valley. As pilot on a Mississippi steamboat he made the acquaintance of the pioneers from New England, New York, Pennsylvania, and the Western Reserve, who pushed across the prairies and filled the vacant lands of Illinois, Iowa, Wisconsin, Minnesota, Nebraska, and Kansas. He was scarcely less at home in the Gulf States, for which the Mississippi was the great highway. As Territorial secretary of Nevada and editor of the Virginia City *Enterprise*, he knew at first hand the mining camps of the Pacific Coast, the gamblers, the railway builders, and the politicians. He has dwelt for many years in the East. He has travelled extensively. He has read widely. With some native talent to start with, he has in the slow course of time picked up almost as good an equipment for literary work as a man will get in four years at Harvard or Columbia.

He has not devoted himself to carving cherry-stones according to academic rules, but to the best of his ability he has written books to read. Delicate questions of usage have not troubled him any more than they troubled Shakspere or Defoe; he has had larger problems on his mind. We do not, we trust, undervalue choice, exact, and even academic English. A careless, sloppy style is not virtue. Misusing words and taking the edge off their meaning is the favorite amusement of fools. But Mark Twain has had stories to tell—big ones and good ones. His swift, racy style—words of the people as the people understand them—smelling of the soil, is as excellent in its kind as the classic sentences of Hawthorne. In 'Huckleberry Finn' and 'Tom Sawyer' he had matter enough to last an ordinary novelist a lifetime. That, after all, is the essential. The manner, we admit, is not that of the late Walter Pater in 'Marius the Epicurean.' It is—if the two writers be at all commensurable—far better.

Yet it is the bulk of Mark Twain's work, rather than the admirable handling of details, that gives it power. To say nothing of his ventures into historical romance—he has shown us on an extensive scale surpassingly vivid pictures of many phases of our life. "Here," cry his European eulogists, "is America as it is or was." They are right. 'Huckleberry Finn" is a cross-section of Missouri and lower Illinois. You may rise from the perusal, feeling that you have actually lived there, that you know intimately a whole social stratum of antebellum days, and that you have enjoyed one of the most entertaining and moving tales in our language. The episode of that feud between the Grangerfords and the Shepherdsons, with the men running along the river-bank, shooting at the swimming boys, and shouting "Kill them! kill them!" grips the memory like those stirring scenes where Crusoe came upon the footprints of the savages and the outlaws stormed the castle of Front de Bœuf.

In saying this we mean that Mark Twain is a much greater man than the humorist of 'The Jumping Frog.' That he is a humorist of the first rank no discriminating person has dreamed of denying for the last thirty years. But he is a humanist as well, if we accept the term in its broader sense—one versed in human affairs. His humor has served to keep clear and steady his vision of human relations, has helped him to pierce the sophistries of politicians, and to test the fleeting fashions of a day by eternal principles, has closed his ears to the passing cries of party, and enabled him to stand with courage, and to lift a voice that carries far, for justice and mercy to all men, of all colors, in all lands.

WILLIAM LLOYD GARRISON.

The man who, by common consent, personifies the purely moral anti-slavery agitation leading up to the Civil War, and the centenary of whose birth was widely celebrated on Sunday last, is no subject for subtle analysis. His emotions, impulses, mental operations were direct, his action frank and open, his zeal absolutely unselfish and uncalculating, his persistence measured not by the hopefulness of his cause, but by the accomplished fact of emancipation. The arts of management and intrigue were foreign to him, the resort to any but peaceful and persuasive methods abhorrent. He opposed to the tender mercies of the slaveholder a world-wide benevolence and the non-resistant spirit of a martyr. He drew adherents to himself by the warmth and fire of his convictions, but also by the transparent ingenuousness of his moral nature. No more child-like reformer ever brought down upon his devoted head the mob cries of madman, fanatic, infidel, incendiary, insurrectionist, traitor to his country.

The positive traits which redeemed from obscurity a humanitarian youth of humble birth and needy circumstances, were first an almost haughty self-reliance.

"As to the political course of the [Newburyport] *Free Press*," his first venture, in his twenty-first year, he said in his salutatory, "it shall be, in the widest extent of the term, *independent*. . . . Its principles shall be open, magnanimous, and free. It shall be subservient to no party or body of men; and neither the craven fear of loss, nor the threats of the disappointed, nor the influence of power, shall ever awe one single opinion into silence. Honest and fair discussion it will court; and its columns will be open to all temperate and intelligent communications, emanating from whatever political source. In fine, he [the editor-publisher] will say with Cicero: 'Reason shall prevail with him more than public opinion.' "

This motto he placed at the head of the campaign *Journal of the Times*, edited in 1828-9 at Bennington, on behalf of the Vermont supporters of John Quincy Adams's reëlection. And again he declared: "In the first place, the *Journal* shall be INDEPENDENT, in the broadest and stoutest signification of the term; it shall be trammelled by no interest, biassed by no sect, awed by no power." In January, 1831, he thus gave notice in the salutatory to his *Liberator*—a standard of emancipation lifted up "within sight of Bunker Hill and in the birthplace of liberty": "I shall not array myself as the political partisan of any man. In defending the great cause of human rights, I wish to derive the assistance of all religions and of all parties." And a few months later: "The public shall not be imposed upon, and men and things shall be called by their right names. I retract nothing—I blot out nothing. My language is exactly such as suits me; it will displease many, I know—to displease them is my intention. Here I must advertise, that further advice will be considered intrusive. I do not want it." And again, at twenty-nine, still more eloquently, in a burst of impatience:

"There are many calling themselves anti-slavery men who, because they are only 'half-fledged' themselves, and have neither the strength nor the courage to soar, must needs flutter and scream because my spirit will not stoop in its flight heavenward, and come down to their filthy nest. It has gone, it is going, upward with a strong and steady

wing, and it shall neither sink nor rest until it reach an eternal dwelling-place."

In such glowing and erect passages stand out, as unmistakably as in any ever penned,

> "la schiva anima, e il retto
> Non domabile ingegno, e l'ira e il forte
> Spregio pe' vili, e la parola franca."

The next trait was marked originality in policy and methods. Garrison did not invent the doctrine of immediate emancipation, but he first breathed into it the breath of life. He founded the first militant journal under that sign, the first anti-slavery organizations, State and national, to plant the banner on the breastworks of the Slave Power. He was the first publicly to convene and address the despised free people of color with words of cheer and rallying; the first "with whom"—as his action was scornfully interpreted by a leading Northern divine of the day—"it seems an object worth ambition to lead the free people of color and to receive the homage of their applause." He was the author of the doctrine of "No Union with Slaveholders," which supplied the missing plate in the crusader's armor. It completed the antithesis to the Slave Power ever threatening disunion; it furnished a touchstone to every political organization pretending to find support of the existing Union compatible with pure anti-slavery professions; as a self-denying ordinance against voting or taking office under a pro-slavery Constitution, it demonstrated the disinterestedness of the Garrisonian abolitionists; above all, it divested that body of reformers of the last shred of responsibility for slavery. It was complemented by the as often misquoted as censured Scriptural definition of the ante-bellum Constitution as "a covenant with death and an agreement with hell"—Mr. Garrison's own selection from his favorite moral arsenal.

He was, if not the first to discern the Colonization Society's pro-slavery affinity and alliance—the free colored people of the North had anticipated him—the one who shattered it at a blow in a pamphlet deriving its chief weight from quotations from the Society's own reports: "Out of thine own mouth will I condemn thee." In keeping with this was the standing department in the *Liberator* known as "The Refuge of Oppression," into which he was satisfied to gather without other refutation than the damnatory label whatever the enemies of the cause uttered in their own behalf or in defamation of the abolitionists. "The establishment of that Museum," wrote Edmund Quincy, "we believe was a strictly original idea with Mr. Garrison. We apprehend that he was the first man who ever set up for show the caricatures which were made of himself, and the stones and dirt with which he had been pelted; and who kept on hand a gibbet on which anybody that pleased might hang him in effigy."

Power of expression was nature's genius gift to this graduate of the grammar school and the printing-office. As a writer, remarkable for his precocious maturity of style, and as a speaker, he had a vigor consonant with his leadership. He had a just sense of the weight of phraseology, and a scrupulous regard for fitness of epithet. His language was never unmeasured; in the salutatory to the *Liberator*, he disposed of the charge that it was harsh and was retarding his propaganda. "I *will be*," he maintained, "as harsh as truth, and as uncompromising as justice." In an equally impassioned period, three years later, he sums up in self-justification the amazing progress of the agitation he had set in motion, concluding that "Greater success than I have had, no man could reasonably desire, or humbly expect. Greater success no man could obtain, peradventure, without endangering his reliance upon an almighty arm." Passing in felicitous review the manner of writing of his leading associates, from Whittier to Birney, he pertinently asks, "Of the foregoing list, who is viewed with complacency, or preferred over another, by slaveholders or their apologists? . . . As soon as any man becomes hostile to colonization and friendly to abolition, is he not at once recognized and stamped by the enemy as a *Garrisonite?*" And later he could ask what the sophistical whitewashing of the Constitution by the political anti-slavery wing availed them in propitiating the Slave Power more than his own blunt Old-Testament metaphoric "covenant with death and agreement with hell."

By the apposite choice of a word he differentiated from all preceding and succeeding peace societies the "Non-resistance Society," founded mainly by him in 1838. The adjective he insisted on was a creed, and allowed no room for half-way adjustment to a society resting on force. His originality was here again apparent, as was his independence in repelling attempted sectarian control of his movement. In this controversy, which split his ranks in two, he became quite unconsciously a pioneer in the cause of woman's equality, which he promoted to the fullest extent, memorably at the London World's Anti-Slavery Convention in 1840, when the exclusion (partly engineered from America) of his female co-delegates determined him to refuse a seat in that body, though after Clarkson he was the most distinguished member. It was his lot to link the philanthropy of Great Britain and the United States in the closest ties for the abolition of slavery, and to achieve a popular recognition across the water which was denied him in his native land. After the Civil War, in which the relations of England and the United States had been perilously strained, Garrison more naturally than any American could be received in England as a mediator. At the breakfast given to him in London in 1867, the Duke of Argyll so accepted him, in words which may properly close this necessarily restricted estimate:

> "Let us remember with joy and thankfulness that only a few years ago the present reception could not have been given to Mr. Garrison. He was not then the representative of a people, of a country, or of a government. He was the representative only of a party in the United States. . . . Now, thank God, Mr. Garrison appears before us as the representative of the United States; freedom is now the policy of the Government and the assured policy of the country, and we can to-day accept and welcome Mr. Garrison not merely as the liberator of the slaves, but as the representative also of the American Government. . . . On the ground of the Cause of which he was the great champion, of the peculiar service which he has rendered to that cause, and of the People whom he represents, we desire to give Mr. Garrison a hearty welcome."

THE POLITICAL SITUATION IN ENGLAND.

LONDON, November 28, 1905.

The present state of affairs is noteworthy. It presents one feature of immediate interest and another feature of permanent importance.

The immediate interest of the situation lies in the revelation to the whole world of a fact which has long been perceived by every careful observer. Each of the great political parties is a house divided against itself. The fiscal question has split Unionists into two opposed bodies, which, unless loyalty to the Union triumphs over every other sentiment, may any day become hostile camps. Mr. Balfour's well-meant attempt to minimize essential differences has, as such endeavors are apt to do, widened the breach which it was meant to close. Mr. Chamberlain has insisted upon the necessity of a policy which every Free Trader must identify with Protection. It is likely enough that the rumors of the Cabinet's intended resignation were not put in circulation by any Unionist leader. They may well be nothing else than the predictions of journalists whose prophecies take the form of assertion. But then, shrewd critics base their forecast of the future on the effects naturally to be expected from the known circumstances of the time. The Cabinet may either resign office or advise a dissolution of Parliament; but few observers doubt, or at any rate doubted till a day or two ago, that either course would terminate the existence of the present Government. The weakness of the Ministry is the more remarkable for two reasons. It has not been brought about by any personal hostility between the two men who at the present minute guide, in Parliament at least, the policy of the Unionists. Mr. Balfour and Mr. Chamberlain have on every suitable occasion used expressions of mutual esteem, not to say affection. It would be mere cynicism to suppose that these avowals of friendship were but expressions of diplomatic or political hypocrisy. English gentlemen, even when engaged in public affairs, generally speak the truth.

Personal ill-will has had little to do with bringing about a political crisis. Nor, again, is there any reason to suppose that the electors of Great Britain have become Home Rulers. The obvious and the undeniable cause of discord among Unionists is the existence of the fiscal question. The policy of Free Trade and the policy of Protection do not admit of reconciliation. Logic, in the long run, rules the world. The difficulty of combined action among large bodies of men is at bottom caused by fundamental differences of opinion. Free Traders attribute a great deal too much to the errors and the rashness, grave though they may be, of Mr. Chamberlain. The opponents of Protection would much strengthen their own cause if they freely admitted that Mr. Chamberlain is not wanting in a certain kind of insight. A policy which every Free Trader would call Protection does undoubtedly commend itself to a larger number of Englishmen than any one supposed ten years ago. Mr. Chamberlain has underrated the determination of the electors to adhere to the policy identified with the repeal of the Corn Laws; but critics who, like the present writer, do not share Mr. Cham-

berlain's economical ideas, ought to concede that he is justified in the belief that these ideas are in one shape or another popular among a considerable number of electors. However this may be, a distinct and very intelligible division of opinion among the supporters of the Ministry threatens to bring about the fall of the Government.

But then, the last few days have made patent a fact which intelligent critics have long suspected, that irreconcilable differences of opinion divide the Opposition. The question of Home Rule can no more be shirked in 1905 than in 1886. Men who seem prepared to assume at any moment the responsibilities of government, are at variance as to their Irish policy. They are less agreed as to the attitude to be taken up towards Home Rule than they were in 1893. The ostensible leader of the party has hoisted the Home Rule flag. Lord Rosebery, who was the last Liberal Prime Minister, has declared that this is a flag under which he will never serve. Attempts are made to explain away a vital difference. Though Lord Rosebery has contradicted Sir Henry Campbell-Bannerman, Sir H. Campbell-Bannerman, we are told, has not yet contradicted Lord Rosebery. The rash Earl—that *enfant terrible* of the Opposition—has raised a question, it is suggested, which need not be answered till the day after to-morrow—that is, we presume, till the end of the next Parliament, or, say, till 1912. All these apologies or explanations are futile. The issue between the two leaders of the Opposition is plainly joined: they may each or either of them try to withdraw their dispute from the verdict of the country. This will avail them nothing. The electors may be dullards, but they are not fools. They know, and will be reminded, that the greater part of the Opposition are bent not on the production of a Home Rule bill, but on a far more dangerous experiment, namely, the carrying through of a policy of Home Rule, and that to this policy a minority, but a minority containing the most influential members of the so-called Liberal party, is opposed.

The difference, moreover, between the followers of Sir Henry Campbell-Bannerman and of Lord Rosebery does not concern any speculative inquiry; it touches a matter which, from the moment the Opposition enters into office, will become the question of the day. Is the law of the land, including in that term the provisions of the Crimes Act, to be enforced in Ireland as vigorously as the law of the land is enforced in Great Britain? On the answer to this inquiry depends the whole Irish policy of the Government, and the safety of every Irishman who is loyal to the Union. It is a question which will require an instant, a decided, and an unmistakable answer. Every one, moreover, knows that, in his denunciation of Home Rule, Lord Rosebery represents the will of the nation. The predominant partner has not turned Home Ruler, though he has remained a Free Trader.

Lord Rosebery's insight surpasses his firmness. He may conceivably explain away language which admits of but one interpretation; but retraction itself will, at the present moment, avail nothing. It may deeply injure his own reputation, it will not affect the public. His spoken words and the words of Sir Henry Campbell-Bannerman will live. Unionists now know that a vote for a supporter of Sir H. Campbell-Bannerman will be a vote for Home Rule. They know, too, that some of the ablest members of the Opposition will not fight for Home Rule. Many Unionists are convinced that neither the supporters of the existing Ministry nor the majority of the Opposition fairly represent the whole will of the nation. This is the fact which complicates and confuses the whole political situation. The matter of immediate interest is to observe the result of this confusion, and to ascertain whether there be any statesman or body of statesmen who, by putting an end to a false position, can save the country from grave and pressing dangers.

The permanent importance of a peculiar state of affairs lies in the proof that the system of government existing in modern England has for the moment broken down. Every one admits that one object of a popular government is that the policy and the legislation of the country shall in the main and in the long run be in conformity with the will or the judgment of the electors. But an impartial observer must admit the possibility, many would say the high probability, that the majority of the electors of the United Kingdom wish to maintain both a policy of Free Trade and the existing legislative union between Great Britain and Ireland. Of course, Chamberlainites believe that the country has become wearied of "Free Trade," at any rate as that term was understood sixty years ago. Of course, Sir Henry Campbell-Bannerman and his followers believe that the country has come round, or is coming round, to the policy of Home Rule. A newspaper correspondent has no claim to infallibility. Either Mr. Chamberlain or the official leader of the Opposition may be right; one thing, however, is past dispute. If, as is possible, the true wish of the country is to support at once freedom of trade and the union with Ireland, it is absolutely impossible, as things now stand, for the electorate to give expression at the next general election to the true wishes of the country. A vote for the Opposition may secure Free Trade, but it will endanger the Union, and sanction, at any rate, a policy leading towards Home Rule. A vote in favor of the Government—or, for that matter, in favor of Mr. Chamberlain—will be the condemnation of any tampering with the Act of Union, but may sanction a policy of Protection.

Nor is this all. The ambiguity of the situation may prevent the result of a general election from having any decisive effect or any conclusive moral authority. Assume that the vote of the people goes in favor of the Opposition. Who will dare to give to this vote a clear interpretation? There is at least the risk that a vote in favor of Free Trade may be misinterpreted as a vote in favor of a policy leading to Home Rule. The perplexities of the time are increased by an effect of our present mode of voting, which, if my memory does not deceive me, was anticipated neither by the opponents nor by the advocates of vote by ballot. Secret voting has taken from a general election more than half its instructiveness. No one can now say for certain who are the men whose votes have brought about a change of government. No one, therefore, can assert with confidence what were the motives by which the voters were influenced. When, in 1841, Peel returned to office, every one could tell the extent to which Whigs had been converted to Conservatism. If the present Opposition obtains a majority, no one can tell with any accuracy to what extent, if at all, Unionists have been converted to Home Rule.

Every form of government has its own peculiar weaknesses. The special defects of democracy are increased tenfold when the desires of the sovereign people are pronounced in a form which renders it uncertain what it is that the sovereign desires. If the *vox populi* has to be treated as the *vox Dei*, it is common prudence to arrange that the political deity shall utter its will not in dubious oracles, but in unmistakably plain language. In public affairs, and especially in the present state of the world, hesitation and uncertainty may well lead a great nation to ruin. England is suffering from what has been called the paralysis of the Constitution, which may equally well be termed the breakdown of party government. This malady of popular government is not confined to England. One of the difficulties of the day is that neither men of thought nor men of action have yet discovered the cure for a dangerous disease.

AN OBSERVER.

AN EPISODE IN THE LONDON THEATRE.

LONDON, November 24, 1905.

Whatever else in London may languish, interest in the theatre never dies. The theatre itself may be at the last ebb, bound, financially, to the bankruptcy court, but the hold the subject has upon the public mind, apparently, never relaxes. The papers, especially the dull Sunday papers, fill pages with it and its affairs, when they can spare only a column or so for literature, and less for art. Speculators keep on building new theatres when the old ones are said not to pay their way. Excitements come and go, the fad of yesterday is forgotten to-day, but some one has only to whisper a suggestion as to the necessity of a national theatre, and the floodgates of debating-club and newspaper correspondence eloquence are opened upon a defenceless world. In a word, in England, the influence of the drama is to make every one connected with it, no matter how remotely, as hysterical as its average interpreter on the English stage.

I suppose it is a result of all this unnatural and exaggerated interest that so much unnecessary and uninterrupted attention has been bestowed upon the question of reform in the theatre. It is true the Englishman is never so happy as when he is ostentatiously reforming something—anything so long as it is not himself. He can, however, at intervals leave art to work out its own salvation. He can even loosen his reforming grasp on politics for a while. But nothing would persuade him to retreat from the burning deck of the theatre as long as there is a chance of loud and exemplary talk about the ennobling of the stage and the elevation of its ethics. And so in London, within not so many years, we have seen Independent Theatres and Elizabethan Stage Societies;

we have had little noisily-advertised groups of the Illuminated busy with Ibsen and with Maeterlinck, and soaring Stage Societies, and puffed Dramatic Schools; we have been edified by self-appointed and ponderously-conscious-of-the-fact missionaries offering their morals to the mummer. And all the time, as a ceaseless refrain to the outbursts of irresponsible chatter about the seriousness of the drama and the duty of the dramatist, we have had to listen to the same old sermon upon the importance of a national theatre. And what has come of all this? Nothing, absolutely nothing—or worse than nothing. For the tendency has been to make of the theatre a Temple of Moralists, and of the stage their pulpit. And the curious thing is—though, as yet, the fact has not been sufficiently recognized—that the most hopeful sign of reform there has been comes, as it should, from a purely business enterprise—a theatre run on business lines, not for the ethical conversion or elevation of mankind, but for honest money-making. I mean, the little Court Theatre, the home of farce, as I first knew it, in Sloane Square. For the work it has done and is doing, I think it deserves recognition, especially at the present moment, before it is too late. For, even as I write my word of praise, I seem to see, slowly forcing itself in, the thin end of the wedge, the kind of popularity that in England leads to artistic ruin if to financial success. But let me explain.

I began to go to the Court Theatre after one of my regular seasons of not going to the theatre in London at all. I was delighted. I saw plays that had the rare charm of being interesting, and the rarer merit of being well done. I thought, Perhaps I am prejudiced; perhaps it is because I have seen nothing for so long that anything would please me. Therefore, conscientiously, I have made the rounds of the principal London theatres. I have learned for myself, and not from the official critics, what is going on in them. And what have I found all London crowding to applaud? I leave out the musical comedies that have no relation to the drama whatever. I do not know whether I should not leave out also the triumph at His Majesty's of Mr. Tree, in one of the make-ups the ingenuity of which is the secret of his reputation, turning 'Oliver Twist' into melodrama; and the triumph at Drury Lane of Mr. George Alexander, with the help of a flock of sheep, some odd ponies, and a dog, turning the tiresome melodrama of Mr. Hall Caine into the manner of spectacle expected of Drury Lane. But if I do omit these things, there seems to me uncommonly little to write about: English actors struggling with German sentiment over a German problem in 'Lights Out'; pit and gallery being initiated into the doings of the "Smart Set"—odious and silly term—into their dancing of cake-walks, their playing of bridge, their toadying to millionaires, in a comedy of old conventions in new dress, supposed to be a comedy of manners like "The Walls of Jericho," so successful as to be just coming to an end after a run of over a year; light farces, of which the best that can be said is that they do not pretend to do more than raise a laugh, and, even if the laugh does not come easily, one is grateful for the kindness and good sense of the intention. When the attraction is not in the spectacle, in the glitter of German uniform, in the glamour of polite ball- and drawing-rooms, it is in the names of one or two special favorites in the list of actors and actresses. Mr. Pinero and Mr. Jones may, for the time, have retired in favor of Mr. Barrie and Mr. Sutro. It makes small difference. The play, whoever the author, is usually a peg to hang the essentials on—the essentials, that is, with the British public; and the art of the actors, the art of actors acting together, is evidently looked upon as old-fashioned, as out of date, like the Mouth of Hell in the mystery play or the use of masks on the Greek stage.

At the Court Theatre, however, under the present management of Mr. Vedrenne and Mr. Granville Barker, himself an actor and a playwright, there is, in the first place, the effort to present plays that are interesting as plays, not as spectacles or marvels of mechanical stage-setting, not as excuses for ingenious costumes and Paris fashion models, not for the parading and posing of actor-managers and notorious beauties. The one appeal made is dramatic. I do not say that this appeal is always successful; only that it is always legitimate. And it is made with a variety unusual, as it is refreshing, in these days of long runs. The venture was begun not much more than a year ago; for a time, the performances were limited to a few afternoons in the week. And yet there have been presented Greek tragedies and mediæval moralities, Ibsen's plays, Mr. George Bernard Shaw's plays, plays by new and untried authors. Already, this autumn, Mr. Hankin, hitherto unknown to me, certainly has made the beginning of his reputation with "The Return of the Prodigal," and Mr. Granville Barker has shown real dramatic insight in "The Voysey Inheritance," which, for all its echoes of Ibsen and Shaw, has the right stuff in it, and is the freshest and most interesting English play I have seen for years. This, surely, if the theatre were to close, or degenerate, to-morrow, would be an admirable record.

But what strikes me still more is the excellence of the stage management. No dramatic school can do for the actor what is being done for him here in the way of experience and practice. It is a stage on which the "star" would not have a chance. It is extraordinary, things being as they are in London, how few of the actors and actresses who appear, or have appeared, are actors and actresses with names already made or already popular. You cast your eye down the playbill, and, unless you are at home at the Court, you recognize hardly one of the performers. But they have all, down to the most insignificant, been drilled into the truth, so cheerfully ignored on the ordinary London stage, that the business of the actor is to act, not to strut and rant and pose and shriek; that in the action and relation of a group of actors on the stage unity is as indispensable as in the various parts that make up the whole in the painter's composition. In London, the cry of the reformers has always been—The play, the good play, is what we need! But the best play, when trusted to incompetent players, is sure to fail—artistically anyway; while the poor play may be transformed into a masterpiece by competent performers. Actors, good actors, are what are needed, above all, on the London stage; and the performances at the Court have impressed me with this truth more than ever. I have not so far seen there a man, or a woman, whom I thought a supreme artist, a genius. But most of the company are extremely able, and they have learned how to present a play as if they belonged to it, as if they were all in the picture.

Of the difference this makes, I can give a practical instance. In the old days—some ten or fifteen years ago—like most people, I went through my Ibsen phase. A play by Ibsen could not be put on the stage by the little esoteric companies then vowed to the production of Ibsen in the United Kingdom, that I did not go to see it. "Ghosts," "Rosmersholm," "The Doll's House," "Hedda Gabler," "The Master Builder," "The Lady from the Sea," I saw them all; with the result that I developed such a distaste for Ibsen that I never wanted to see him again. For his interpreters, one after the other, forgot that he was a dramatist, remembered only that he was a preacher, and looked upon themselves as missionaries sent out to spread his gospel. No matter what the part they played, they were filled with a sense of their own virtue, which they proceeded to force upon their audience, to ram down that audience's throat, until I, for one, could stand it no longer. Ibsen, in their hands, became a bore, and, moreover, a bore one could not forgive for the havoc he was playing with the career of so many promising actors and actresses. The fact is, Ibsen has done more harm in his day to the English stage than all the trashiest writers of trashy melodrama and trashy farce who were his contemporaries. It was therefore with reluctance I was induced to go and see last month "The Wild Duck" at the Court Theatre. It is one of the plays that offer the best opportunity to the Ibsenite—full of a mysticism that does not enter into the scheme of everyday life, I should say, out of Norway, and therefore full of possibilities as a text for the real Ibsen sermon as preached by the English Ibsenite. But the actors at the Court played it, as they play any other drama that comes their way, intelligently, simply, and I should like to add earnestly, if that were not a word so horribly misused and abused by the Ibsenite. They were neither overpowered by the sanctity of their mission, nor overawed by their own virtue. On the contrary, they appeared to be not in the least conscious of mission, or virtue, or themselves, and so helped the audience to forget they were anything save the characters they were there to represent. And, for the first time on the English stage, I saw a play by Ibsen when I could feel, as I do in reading him, that he is essentially a dramatist.

The play is too well known for me to undertake to explain the plot. But what its presentment on this stage showed me was the commonplace family of Ibsen's imagining, going about their commonplace life; tinged with sentiment, indulging in fancies, it may be, that are not of the same quality as our sentiments and fancies, but quite comprehensible; and of a sudden, a tragedy made of it all by the meddling of a madman—the dangerous madman not mad enough

to be locked up. And the commonplace had just the right touch of romance in the handling of it, and the tragedy was the more poignant because of the very ordinary everyday men and women involved in it. There was no more suggestion of a sermon, of a lesson, of a moral, than in one's own commonplace affairs and tragedies. If the same company would give the whole series of Ibsen's plays, I think it would leave the British public—or as much of it as cares—with a very different idea of Ibsen as a maker of plays.

After saying so much in praise, I must point out the danger that I think threatens the enterprise—a danger more serious in this country than anywhere else. What the real Briton truly loves is something he knows, something he is accustomed to, something he has been repeatedly assured is correct. He is a conservative by nature, and is as shy of a new joke as of wearing a straw hat with his frock coat. Once, however, he gets used to the joke, he does not want to hear any other. It is the same with him in the theatre. He hates a play on unfamiliar lines; but, once he has endured it long enough for the unfamiliar to grow familiar, then he wants nothing else. Now it happened that one of the first great successes made by Mr. Vedrenne and Mr. Barker was in their presentment of a play by Mr. George Bernard Shaw, "John Bull's Other Island." Mr. Shaw's plays had been tried on the English stage before, they had been published, they had been much written about, especially by himself. Of recent years, two or three had had a run, if a very short one. But it was only with the performance of "John Bull's Other Island" that he was really successful as success goes in the theatre. And he deserved to be successful. The play is immensely clever, as everybody by this time knows; there is as little necessity to tell its story as in the case of Ibsen's "Wild Duck." Its plot anyway, if it may be said to have one, amounts to nothing; dramatically it is weak, it even condescends to the expected concessions to what is supposed to be the Celtic temperament now so much heard of. But it is brilliant in dialogue, it has humor, it is gay and irresponsible, it is full of shrewd observation and criticism of the political problems and relations of the moment. It was this political side of it that carried the whole play, a good deal of which otherwise is unintelligible to an English audience. But people interested in politics came to see it. Politicians came, and returned. There was a rumor that Mr. Balfour had been seen there several times and had laughed. Royalty, too, patronized it, and royalty, too, managed to laugh. And Mr. Shaw, of a sudden, became the popular dramatist there is no earthly reason why he should not have been ten or twelve years ago.

And the consequence? The Court Theatre now cannot have too much of Mr. Shaw. His old plays have been revived, his new plays are being brought out one after the other. And here is the danger. For, because "John Bull's Other Island" is a fine, humorous piece of work, it does not follow that everything Mr. Shaw does is good, though by this time the public is more than ready to take him at his own valuation. But his "Candida," for example, to-day seems little more than a feeble imitation of Ibsen—Ibsen as understood and rendered by the early Ibsenites. His "Man and Superman," the run of which has had to be extended, is the tiresome exercise in egotism of a man who likes to fool and mystify the public, and see just how much the public will stand from him. Mr. Shaw has never hesitated to talk about himself, in print, on the platform, or on the stage; he would be—he has been—the last man to deny the uses of self-advertisement. And so it is in keeping that he should now figure as the hero of his own play, and that Mr. Granville Barker, who takes the part, has what seems to me the bad taste to get himself to look like Mr. Shaw. This savors of farce rather than comedy; it is a jest that may pall when one does not happen to be Mr. Shaw.

Worse than this. Now he is taken seriously, he begins to exert the evil influence of Ibsen over his admirers and followers. As he makes himself appear as his own hero, he is a rather tedious person, who goes through life shocking the bourgeois by turning morals and conventions topsy-turvy, very much as Oscar Wilde and his school manufactured epigrams. The character must become infinitely tedious unless taken quite naturally. But Mr. Barker, who has trained his company to the point of playing even Ibsen naturally, undoes all his good work as manager, by preaching and proclaiming as actor from beginning to end of "Man and Superman," until he has converted the play into the sort of edifying lesson that "Ghosts" or "The Doll's House" used to be. Mr. Shaw on politics may be amusing; but Mr. Shaw on himself is, to be honest, a trifle dull, for every one cannot be as interested in him as he is in himself. But the public, having accepted Mr. Shaw, only like him the better for his dulness. His success is complete. He is on the high road to become as established a convention as the top-hat, the roast beef, and the other things he deplores as fetishes of British respectability. And the disappointing part of it all is, that the future of the little theatre, at first so hopeful, now lies trembling in the balance. Will it remain a theatre, or will it, too, degenerate into a temple of moralists, with Shaw for its prophet-in-chief? N. N.

Notes.

A. C. McClurg & Co., Chicago, in conjunction with John Murray, London, will bring out Molmenti's 'Venice: Its Individual Growth from the Earliest Beginnings to the Fall of the Republic,' now appearing in Italy. The translator is, as should be the case, Mr. Horatio F. Brown. Six volumes will combine in three sections, "Venice in the Middle Ages," "Venice in the Golden Age," and "The Decadence of Venice." Each volume will contain forty full-page plates and a Venetian-made colored frontispiece. There will be ordinary and large-paper editions.

'Trade-Unionism in America,' edited by Professors Hollander and Barnett of Johns Hopkins University, is in the press of Henry Holt & Co.

Henry Frowde is about to publish a 'History of the Post-Reformation Catholic Missions in Oxfordshire,' with an account of the families connected with them, by Mrs. Bryan Stapleton. Near at hand is the concluding (16th) volume of Mrs. Paget Toynbee's edition of Horace Walpole's Letters, consisting of the indexes of persons, places, and subjects, including matters of art and art criticism.

F. X. Garneau's History of Canada is to appear in a fifth edition, supervised by his grandson, M. Hector Garneau, who also intends to publish his grandfather's correspondence with eminent French scholars and writers during the preparation of his work. Finally, M. H. Garneau will bring out the correspondence of his father, M. Alfred Garneau, with the literary men of his time, together with one of his careful studies on the French families that came to Canada in the sixteenth and seventeenth centuries.

The City of Ravenna, Italy, has planned a worthy monument to Dante, who died and was buried there. It is to take the form of a museum, in which are to be collected books, statues, relics, and memorabilia of Guido da Polenta's immortal guest. A committee, consisting of the Mayor of Ravenna, of Professor Rava, Minister of Agriculture and Commerce, of Count Pier Desiderio Pasolini and other men of similar standing and responsibility, has been organized, and has issued an appeal for subscriptions to establish the museum. By a happy coincidence, one of the richest Dante libraries in Italy, belonging to Leo Olschkj of Florence, is offered for sale, and three experts—Signori Guido Biagi, Del Lungo, and Bacci—have appraised its value at twenty thousand *lire*. This collection will make the best possible foundation for the proposed museum. It is hoped that in America, which has produced many eminent Dante scholars, and where at the present time there is much effective study of Dante, there may be persons who will be glad to join in this undertaking. Subscriptions should be sent to Count P. D. Pasolini, Ravenna, Italy, whose patronage of the project is a guarantee that it will be successfully carried out.

We have received from the Essex Institute, Salem, Mass., an Index to its Historical Collections for the first forty volumes (1859-1905). It has been well executed by the secretary, Mr. George Francis Dow, and as it confines itself to subject and author in a broad way, it makes a thin volume of 91 pages. The typography is clear, and the figure-references distinctly differentiated. The range of topics is very extensive. Some of the family names illustrated or contributory are Abbott, Adams, Brown, Choate, Crowninshield, Derby, Endicott, Gardner, Gray, Higginson, Peabody, Phillips, Rantoul, Waters, and Upham.

The Dent-Dutton edition of George Eliot's 'Silas Marner' is one of the daintiest books of the season, for which Charles E. Brock's charming designs, all in color, have been freely called in. The title-page vignette might stand for a classic interpretation of "A little child shall lead them." Print and binding are in the established good taste of the London house. Annie Matheson's introduction, we think, adds not much to the intellectual adornment.

The same combination of firms gives us in three volumes Dickens's 'Christmas Carol,' 'Cricket on the Hearth,' and 'The Chimes,' and here Mr. Brock reappears

closes with a brief reference to the devastations wrought by the Abyssinian raids.

We cannot presume on our readers' lively interest in the discussion over the right and wrong of the removal of Prof. Ettore Pais from the directorship of the Naples Museum. We have ourselves taken no sides in the matter, and do not intend to. "T. D. R." returns to the charge *contra*, citing a private letter from Prof. B. Croce in comment on Mr. Wm. R. Thayer's recent communication *pro*. We do not feel called upon to yield our space to it.

—"In Our Convent Days" (Houghton, Mifflin & Co.) is in Miss Agnes Repplier's happiest style. It is a vivid and humorous picture of life in an American convent school, where the discipline was severe and salutary, the luxuries and freedoms of the modern schoolgirl unknown, and the young inmates were thrown on their imaginations for all the excitements and amusements of life. The humors of the convent stage (for amateur theatricals were taken very seriously in that austere little community, and Miss Repplier and her friends, all aged about eleven, seem to have been constantly rehearsing something or other), the exhausting joys of a *congé sous clocle*, or a visit from the Archbishop, the small mutinies and jealousies and devotions of schoolgirls, are actually made amusing by Miss Repplier's light touch and caustic comments. Few people who write autobiography have the art of taking their childhood so lightly. Miss Repplier spares neither herself nor her contemporaries, in one of whom we are invited by the dedication to recognize Mrs. Joseph Pennell. But revelations so neatly and humorously made need leave no sting. Miss Repplier shows in such studies as these a sympathy and imagination that in her more serious essays are too often obscured by the habit of quotation. Unsupported by Sir Thomas Browne or other reflective authors of an antiquarian bent, she is one of the most agreeable of writers. Especially happy is the description of the genial Archbishop, a lover of children, who tries in vain to make friends with the frigid and embarrassed squadrons of little girls, and at last wins their confidence by singing a song about the devil. "Then the Archbishop stepped out of the boat, and there was a timid little scramble to his side. The barriers were down. . . . When he bade us good-by, we shouted and waved our handkerchiefs until he was out of sight. . . . I trust that in Paradise the Holy Innocents are now hearing him company, for I truly believe his soul would weary of the society of grown-up saints."

—"In the Heart of the Canadian Rockies," by Mr. James Outram (Macmillan), has a special claim upon the notice of climbers and geographers, since the author has to his credit more "first ascents," for the region here dealt with, than can be claimed by any other Alpinist. When writing of his adventures, Mr. Outram's enthusiasm often leads him into a strain of picturesqueness, which many of the mountaineers are at great pains to avoid. For example, Chapter XIV. opens thus: "Darkness was gathering apace. The sun had set nearly an hour ago. A piercing wind from a world of glaciers was whistling by on its wild course; and the rising moon, shining feebly athwart a mist of clouds, revealed two shivering human forms silhouetted upon the skyline of a rocky ridge 10,000 feet above the sea. One, perched on the apex of a cliff some seventy feet in height, a precipice on either hand, watches intently the painful progress of his companion in adversity, who, in the dim, shadowy distance, is clinging with chilled fingers to the vertical face of rock by handholds of the tiniest dimension, and wildly waving first one leg and then the other in a blind search for some small, broken ledge or scant projection which may bear his weight, and form another step in the slow, difficult descent." The conservative climber either avoids getting himself into such a plight, or, if night overtakes him on a sheer rock face, says as little about the incident as possible. Mr. Outram certainly has had some unusual adventures amid the Selkirks and Rockies, which he describes with animation and a genuine command of professional terminology. Among his first ascents the most remarkable, perhaps, are those of Mt. Assiniboine (the Canadian Matterhorn), and Mt. Columbia, which, with an altitude of 12,500 feet, is as yet the loftiest of the Canadian Rockies to be mastered. Certainly the present volume will give Mr. Outram a position side by side with Wilcox and Collie, among the explorers and mountaineers of the region between Mt. Assiniboine and Diadem Peak.

—While a genuine love of sport has prompted the pioneers of mountain climbing in the Canadian Rockies, there is one thing which we observe with regret. According to the suggestion of the Royal Geographical Society, peaks when first named should take their name from some physical feature, or, better still, should go down on the map under the title local usage has given them. Now, the climbers in the Canadian Rockies have shown an undue fondness for calling the mountains after themselves or their friends. In many individual cases, there would seem to be an excellent excuse for such procedure. The names Mt. Collie, Mt. Bryce, Mt. Freshfield, ought certainly not to disappear, if we are to have Mt. Stephen, Mt. Sir Donald and Mt. Dupper. But it really does seem a pity to sprinkle the names of railway magnates, climbers and Swiss guides over the whole district from the frontier to the Wapta Pass, without giving local terms or physical features any chance at all. We have it on very good authority that one of the directors of the Canadian Pacific Railway declined to have a mountain named after him for the reasons just indicated. Mr. Outram has interspersed his text with numerous illustrations, which, though far less beautifully executed than those of Mr. Wilcox, serve the present purpose quite well. He also gives a sketch-map, which is founded chiefly upon Collie's work and the charts of the Dominion Land Survey.

—Whenever the library of some European scholar is purchased for an American institution, there is a great outcry in the press against the selfishness of his heirs who let money considerations count for more than the "honor" of their country, and against the laxity of the Government that permits such treasures to be lost to German or English institutions. It is all the more refreshing, therefore, to find a man like Prof. Richard Frenchmann, the University Librarian at Göttingen, taking a stand against such narrowness, particularly against the claim that the Government should step in and buy such private libraries as may be in danger of being exported. In an article on "Scientific Working Libraries," contributed to a recent number of the *Preussische Jahrbücher*, he points out that these libraries usually do not contain, alongside or other particularly rare books, but of the ordinary working tools of the scholar, which, if purchased for a German university library, would duplicate much material already on its shelves, while the purchase for an American library is a direct contribution to the extension of scientific culture and research. "If the German language and literature is to be studied at the Leland Stanford Junior University in Palo Alto in California, which was founded in 1891, it is absolutely necessary that at least a part of the literary apparatus of our university libraries be made available there. The 4,500 volumes of Romanistic literature from the library of the late Prof. Rudolf Hildebrandt in Leipzig, which were secured for the Stanford University, will, of course, be of much greater value in Palo Alto than they would be if they had been kept in Leipzig." In the course of his expostulations Professor Frenchmann makes some notes on the libraries which he visited last year as delegate to the Congress of Librarians in St. Louis.

—In entering upon the duties of his office the new annual Rector Magnificus of the University of Berlin, Prof. Dr. H. Diels, delivered an address on the subject of the traditions of the universities, and the reforms that had been made towards unification in one great institution for Germany. The address naturally attracted a good deal of attention, and was reported in full by leading journals. The speaker declared that the University of Berlin had been fortunate enough to overcome the two theories so potent at its foundation, namely, towards organizing an "allgemeine Lehrstalt." In the widest sense of the term combining the purely scientific work of research with the "useful" branches that had generally been assigned to the polytechnic institutes. These subjects Diels regards as the "children of the polytechnic Douglas of the seventeenth century," who were advocated, too, during the nineteenth. More recently, again, two university rectors, those of Würzburg and Leipzig, have advocated the organization of an "Einheitsuniversität," but Diels maintains that many years will elapse before the Berlin University will consent to such an organization, because this would cause an estrangement of the schools from the real purpose of their establishment. Even as matters now stand, the different parts of the school hang loosely together without the proper internal connection. The chief disadvantage would be that the university would cease to be a purely scientific institution. In conclusion, the speaker emphasized the fact that the development of university studies had gone through a "spiral," developing general culture was in the twelfth and this was followed by a period of intensive specialization. Now the endeavor again is to unite the different members of the whole of research, and this movement is attracting the interest of the students as well as of the teachers. It is not at all desir-

that this tendency be hemmed in by adding to the university curriculum practical studies not in harmony with these ideals. The last sentence of this notable address is a warm appeal to raise on high "the golden sceptre of Idealism."

—The *Petersburger Zeitung*, the leading German journal of the Russian capital, reports some interesting details in connection with the autonomy recently granted to the Russian universities. The Government was anxious to have the work at these institutions resumed, and for this reason granted far-reaching concessions. Practically full self-government was given them. The beginnings of the new régime were auspicious, as the election of the new rectors by the university councils passed off smoothly. To a certain extent the student body, too, showed a proper appreciation of their unwonted liberty, and at once entered upon their duties again. Others, however, especially those of the St. Petersburg University, largely influenced by socialistic agitators, demanded further and some very radical concessions. They agreed upon the following: (1) That the attendance of Jewish students in the universities should no longer be limited to a certain percentage of the total enrolment; (2) that women should at once be admitted to all the departments of the institution; (3) that all the graduates of the secondary schools, even those of the inferior four-year course in the church seminaries, and also all persons without special preparation, but who "were seeking enlightenment," should be admitted to the universities; (4) that certain unpopular professors should be removed, and those who had suffered on account of their political views or activity, should be at once reinstated. At a meeting of the Polish students, the demand was made for the complete autonomy of Poland, for the equality of Russian and Polish in the courts, and the introduction of the Polish language in the schools of Poland. In Dorpat the members of the corps (mostly Germans) outvoted the revolutionary Russians, and work has been resumed in the entire institution. The same is true also of the Polytechnic Institute in Riga and the University of Moscow.

GOSSE'S SIR THOMAS BROWNE.

Sir Thomas Browne. By Edmund Gosse. (English Men of Letters.) Macmillan. 1905. 8vo. Pp. 207.

No other English writer, unless one of the sublime few or one linguistically important, has received the lifelong devotion of two such editors as has the author of the 'Religio Medici' in the labors of Simon Wilkin and of Dr. W. A. Greenhill. You may not care for Sir Thomas Browne; it is conceivable enough that you should find his meandering stream to be tiresome; but if you do like him, you must personally love him. The warmth of affection one feels is his just due would be ill-bestowed upon Montaigne and uncalled-for toward Charles Lamb or toward Horace. How unlike one another these four writers are, and yet how strikingly set apart from others by the personal feeling they inspire! Browne tells us he never read above three pages of Montaigne; and nobody can wonder that the most extreme of believers, who held that Divine Omnipotence could override the principle of contradiction, should not be attracted to the extremest of skeptics.

Any lover of Browne carries a pass-key to the heart of any other; and if Mr. Gosse should only display such a badge, he may be sure that any mistakes he may commit will be lightly dealt with by the present reviewer. But, after a first perusal of his volume in the kindest spirit, attention having been focussed on the questions he revives, we re-read the whole of Browne, together with sufficient proportions of the five or six writers who seem most comparable with him—Boyle, Digby, Henry More, Charleton, Gui Patin, and Samuel Parker; and now, returning to a more deliberate study of what Mr. Gosse has to say, find our general impression to be that, instead of striving to put himself into his subject's shoes, as we, for example, conceive ourselves obliged to put ourselves into his, he rather struggles to squeeze Browne's Alcidian foot into his own pump. You will find examples of this wherever you open his volume. Here is one. Imagine, if you please, Edmund Gosse rapping the author of 'Christian Morals' over the knuckles for not bearing in mind his Vaugelas (p. 197)! The 'Remarques' of that purist did not appear until Browne had already published everything of importance that he was to publish. But the incongruity of the anachronism is nothing compared to that of tying down an English writer whose style was formed before the Great Rebellion, to the rules of French rhetoric! Expunge from Milton's epic whatever would have been out of place in Voltaire's, or even, if you will, whatever Shakspere wrote that Racine would not have written even if he could; but do not tell Browne to write according to Vaugelas!

On the page opposite to this, a sentence from the metaphysical part of the 'Religio Medici' is brought up for censure. This portion of Browne's masterpiece which, be it not forgotten, was written before the publication of any work in historical continuity with modern philosophy, is not a little curious—curious, and something more than that—but has never received the attention it deserves. More than one passage sounds almost like an anticipation of Hegel, but was really inspired, we must surmise, by dialogues of Giordano Bruno (which were published in England), whether Browne read them in Oxford, or, perhaps more probably, caught some reverberation of them in Padua. The sentence in question is this: "God, being all things, is contrary unto Nothing, out of which were made all things; and so Nothing became Something, and Omneity informed Nullity into Essence." Mr. Gosse's blame falls upon the word "omneity," which is somewhat rare, it is true, yet too clear to arrest attention. But when Gosse says that "*oneness* would have been better and simpler," the nonsense this proposes at once convinces us that no better word than "omneity" could be found to take its place. Besides, it had, after all, been long in use, and nothing short of an English Vaugelas (which, thank Heaven, never existed) could make it taboo. There is a school résumé of the 26th chapter of Metaphysics Δ in the form of an equation: "Unity+Omneity= Totality." Mr. Gosse would naturally first try substituting "totality," and it was perhaps on finding that that word would not do at all, that he inconsiderately set down "oneness."

Yet we must acknowledge that "oneness" would indeed have been "better and simpler" if Mr. Gosse's apparent theory of Browne's prose had been correct, namely, that it consists in "wrapping the trite in the coronation robes of fine language" (p. 197). In another place, he finds its secret in the use of "extraordinary words to heighten the effect of ordinary thought" (p. 180), or, as we may probably add, to conceal its vacuity. In short, he makes the last section of the 'Garden of Cyrus' the type of Browne's style. Unquestionably, it was a habit of Browne's to throw out now and then a somewhat unusual word. The infallible effect of such a word is to stimulate the reader's attention; but, whether it be desirable or not for a writer to employ this device, depends upon what he has to say. If the expenditure of energy will be repaid to the reader, and the word be not in itself distasteful to him, which would seldom happen in the generation of Browne, the unusual word will serve its purpose. But there are writers whose unerring instinct counsels them to shun a word whose effect would be the last they ought to desire. These writers wish others would do as they do. Browne's device, as he handles it, is of excellent effect with a reader who has acquaintance with pre-Rebellion English; for Browne, living in remote Norwich, continued all his life to write very nearly the language of his youth. Moreover, he has, more than most writers, a vocabulary peculiar to himself.

Mr. Gosse, as a student of our older literature, must know better than the rest of us how greatly the current vocabulary of books has changed since 1635, when the 'Religio Medici' was written. He certainly knows, too, that, so far as good usage can sanction any peculiarity of style, the usage of that day justified the filling out of the English vocabulary with new words drawn from the Latin. We are therefore puzzled to understand most of his verbal criticisms. Thus, he finds fault with the following from the second paragraph of the 'Christian Morals':

> "Consider whereabout thou art in Cebes's Table, or that old Philosophical Pinax of the Life of Man; whether thou art yet in the Road of uncertainties; whether thou hast yet entred the narrow gate, got up the Hill and asperous way, which leadeth unto the House of Sanity, or taken that purifying Potion from the hand of sincere Erudition, which may send thee clear and pure away unto a virtuous and happy Life."

He pitches upon the use of the word "asperous" instead of what he does not tell us, but it meant *rough*, and *harsh*, or *severe;* and seems to reckon it as "one of Browne's clumsy audacities." But it was a common enough word. Dr. John Fitch asked a blind man who could distinguish colors how he did it. Boyle gives the answer "in the doctor's own [oral] words," beginning: "Black and white are the most *asperous* and uneven of all colors." Archbishop Parker, whose English enters into the Book of Common Prayer, employs the word in his psalter. The Oxford Dictionary, among nine examples of it ranging from 1547 to 1880, has one dated a year or two before Browne wrote, in the phrase "a craggy and *asperous* ascent"; and

an elder contemporary of our doctor, Montague by name (but whether that one whom Mr. Gosse deems a far better writer than Browne, we do not know), has "the *asperous* and narrow way of the cross." In short, "asperous" applied to a road or path seems to have been as familiar a phrase in Browne's day as "asper" in the same connection had been a century earlier. The majority of Mr. Gosse's strictures upon single words used by Browne are as unlucky as this.

Mistaken as such criticisms are, they contain nothing at which any lover of Browne need take offence; for we are bound to say that each rude expression is accompanied by some indication that it is meant to be understood as somewhat exaggerated. For example, Mr. Gosse does not flatly assert that Browne *does* wrap commonplace in coronation robes. He says that that is his "rock ahead"—which is the phrase of a teacher of rhetoric correcting his pupil. Such qualifications bring odious comparison within bounds. To our mind their effect remains substantially as strong as if the qualifications had not been appended.

But remarks there are in the book, and many of them, which inflict a sensible wound upon the heart of a lover of Browne. Such a person believes in him so unreservedly that the good doctor's belief in his religion alone outdoes it. He knows the learned knight, just as one might know a neighbor, for a gentleman in whom was no trace of snobbery, and who, with an innocent satisfaction in his own acquirements, never showed any concern as to what strangers might think of them, and was quite untempted to bolster up pretension with deceit:

> "Not tied unto the world with care
> Of publick fame or private breath."

Here again Mr. Gosse fails to stand in Browne's shoes. He seems to belong to that numerous class of persons, many of them active church members, who no sooner learn that a man is devoted to physical science or to modern learning, or has a trained reason, than they straightway become immotibly rooted in the conviction that, whatever he may profess, that man is not a Christian. As long as theologians had the whiphand, a certain weak presumption to that effect there was. Browne, however, was *not* a genuine scientific man; for though he admitted the circulation of the blood, but not the *unguentum armarium* and the like, and was neither a medical obscurantist, like Gui Patin, nor a medical phantast, like Charleton, yet he was an anti-Copernican, which, in regard to his relations to the world of science, meant everything. Of modern learning he had little or no conception. Nor was he by any means a dialectician. He probably relied in his practice of medicine, as in that of religion, upon what in the latter field he termed "faith"—that is, an intellectual habit which it seemed to him absurd to call upon to justify itself, which seemed to him an evident cognition of things not seen; and experience shows that, in practical matters, men in whom such instincts are robust can lean on nothing less likely to betray their trust.

Of all innuendoes, none are so hard to meet as those of insincerity in religious faith. None are more relished by lovers of innuendo, none more detested by haters thereof. A man so simple and straightforward in all his life and dealings, so universally beloved by his fellow-citizens, the ransacking of whose papers has brought not the smallest double-dealing to light, would be secure against this species of attack if any man were secure; but no man is. Mr. Gosse simply interchanges Browne's chief characteristic with one we can but seem to discover in himself, when he says (p. 28): "We detect a cunning in his apparent innocency," and when he says (p. 31), "Whenever Browne is particularly chatty, we shall find that he is concealing something," and in other passages to similar effect. When he asserts (p. 25) that "the mind of [Browne] had a curious mixture of directness and tortuousness, which disguises" no matter what "from all but the most careful reader," the directness alone is a real character of Browne; the tortuousness and mixed nature seem to be accounted for only as reflections of Mr. Gosse's own mental physiognomy. Although he has admitted that the 'Religio Medici' was written by Browne for his own eye alone, as he was obliged to admit it, this does not prevent him from saying (p. 27) that Browne opens the book "with series of statements which are intended to ward off discussion and to rout suspicion"; and (p. 29) "he makes his confession rather glibly in order that, under the shelter of it, he may insinuate some more subtle reservations," and (p. 31) "under cover of . . . he now insinuates . . ." —with a dozen more such innuendoes. In short, Mr. Gosse intimates that the 'Religio Medici' is one long and cunning lie—not a very heinous lie in his own eyes, but one that should have been seen by Browne to be ignoble and contaminating.

Mr. Gosse penetrates very little into Sir Thomas's works, or we may as well say into the 'Religio Medici,' his one immortal procreation; for we should not very warmly protest against his other works being described, in the phrase of Mr. Gosse, as "pellets of sun-dried pedantry," having carbuncles sparsely scattered among them. But when we think of Browne as a writer, it is the author of the 'Religio Medici' we mean. At the time he put pen to paper, the 'Consolations of Philosophy' was a popular book; and doubtless the heart-bleedings of Boëthius helped to suggest the 'Religio Medici.' But Browne, being moderately wealthy at that time, thought of religion, in its consolatory aspect, less as a buckler against the adversity of which he never had any experience, than as unveiling the sweetness of Death. He is the poet of Death; and the melody of his minor-key prose is adapted to expressing the secret to which he continually recurs, as the jig of verse and rhyme never could be bent to doing. To him religion meant, above all, the gospel of a future life. Of those three topics which Kant says most concern us, God, Liberty, and Immortality mere philosophy, to Brown's mind, guaranteed the first, while ethics postulated the second. His profession incessantly pressed the third problem upon him; and hence, as Mr. Gosse well notes, he seldom smiles and never laughs. The phenomena of death-beds suggested that the great change was as accidental as any other stupor; the anatomy of the cerebrum, even before the days of microscopes, seemed to put before him an amazing multitude of similar elements, ungrouped into differentiated organs, and thus suggested that the soul was "inorganical." That was as far as his controlled and critical reasoning could carry him. But the iatric profession, as exercised by the country practitioner, who has time, like Dr. Browne, to breathe a prayer for all in the sick house when first he crosses its threshold, is calculated to make him aware of the irresistible force of the instinctive belief that seems to give him the grand entry to the presence of the truth that binds human life to eternity. Thus we have proposed a different solution of the problem of the 'Religio Medici' from that proposed by Mr. Gosse, which it would be a shame to allow to go untraversed.

The first chapter of Mr. Gosse's book, concerning "Early Years," sheds some light upon the subject. We will jot down a few points. As to the enigma of how Browne could have spent three years in Continental travel if his fortune was only the lesser part of £1,500, the bearing of the opening sentence of § 77 of Part II. of the 'Religio Medici' has been overlooked in this connection. It is plain that money came to him in some wholly unexpected way; possibly, for example, in a legacy from an Oxfordshire patient. Such a fact may yet be discovered. When Browne says he was born in the eighth climate, Gosse explains (p. 8 *n*) that this means in 8° of latitude. But it is the first climate added to Ptolemy's seven, called *ultra Mœotidis paludes*, extending from 50° N. to 56° N., and therefore covering England. The general tone of the account of Montpellier is somewhat too favorable, and Gosse's laudation of the severity of the examinations for the doctorate should be confronted with the third *intermède* of the "Malade Imaginaire," where the bit of examination given must be supposed to have the degree of resemblance required in a burlesque. That it really had far more truth than that, is shown by its agreement with Locke's account of his visit to Montpellier. Sir Kenelm Digby's sympathetic powder is called an anodyne. It consisted of calcined blue vitriol. It was specified that it should be *Romans* vitriol; but Boyle, in his 'History of Mineral Waters' (sect. iv., art. 9), says that this was pure or nearly pure sulphate of copper, or, in his own terms, vitriol of copper.

Although it is the melody of Browne's prose which constitutes his entire value in Mr. Gosse's judgment, yet he makes no attempt to analyze its mechanism; and perhaps he may be excused, seeing that we are not yet so much as agreed upon the nature of the accent of English words, though it is easy to see that this is not a mere affair of stress. The somewhat nonsensical ending of the 'Garden of Cyrus' it is easy to see is composed of irregular quantitative verses; but this is not the whole story.

> Though Somnus in Homer ‖ be sent to rouse up Agamemnon,
> I find no such effects ‖ in those drowsy approaches of sleep.
> To keep our eyes open longer ‖ were but to act our Antipodes.
> The huntsmen are up in America‖
> And they are already past their first sleep in Persia.

But who can be drowsy at that hour ‖ that freed us from everlasting sleep?

And so on. In the 'Christian Morals,' the imitation of the balance of the Psalms is obvious.

MORE NOVELS.

The Fair Maid of Graystones. By Beulah Marie Dix. The Macmillan Company.

Rose o' the River. By Kate Douglas Wiggin. Houghton, Mifflin & Co.

Squire Phin. By Holman F. Day. A. S. Barnes & Co.

Paradise. By Alice Brown. Houghton, Mifflin & Co.

The Debtor. By Mary E. Wilkins Freeman. Harper & Brothers.

The Princess Priscilla's Fortnight. By the author of 'Elizabeth and her German Garden.' Scribners.

To tell the story of Jock Hetherington, Mistress Dix has compounded a little history, a spice of mystery, mistaken identity, and a lost will; much adventure and foray, cudgelling, buffeting, wall-climbing, skull-cracking, pistol-shooting, torrent-swimming; glimpses of old-fashioned gardens, old Puritan house-keeping; figures of a Puritan family and its Roundhead foes; of a bold beauty and a poor relation, who carries off the honors of the game. It is not betraying confidence to say this, for, from the moment Althæa appears upon the staircase with "a mop of brown hair falling about her shoulders," and is called by her aunt "a shameless hussy," one is sure of her. Into all this bravery of accessory comes tumbling Master Jock, bringing firebrands and stratagems in his wake, yet maintaining always his position as a person, not a mere vehicle for the slings and arrows of fiction. The interest of these is subordinated to the portraits of Jock and Althaea; a spice-pink she, a bundle of very human contradictions he. Well presented are his mingled boyishness and capacity. He is a soldier, yet he can be afraid. He likes his own life mightily, yet he can risk it with no self-admiration. He bristles with pugnacity, yet he can think and resolve with the steadfastness of a parson. He is boyish, manly, and mannish—a strong figure for a young woman to have delineated. The story reads agreeably, and adds another leaf to its author's wreath of laurel.

'Rose o' the River' is as slender a tale as ever walked into print on the merits of an author's name. The heroine, as might be predicted from her poetical label, has stepped forth from a valentine. She had neither brooch nor earrings, "but any ordinary gems would have looked rather dull and trivial when compelled to undergo comparison with her bright eyes." Out of the mouths of a "fool-family" and a professional braggart comes a certain amount of substance, and in the vivid scenes of log-jamming on the Saco there is balm. It is worthy of notice that in York County hepatica and partridge-berries come together as—yes, of course—"sweet harbingers of spring."

Yet another story of Maine is 'Squire Phin.' His office was over Asa Brickett's village store, and there and thereunder goes forward the chorus in this rustic melodrama. The protagonists, meanwhile, are variously occupied in practising law, making love, adjusting quarrels, and preventing scandals, while over all is cast the limelight of burlesque by the return to his native town of the showman. With chariots, a parrot and an elephant, he makes a bulky and a sounding entrance, and with chariots, parrot and elephant he shrieks and plunges and crashes through the story till, tired of his unchartered freedom, he sinks into the repose of wedlock. Squire Phin is a variant upon the lawyer of bucolic fiction. He remains, equally with his prototypes, the *deus ex machina* who disentangles the threads of the Fates, but he differs interestingly from them. He has all their benevolence, and rather more than their high temper; their hard-headedness and his own soft-heartedness, not to say sentimentality. He is a lovable old fellow, in spite of rough manners and a dubious rectitude which led him to compound a felony in order to shield a fellow-citizen and safeguard the ideals of a town. The dialect of this book touches deeper depths than even the usual New England coast story. The incidents bear the same enlarged relation as the dialect to the average village chronicle, as may be proved by the mere mention of a plotted elopement, an embezzling town treasurer, a packed political meeting, a scheming circus widow whose specialties were bareback riding and the paper hoop. Surveying the whole picture and its dashing whitewash-brush work, a creepy suspicion arises that it is destined to be turned loose upon the stage, with a practicable balcony and a real elephant.

There is something about portions of 'Paradise' that recalls George Eliot's 'Scenes from Clerical Life.' It is assuredly not the New England setting, nor the Yankee twang, nor the conjuror, nor the girl palmist. It is the touch and the outlook upon the attitude with which human souls confront their problems and each other—the touch of an artist, that is to say, and the outlook of deep feeling and wide understanding; as in the immortal 'Scenes,' so here there is no evasion of tragedy, but the alleviations are as natural as the pain. Kindness, mercy, and duty lighten the loads and heal the scars—and all without a sermon! Barbara is an exquisite creation; her kindness keeps her thoughts far away from herself; her tender fancifulness teaches her constantly new ways of being serviceable. A good figure is Malory, generous and obtuse, finding yesterday's rapture converted into to-day's burden, and accepting it with matter-of-fact contentedness. The dying Clary lights her pages with her own radiant vitality. Nick, a woodland creature, is touched to fine issues by fine feeling. Uncle Timmie, persisting in an unwilling righteousness for forty years to avoid meeting his undesirable wife in the place of punishment, is unique yet life-like. Jotham, the *malade imaginaire* transformed into a troublesomely officious watchdog to his patient wife by her illness, is another well-sketched minor character. The drunkenness of the doctor seems purposeless, and certainly is not its own excuse for being. In the middle of the book there falls upon the story a certain lassitude of motive and a corresponding fidgetiness of action. The end rallies to a justification of the beginning, and stamps the whole as a little human document of fine quality.

It is difficult not to prepare one's self for a village tale on opening a book by Mrs. Freeman; and indeed it is probable—at least it is to be hoped—that her villaginous manner will always hang about her work whether she be describing a New England town or, as in 'The Debtor,' a New Jersey suburb of New York. If mute, inglorious Miltons and bloodguiltless Hampdens flourish in obscure hamlets, why should not the reverse be true? A special gift is required to deal with all sorts and conditions of men and yet to disclose the village trait that lies at the back of the brain of each—his little ways, his little interests; her bonnets and lace frills; their gossip, their curiosity, their ham and eggs.

'The Debtor' is the story of a man who lost his moral poise through being ruined at the hands of a friend, and who regained it in ways more harrowing to his proud Southern temperament than fire and the stake would have been. The first interest of the book lies in its fidelity to the small things that make up manners and customs. From enjoyment of the fine, miniature-like technique of the opening chapters one mounts to absorption in a broad canvas full of human portraits, and one ends by gazing at a great fresco depicting moral conflict, the deep issues of life, the exaltation of character by self-abasement. Or, to put it differently, one starts on a walk in a commonplace country with commonplace companions, content with sweet air and homely surroundings, but in no wise exhilarated. Wider, greener open the pastures, as the road goes always mounting, till at last one stands on a noble height looking over a noble landscape by a golden light, and the heart stirs within. If, as Mr. Henry James has said, the view from Vallombrosa is "a warm shimmer of history," this view may be called a warm shimmer of human nature—the trivial and even the dusty touched to radiance.

There is a great variety of portraits in 'The Debtor,' from fine, sharp pen-pictures of the rank and file, foreign and domestic, to richly colored paintings of the principals. Delicious in their solemnly humorous irresponsibility is the Kentucky family to whom belong the beguiling little heroine and her father, the charming man of "wrong courses, but right instincts." Their fascination and their weakness are wonderfully conveyed. The barber shop congregation is a group well painted in, as one might see it in a Flemish picture. The toilers in the city, though only sketches, are exceedingly vivid, minute to the last feather and the sly roll of the eye. It would be easy, if it were worth while, to point out little flaws. It is a better use of space to hope that Mrs. Freeman may give us many volumes of State differences and American likenesses with human effort and victory crowning all. "When comedy becomes tragedy," she says, "when the ignominious becomes victorious, he who brings it about becomes majestic in spite of fate itself."

The authoress of 'Elizabeth and her German Garden' is a philosopher who believes in the Right Man as the solution of every feminine problem. He is to be found in all her books, though he does not always play *deus ex machina* so conveniently as in her new story, 'The Princess Priscilla's Fort-

night.' This volume is highly characteristic of its writer. We get the usual epigrammatic humor, not without cynicism; the usual liveliness of narration and dialogue; and, it must be confessed, the usual absurdities and exaggerations. Even granting that a German princess might run away from court trammels to try a country existence in England under the care of her father's old librarian, the subsequent course of events is such as to tax our credulity too highly for our own comfort. We do not for a moment believe that the runaways could have forgotten to agree upon a name, or that the clergyman's son would have betrayed the princess's secret to her maid. And even a radiantly beautiful princess could hardly have such power for good and evil in one fortnight as to make two young men in love with her, all but cause the death of one, throw two mothers into unhappiness, buy and furnish two cottages, demolish the Sabbatarianism and self-respect of a whole village, corrupt a dying saint, and finally bring about a theft and a murder. Yet the characters, though overdrawn, are full of interest, especially the librarian, the princess, the hopelessly adoring squire and his mother, and the rescuing prince, while the description of the kind old vicar is the best passage in the book. As a travesty of the Simple Life the story is amusing and timely, and no one will quarrel with the moral as expressed towards the close: "I feel bound to set [Priscilla's story] down from beginning to end for the use and warning of all persons, princesses and others, who think that by searching, by going far afield, they will find happiness, and do not see that it is lying all the while at their feet."

CHILDREN'S BOOKS.—III.

Mrs. Edgar Lucas's new translation of 'Fairy Tales of the Brothers Grimm' (Philadelphia: Lippincott) furnishes fresh testimony to the undying popularity of these folk-stories, originally printed in 1812. In his introduction to a version published in 1894, Mr. S. Baring-Gould gives us the reason for this popularity, as compared with the evanescence of most of the tales invented by seventeenth and eighteenth-century writers. "Instead of the phantasmagoria conjured up by counts and princesses, came the fresher, more original folk-tales gathered from the mouths of old nurses and shepherds." The 'Kinder- und Hausmärchen' comprise 200 tales, but translators nearly always see fit to curtail this number. Thus, in the English version spoken of above, we have 46 tales; in the present volume of Mrs. Lucas we have 65 condensed into 63. One noteworthy feature of this collection is the omission of many old favorites, such as the "Six Swans," the "Iron Stove," "Snow-white and Rose-red," and the preference for many stories of the Hans Andersen type. Mr. Baring-Gould speaks of fairy tales as divisible into three main groups subdivided into forty classes; but, without going to these lengths, we have probably all differentiated in our own minds the stories of romance and the stories of homely life. In the former there figure princes, princesses, giants, witches, and dwarfs. In the latter we find ordinary peasants and their animals, who are often endowed with speech and reason. This second class of story clearly appeals to Mrs. Lucas, as it does to Andersen, for it fills nearly half the volume. As to the translation itself, though not coming up to the terse humor of the original, it is well-written, clear and usually of great accuracy, which makes it all the more strange to read "dish" for "Schlüssel," "toad" for "Frosch," and "maize" for "Waizen." It is a pleasure to see that Mrs. Lucas adheres to the familiar forms "Red Riding-hood" and "Tom Thumb," rather than the "Red-Cap" and "Thumbling" of some modern versions. We could wish that she had also replaced "Ashenputtel" by "Cinderella," although, indeed, a Cinderella who has no fairy godmother and whose slipper is of gold is hardly the friend of our nursery days. In one point Mrs. Lucas's edition cannot compare with the English version already mentioned. Where Gordon Browne's illustrations are charmingly fantastic, Arthur Rackham's are merely grotesque. They are also so much too dark that the only wholly satisfactory drawings are the silhouettes in two of the tales. But the print is good, the book is easy to hold, and the cover is attractive—all points likely to ensure a well-deserved success.

Eva March Tappan's 'Golden Goose, and Other Fairy Tales, Translated from the Swedish' (Houghton, Mifflin & Co.) is a good addition to the useful work she has done for children in other fields. History, the Gospels, and old ballads have all afforded her material. Now she turns to folk-lore and produces a pleasant, readable little book. It is interesting to see how similar many of the stories are to Grimm's Household Tales. "The Little Wild Man" is a more elaborate version of "Iron Hans," and so is "The Black Box and the Red" of "Frau Holle." The "Roof of Sausages" denotes the Swedish equivalent for the cake roof on the bread house in "Hänsel and Grethel," and the "Simple-minded Giant" is a story compounded of Grimm's "Valiant Little Tailor" and our English "Jack the Giant-Killer." The illustrations are excellent, especially those signed Jenny Nystrom.

If it is ever advisable to invent new fairy stories or adventures of chivalry, then we can but congratulate J. Allen St. John on 'The Face in the Pool' (Chicago: McClurg & Co.). It is interesting, well written, and well illustrated. In fact, nothing can be said against it except that it is not as good as Grimm or Spenser, while challenging comparison with both.

Anna Alice Chapin's 'True Story of Humpty Dumpty' (Dodd, Mead & Co.) marks an advance in matter and manner over her last year's 'Babes in Toyland.' There is more life in the story and more sprightliness in the way of telling it. Furthermore, there are some really charming passages, especially the description of the Fairy of Fancy with her many names. The tasks meted out as punishment to three children who "did not believe in elves or goblins or giants or brownies or anything really important and sensible," recall to us the spirit of the 'Water Babies,' and Make-Believe-Land becomes very real as we read. The type and paper are excellent, and the illustrations, by Ethel Franklin Betts, are pretty, though not up to the artist's level of last year.

May Baldwin's 'The Girls of St. Gabriel's' (Lippincott) is a sprightly story of the experiences of an English girl of fourteen, who spent two years at a convent school in the north of France, on the Belgian frontier. Like most English people, she expected to find no athletics, and was agreeably surprised by the well-equipped gymnasium of St. Gabriel's. The discipline imposed by the Sisters, and the manners of the girls, were a great improvement on the English high school, and made up in the end for the absence of hockey. The heroine's interests were varied by the neighborhood of a French uncle with a haunted château, and the tale has incident enough to make it good reading for any girl under eighteen. There are illustrations, and a good deal of minor detail of the life of a French country house.

The idea of 'Child Characters from Dickens,' retold by L. L. Weedon (Dutton), seems to have been taken from a book called 'Child Pictures from Dickens,' issued anonymously in 1883 by the same publishers. The differences between the two are to the disadvantage of the volume now before us. Its predecessor had fewer stories, it is true, but those selected were told as far as they went in the author's words, with the compiler's additions put in brackets. L. L. Weedon has preferred to condense into a sort of pemmican eighteen of Dickens's stories, with only spasmodic attempts at retaining the language of the original. Dickens reduced to a triturate and retold without his quaint choice of expressions, without his peculiar humor, and with all the minor sub-stories omitted, becomes tedious enough to justify all that his enemies could say about him. Even Andrew Lang could hardly defend such an emasculated Dickens, and certainly the choice of stories, comprising every possible piece of pathos "of the too facile sort which plays round children's deathbeds," would have angered him as much as it will probably depress young readers. When we think how children delight in a Dickens story pure and unadulterated, how the digressions never seem to them too long, the characters too absurd, nor the fun too uproarious, it is surely a pity to let them make their first acquaintance with the author in this stunted and lifeless form.

The same objection can hardly be urged against 'The Shakespeare Story Book,' by Mary Macleod, published in 1902 by Wells, Gardner, Darton & Co. (London), and now reissued by A. S. Barnes & Co. Sidney Lee, in his preface, points out the necessity of becoming well acquainted with Shakspere's plots before we can appreciate his character-drawing; furthermore, no one will deny, first, that any play not seen on the stage is difficult for a child to follow, and, secondly, that the Bard of Avon, even when Bowdlerized, is not always suitable for young readers. The only objection that may arise in our minds is a prejudice against any attempt to supersede the "Lamb's Tales" of our childhood. If they have held sway since 1807, in spite of pretenders, young and old, are we to see their throne usurped now? After a careful comparison we shall probably admit with reluctance that Mary Macleod is a better story-teller than Mary Lamb, and comfort ourselves by remembering what Mr. Lee tells us, that Charles Lamb "was responsible for no more than . . . the six tragedies" in the book bearing his name. In the present volume the stories are clearly put forth, with a consistent and successful retention of the original

words whenever possible, and without that omission of secondary characters and subplots which renders Lamb's Tales so little of a help towards knowing our Shakspere. As Mr. Lee points out, what is "Twelfth Night" without Malvolio, "As You Like It" without Jaques and Touchstone, or "Midsummer Night's Dream" without Bottom and his fellow-actors? In Miss Macleod's version we find all the familiar names skilfully introduced; and wherever a literary or historical explanation is needed, it is well and clearly made. The five plays given in Lamb's Tales and omitted in this volume only prove Miss Macleod's discretion, though we could wish that she had followed her predecessor in giving a Life of Shakspere. The illustrations by Gordon Browne are charming, though moderately reproduced; in short, this book would make an ideal Christmas present.

The collection of 'Myths Every Child Should Know,' edited by H. W. Mabie (Doubleday, Page & Co.), is formed on an entirely haphazard plan, or rather on no plan at all. There are ten disconnected stories from Greek mythology, five from Norse, and one from Indian, extracted from various authors. The somewhat aggressive title rouses us to wonder why a child "should know" the Indian legend of the water-lily, and apparently need not know the story of Penelope's web, the slaying of the Minotaur, or many others equally famous. In a book as small as this, it would undoubtedly have been easier for children if one mythology only had been laid under requisition. If ten chapters give but meagre pickings from the storehouse of Greek legend, the five Norse tales are even more inadequate, and the result of the whole is a confused impression of a great many gods and heroes with difficult names, and too little individual action to remember. One point presents much interest to older readers—the widely differing styles of the writers selected. Hawthorne is evidently Mr. Mabie's favorite, though many people might consider his diffuseness, his facetious or colloquial touches, and his tendency to "talk down" to children, less suited to the dignity of Greek mythology than Kingsley's stateliness, or Church's plain, straightforward narrative. The anonymous Norse stories are very simply told, and Miss Emerson's Indian myth is almost bald in its brevity. We could wish that Mr. Mabie had put his interesting preface before a more consecutive and less heterogeneous collection.

'Micky,' by Evelyn Sharp (Macmillan), is an engaging little story, with an improbable plot, but very probable characters. If it is unnatural that the wrong little boy should be carried off by a travelling juggler to be trained as an acrobat, it is eminently natural that such an imaginative child as he was should wander off in a half-sleepy state to look for the fairy princess spoken of by a kind old lady. The writer evidently regards such imaginative powers with admiration, but it is possible that the book may set parents thinking whether fairy tales are, after all, the best food for the young. H. M. Brock's pretty illustrations give just the finishing touch to the whole.

'The Lay of the Wee Brown Wren,' by H. W. Shepheard-Walwyn (Longmans), on the other hand, may be said to begin and end in its fifty-five illustrations, from photographs by the author. Neither the story nor the verse is of any real merit, but the portraits of the white hen and the wee brown wren itself are simply delightful, not to mention the thievish rat who steals the hen's eggs. The moral that a hen does best as wife and mother in her own yard is admirably suited to the "Little Ones" for whom the tale is so attractively set forth.

'The Garden God,' by Forrest Reid (London: David Nutt), is called "A Tale of Two Boys," but it is singularly unsuited to children. On the whole, we prefer to read platonic speculations in the pages of Plato himself rather than in a so-called tale, and Pan has been dead so long that for two English boys to kneel in prayer to classical gods strikes us as absurd, not to say maudlin. Only the great beauty of the descriptions can divert us in some measure from our prevailing feeling of prosaic and Philistine irritation with the book.

'The Lewis Carroll Birthday Book,' selected by Christine Terhune Herrick (A. Wessels & Co.), is a beautifully got up little volume, with a dainty cover, well chosen illustrations from the original books, and a pretty margin to each page. But as a birthday book it is hardly a success, and the selections do more credit to the compiler's familiarity with her author than to her sense of appropriateness. What, for instance, could be the fun of having a friend inscribe his name opposite such a quotation as this?—"The other messenger's called Hatta. I must have *two*, you know—to come and go. One to come, one to go." Probably there are not 365 suitable passages in the dear old books.

London Films. By W. D. Howells. Harper & Brothers. 1905.

For the title of his book Mr. Howells has borrowed a term of photography. He carries with him a mental kodak; he suspects that he did so long before he knew it. In this book he develops the images received in the mental kodak. The simile is not wholly inapt, but, instead of the indiscriminate and brutal fidelity of the material film, Mr. Howells's mental kodak encloses films capable of receiving the choice impressions of a mind poetical and artistic. As here developed, we have a series of delicate and charming impressions of London in many of its aspects, social, civic, meteorological. These pictures, in themselves delightful, are made more brilliant by a store of sparkling epigram, and of an irony always good-natured, and generally half-sympathetic. "A woman," he says, "may be the queen of England, but she may not be one of its legislators. That must be because women like being queens and do not really care for being legislators." He reads in Poets' Corner the legend on the tomb of Ben Jonson, "Oh rare Ben Jonson," and remarks that "the good Ben was never so constantly rare in life as he has been in death, and that I knew well enough from having tried to read him in days when I was willing to try reading any one." He is astonished by the youth of the girls employed by the Post-Office, and tells us that the Government gets them cheaper than maturer women, and is thereby "helping to repay itself for the enormous expense of the Boer war." Again: "The cheaper restaurants are apt to be English; sincere in material, but heavy and unattractive in expression." He sees the statue of Disraeli, decorated with primroses, "the favorite flower of that peculiarly rustic and English statesman. He had the air of looking at the simple blossoms and forbearing an ironical smile." On an excursion to Greenwich in a vain quest for whitebait, he remarks on "the thin solution of dark mud which passes for water in the Thames." Some one presents him with a small porcelain bust of Washington: "I could only hope that it might be without a surprise too painful that our English Washington would look upon the American republic of his creation when we got home with him; I doubted whether he would find it altogether his ideal." He made it a rule to overpay—consciously—his cabman, and thus explains his rule: "I preferred to buy the cabman's goodwill, because I find this is a world in which I am constantly buying the goodwill of people whom I do not care the least for, and I did not see why I should make an exception of cabmen." It is hard to have to stop in the quotation of these epigrammatic pleasantries.

Mr. Howells had not, as we gather, visited London since 1861, when on his way to Venice to take up the consulship made forever memorable by 'A Foregone Conclusion.' He had the feeling which besets many travellers—the fear that to revisit some old scenes would destroy the first impressions, those treasures of the traveller's soul. And, indeed, his fear was once justified when he found the mounted giants at the Horse Guards giants still, but much shrunken. But resolves not to visit again this or that place were fortunately broken, and Mr. Howells seems to have "done" London as thoroughly as the tourist who places himself unreservedly in the hands of Baedeker. People great and small leave their impressions on the mental kodak, as he flits from the gallery of the House of Commons to Crosby Hall, where he notes with sympathy the demeanor of the neat-handed London Phyllis. At one time he watches a show of State, at another he wanders among the sordid crowds of Jewry. He mounts to the top of one of London's mediæval "buses," notes that marvel of London, a thronging crowd of vehicles obedient to the least motion of a policeman's hand, and records a tender dialogue between lovers. He basked in the sun—when it shone—and had the extreme good fortune, rarer than is supposed, to be utterly lost in a real, dense London fog.

Especially interesting to his own countrymen will be the two chapters, "American Origins—Mostly Northern," and "American Origins—Mostly Southern." In these Mr. Howells tells of pilgrimages to places illustrating "those springs or sources of the American nation which may be traced all over England, and which rather abound in London." So we hear of Penn and Hudson, of Captain Smith, and a host of worthies: "In fact, you can get away from New England no more in London than in America." Some of the illustrations—views of old churches and the like—are welcome; others, good enough of their kind, the ordinary product of the photographer, are hardly in keeping with the delicate products of the "mental kodak."

The Russian Empire and Czarism. By Victor Bérard. Translated by G. Fox-Davies and G. O. Pope. With introduction by Frederick Greenwood. London: David Nutt. 1905.

M. Bérard's work, which we recently reviewed at length and pronounced "timely, high-class, and valuable," now reaches us in an unusually competent and elegant translation, accompanied by one map showing the different agricultural zones of Russia proper, and another showing the general outlines of the various nationalities therein; also by an introduction which adds greatly to the worth of the volume because of its good sense and justice. If the writer's literary style had but equalled in clarity and effectiveness his logic and apparent prophetic gift, it would offer a perfect specimen of such work. It was written at a time when national and party spirit was running high—just after the Russo-Japanese Peace Conference last summer—and its fairness is, accordingly, the more noteworthy. It will well repay perusal for its appreciation of the attitude in England, and of the aims and principles involved in the contest over the question of indemnity, and the probable consequences of the Anglo-Japanese Treaty, which was pending at the moment. As to the former, Mr. Greenwood says: "[Although] knowing . . . what consequences the precipitate ruin of Russia would bring upon the rest of Europe, there are many influential spirits among us who would loose rebellion over the whole country if a word could do it, so furious are they against Tsarism and the Tsar. Wishing for rain, they call down the flood." As for the latter, while freely admitting that the Japanese had as complete a right utterly to destroy Russian prestige throughout the East, and to replace it with respect and dread for Japan (by the exaction of an indemnity to secure peace), as they had to cripple or destroy the Russian army and fleet, he declares that the victory secured by Russia in excluding the indemnity from the Treaty was no small one, and that Japan's retreat from her demand was wise. In Russia, the payment of an indemnity would have ruptured the vital relation of the Tsar and his people and entailed anarchy, while resistance has braced up that relation, and will prove most serviceable to the work of transforming the government "by stages that will neither be illusive nor faithlessly slow."

Mr. Greenwood also clearly foresees that the Witte-Komura peace neither ends the new story of empire nor makes plain its future course, since it takes us but one step into the near future, and that the least dark. He realizes the fact that peace was the sole course for Japan, who could not have continued her dazzling victories beyond or even on the line she had already reached in Mantchuria. "As soon as this dilemma came into view, it was seen, therefore, that the Japanese would presently let it be known that they were willing to make peace—of course on suitable terms. In due time the Peace Conference was brought about accordingly, for sufficient reasons by the most expedient means." And the Treaty merely begins—does not complete—the process of "shifting the pivot of empire"—a process which must needs violently disturb other European and Asiatic Powers besides the two directly implicated. Mr. Greenwood foresees the necessity of putting Japan under "severe regulation," to keep her from pursuing her legitimate and unprecedentedly seductive ambitions, lest England speedily "be placed in the situation of the horse tethered to the tail-board of the cart"; and that the Continental Powers likewise must restrain their aspirations. The writer considers it incredible that the Powers other than England and Japan should remain content with playing no part in the shifting of the pivot, and having no share in managing the situation generally. He does not presage any good results to England from the inferences which the natives of India are likely to draw as to her lack of confidence in her unaided power to repel a possible invasion from Russia, and, though not stated in detail, his view as to the new Anglo-Japanese alliance (then unannounced as to details) is pessimistic in the extreme.

Home Life in France. By Miss Betham-Edwards. Chicago: A. C. McClurg & Co. 1905.

Miss Betham-Edwards is an *officier de l'instruction publique de France*, a position to which one may suppose Englishwomen are rarely appointed; and in the course of a long life spent in great part in France she has come nearer to living the French life and to catching the French point of view than is to be expected from the average Anglo-Saxon who discourses of Gallic manners and customs. Her work is far more exhaustive than Miss Hannah Lynch's, and it differs from Mr. W. C. Brownell's admirable 'French Traits' not so much in range of outline—for in his compact essays Mr. Brownell covered a great deal of ground—but as a woman's work is likely to differ from a man's. It is more diffuse, more detailed, with less of the historical manner, less generalization, and a nicer appreciation of the distinctions of race implied in the attitude towards curtains and afternoon tea and the absence of the old maid from society. The chapter devoted to housekeeping only a woman could have written, and it is not the least instructive. Few outsiders realize the cost of keeping house in Paris, and Miss Edwards's family budgets show a need for stringent economy, even in the case of moderately good incomes, which should comfort the soul of the American housekeeper. Traditions are all very well, but they are transformed into taxes for the Parisian dweller in a flat, who, from an income of $1,500 or less, must smilingly pay out every New Year's Day about $30 in *étrennes* to tradesmen and the greedy *concierge*, before he takes into account the numerous gifts that tradition forces him to offer to all his own and his wife's relatives.

The terrible cohesion of the French family and the real power of the clan system is brought out in more than one of these chapters. For instance, there is the power and the duties of the Family Council, which is a sort of private court of chancery, and is bound to constitute itself with proper legal ceremony and take in charge the affairs of any minor or imbecile among its remote branches. The *Conseil de Famille* was regulated by the Napoleonic *Code Civil*, and the Napoleonic attitude to women is illustrated by the fact that, in the matter of the Family Council, woman is relegated to the status of a minor, imbecile, or criminal; grandfathers, for instance, may be appointed guardians, grandmothers may not. The power of the family in France is evident in another institution, the most singular from the Anglo-Saxon point of view. This is *La Maison Paternelle*, the French equivalent for the private tutor who, in England or America, makes a specialty of managing the unruly sons of the rich. Instead of resorting to this mild method, or, as in England, packing his unmanageable son off to Canada or South Africa, the French father has the legal right to imprison him in what is nothing less than an industrial reformatory for the rich, the *Maison Paternelle*. Several photographs of one of these gilded prisons are given by Miss Edwards, and the mere vision of its barred windows and cells for solitary confinement might well reform the most hardened of spoiled or refractory sons. Here the French father may imprison a son under sixteen, for a period not exceeding one month. From his sixteenth year to his majority a son may be shut up for a period not exceeding six months. The father, of course, pays all expenses. In the year 1900 no less than forty-six youths were thus consigned to the prison of Mettray, which Miss Edwards visited. "An unremitting appeal to the reasoning faculty, persuasion, kindness, and solitude—such are the influences brought to bear upon insubordination, indolence, and vicious habits." All fathers will be interested to learn that this method is said to be a striking success. Only the director knows the names of the inmates, and from first to last the prisoners are so completely isolated that two brothers have been confined at the same time and neither has known of the other's presence in the institution. Incurable idleness seems to be the chief cause for this desperate remedy, and there are numerous cases cited by Miss Edwards of youths who have entered the prison cell firmly refusing to work and even threatening suicide if not instantly liberated, who on leaving the *Maison Paternelle* were able to pass their degree examinations and wrote grateful letters to the director. Some of them volunteer to return and pursue the treatment in case they should fail to pass the examination. "Many 'old boys' send donations towards improvements of the *Paternelle*, as they affectionately call their former prison, and one showed his attachment to the place by visiting it in later years accompanied by his wife." In such a case one hears of the successes rather than the failures. But the French nation is the most reasonable on earth, and the Byronic temperament is probably very rare among French youths. The Mettray *Paternelle* has been founded only forty-eight years, but already a son of a former inmate has been placed there by his father.

Miss Edwards is at her best in treating of social customs and the minor differences of French and English home life. Literature is apparently not her strong point, and the chapter on French fiction is rather thin and superficial. But she has succeeded, on the whole, in writing a very entertaining book, full of detailed information, with

statistics that here and there need slight correction, as when on page 26 she deducts £250 from £300 and leaves a balance of £70; on the following page she speaks of Dijon as "2,000 miles from Paris." On page 67 she speaks of "Hector Malot's popular novel 'En Famille.'" Her use, more than once, of the adjective "Chicagan"—or the substantive, as, for instance, "rich Chicagans"—must be painful to her American publishers. The numerous full-page illustrations from photographs are interesting and well reproduced.

Makers of Modern History. Three Types: Louis Napoleon—Cavour—Bismarck. By the Hon. Edward Cadogan. London: John Murray; New York: James Pott & Co. 1905.

Read in the spirit to which their author appeals, these essays may be commended, for they certainly "stimulate" if they do not "satisfy curiosity." They aim at presenting, in sketches which can each be read in an hour, both a skeleton of the historical career and a portrait of the personality of the three "typical" men who transformed Europe during the third quarter of the nineteenth century. Mr. Cadogan is neither profound nor subtle, and we do not observe that he suggests any new interpretations; but he has read pretty extensively, and he has skill in narration; so that his story is enriched by pregnant quotations as it runs on entertainingly.

The account of Louis Napoleon is on the whole satisfactory. It indicates sufficiently his complex character, although, following the fashion of recent writers, it creates the impression that the Emperor's decline was generally recognized early in the '60s. The truth is, however, that this point of view springs from the wisdom of retrospect. As late as 1867 Europe regarded Napoleon as firmly established, and France as the foremost power. Even when war broke out in 1870, public opinion, both in Europe and in America, expected a swift success for the Emperor. But to-day, as we look back, we see clearly enough that the Imperial régime was rotten ten years earlier; an historian, however, while describing the actual conditions as they have been revealed subsequently, ought never to neglect to paint in their true proportions the conditions as they appeared to contemporaries.

The paper on Cavour is evidently inspired by great admiration for that consummate statesman. Mr. Cadogan indicates the difficulties which beset his path, although one misses at times that keenness of insight needed for going to the heart of Cavour's policy. When he comes to judge the morality of some of the statesman's acts, he takes the practical view that they were justified by the results. To call Cavour a pupil of the Machiavellian school, however, does him an injustice; for such an expression implies that Cavour deliberately adopted Machiavellianism as his rule of conduct, whereas the truth is that his so-called "political immorality" was largely due to his environment. Cavour was really loyal to a higher standard than that of his rivals or predecessors; that he fell short of that standard should not make us forget that he tried to realize it. But perhaps this is a matter that Mr. Cadogan could not be expected to take up.

His treatment of Bismarck has a very uneven quality. Down to 1871 he shows us a fair sketch of the Prussian Titan; but from 1871 to 1898 he simply peters out. Bismarck's losing struggle with the Pope, his losing struggle with the Socialists, and his general work (other than fiscal) as a constructive statesman, are scarcely mentioned, while Mr. Cadogan, as if he were a Chamberlainite and wrote with an eye to influencing the current agitation in England, goes out of his way to applaud Bismarck's imposition of a high tariff in Germany. Nor can we accept his view that Bismarck's dismissal "by the high-spirited boy-Emperor"—is it not stretching a point to call William II. at *thirty-one* a *boy?*—and his last years in retirement were ignoble.

In general, however, these essays may safely be recommended to the unprofessional reader, who will be dull indeed if he does not discover in them the absorbing interest of the three dissimilar men whom they describe. Biographical epitomes are always useful, and they may be made, in the hands of an artist, as precious as portraits are in the hands of a master painter. Even a mediocre portrait is better than none.

Country Homes of Famous Americans. By Oliver Bronson Capen. Doubleday, Page & Co. 1905.

The photograph and the half-tone have brought into being many books that without their aid would not have been undertaken. Entertaining and well worth reading as is Mr. Capen's text, it is certain that without the profusion of pictures large and small with which the book is embellished, 'American Homes' would not have tempted a publisher. With them, it throws a welcome light upon the surroundings of many of our celebrated men, representing, as Mr. T. W. Higginson says in his introduction, "not merely the tastes and habits of the man's household, but the private background of his public life."

Not all the houses chosen are of equal interest, nor are their owners of equal celebrity. If there be little to show for Thoreau, whose very hut on the shore of Walden Pond escaped contemporary depiction, the perhaps less generally known Bartram has left on the banks of the Schuylkill a house of great individuality and picturesqueness, surrounded by gardens once the most interesting in the American colonies. In some instances, however, both the man and his surroundings reach a high level of interest, and of these Washington at Mount Vernon is the type. Excellent pictures of the house with its offices and servants' quarters, of the rooms with their wisely chosen furniture and fittings, of the well-kept formal gardens, accompany a most entertaining description of the great landowner's life as a practical farmer and as a country gentlemen. Few of us have any idea how great were Washington's agricultural interests. At one time, his estates, according to Mr. Capen, reached the vast extent of eight thousand acres. He estimated that his withdrawal from his farms during the Revolutionary war caused a loss of fifty thousand dollars. The pictures bear the strongest testimony to his skill in remodelling the house and designing the minor buildings, and in uniting all into an harmonious whole by means of well studied gardens. Even the curiously winding box borders within the main hedges are said to have been laid out by his own hand. Fine as the view of Washington's flower garden is, it lacks something of the charm of Bryant's old-fashioned garden at Cedarmere. A greater abundance of blossom, a less fantastic arrangement of the box edging (here also laid out by the owner himself), and a very beautiful dappling of light and shade make this perhaps the best of all the garden views the book contains. In all, the homes of eighteen men are chosen, including those of Lee at Arlington, of Jefferson at Monticello, Lowell's Elmwood, Longfellow's Craigie House, and Madison's Montpelier.

There has, of late, been much journeying (on paper) to the homes of great men, but none of these journeys has ended in such a fortunate meeting of text and pictures as have those of Mr. Capen.

This book on Japan by a distinguished son of the land deals with the development of the country through contact with Europeans, the effect of the war, and the present position of Japan.

The author, being as familiar with the West as the East, is able to form an impartial estimate of the situation.

The Russian Revolutionary Movement

8vo, Cloth pp. xv.-366 **By KONNI ZILLIACUS** **$2.50 net**

The accuracy and moderation of tone with which M. Zilliacus has approached his subject are in agreeable contrast with the majority of accounts of Revolutionary Russia.

Originally published in Swedish, and subsequently translated into German, the book has already commanded wide attention in Europe, being generally accepted as the book on the subject.

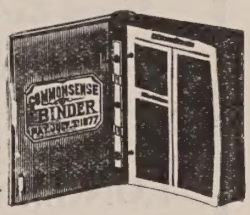
To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with THE NATION stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt o 75 cents.



AN EDUCATIONAL DIRECTORY.

I.—THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12 1-2 per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

A Staff Officer's Scrap-Book

During the Russo-Japanese War

By Lieut.-General Sir IAN HAMILTON, K.C.B.

With Illustrations, maps and plans. 8vo, 372 pages. $4.50 net.

". . . by far the most interesting book on the Russo-Japanese War that has yet appeared from the pen of an eye-witness. He writes with many advantages on his side. As a British lieutenant-general attached to the forces of our allies he was probably allowed to see and learn far more than any other European who accompanied the victorious marches of the Japanese armies. . . . Its chief interest lies not in its narrative, but in its impressions, the impressions produced on the mind of a soldier of insight, sympathy and imagination by the Japanese nation and the Japanese army under the stress of war."—*The Times*, London.

The Coal-Mine Workers

A Study in Labor Organization

BY FRANK JULIAN WARNE, Ph.D.

Research Fellow in Economics, University of Pennsylvania; Author of "The Slav Invasion and the Mine Workers; A Study in Immigration," etc.

12mo. $1.00 net. By mail $1.08.

The Life of Granville, George Leveson-Gower, Second Earl Granville, K. G. 1815-1891

By LORD EDMUND FITZMAURICE. With 8 Portraits (3 photogravures), 2 vols., 8vo. $10.00.

"It is questionable whether any previous work has thrown more light on the machinery of politics, both domestic and foreign, but the latter more especially, of the Victorian era."—*Daily Telegraph.*

JUST READY

The Dissociation of a Personality

A Biographical Study in Abnormal Psychology

By MORTON PRINCE, M.D.

Professor of Diseases of the Nervous System, Tufts College Medical School.
Physician for Diseases of the Nervous System, Boston City Hospital.

8vo, 580 pages. $2.80 net. By mail, $2.98.

This work is a study of a very remarkable case of multiple personality, the subject, Miss Christine L. Beauchamp, being a person who exhibited three different personalities besides her own normal and original one. It is written for the layman as well as the student of abnormal psychology.

THIRD THOUSAND

Human Personality

and Its Survival of Bodily Death

"This book is not merely the book of the month, or the book of the year, but may well deserve to be considered the book of our time."—*Review of Reviews.*

LONGMANS, GREEN, & CO., 91 and 93 Fifth Avenue, New York

THE CRITIC IN 1906

With the issue of January, 1906, THE CRITIC enters upon the twenty-sixth year of its varied career. It was born on the 15th of January, 1881, as a Fortnightly. Later it changed to a Weekly, and finally to a Monthly, in which latter form it has enjoyed its greatest prosperity.

The editorial plans of THE CRITIC for the coming year are not as yet fully completed. Arrangements are in train for certain important series and articles, announcement of which will be made later. Specification may, however, now be made of certain interesting and attractive papers which will be included in the series for 1906.

LOVE LETTERS OF MADAME DE STAËL

One of the most interesting literary discoveries of the last few years is that of a batch of unpublished love letters written by Madame de Staël to Benjamin Constant. The letters, being in the possession of the descendants of Constant, are regarded as the property of that family; but the De Broglie family, the direct descendants of Madame de Staël, have done all in their power to prevent the publication of the letters. The Baroness de Nolde, who owns them, considers that they belong to the literature of the world, and, the writers being so long dead, there can be no harm in the publication of the correspondence.

TALKS WITH TENNYSON

A Series of Three Papers by Miss Elizabeth Chapman, with whom England's greatest laureate talked freely and at length.

MEN, WOMEN, AND BOOKS

A Series of Studies, by Francis Grierson. In the opinion of the editor of THE CRITIC Mr. Grierson is one of the most brilliant essayists now before the public. He is an Englishman, and has published two volumes of essays which have made a profound impression upon readers and reviewers.

A CONCORD NOTE-BOOK

Mr. F. B. Sanborn will continue his delightful papers on Concord and its literary associations. A forthcoming paper on "The Women of Concord" promises to be one of the most striking of the series.

REMINISCENCES OF A FRANCO-AMERICAN

These interesting papers are written by Mme. Charles Bigot, the daughter of the famous American painter, G. P. A. Healy, who spent the greater part of his life in Paris, where his daughter grew up and married. In the course of her life she came to know intimately some of the most distinguished men and women in literature and art that France has given to the world during the last half-century.

LETTERS OF LAFCADIO HEARN

THE CRITIC has the rare good fortune to lay before its readers a series of letters written by the late Lafcadio Hearn to Henry E. Krehbiel, the well-known musical critic of the New York *Tribune*. The two men were close friends, and the letters are of the most intimate nature, at the same time touching upon vital questions in modern literature, the arts, and life.

JOHN MORLEY ON READING

No more important or valuable paper has ever appeared in THE CRITIC than that on "The Great Commonplaces of Reading," by the Hon. John Morley, which will be printed in an early number. In this paper Mr. Morley discusses every aspect of the reading habit, from the Right Attitude of Mind to the Formation of Character.

SOCIAL ENGLAND

A series of papers on social conditions in England, ranging in subject from the costermonger life of Whitechapel to the lords and ladies of Mayfair. These papers, because of their intimate revelations, will be published anonymously, and will be begun early in the new year. It may be said, however, that the author is a writer well known on both sides of the Atlantic.

CHOPIN INTIME

Unpublished letters of the great composer to a friend and fellow musician. Translated from the French and edited by Grace Corneau (the Marquise de St. Maurice).

OTHER ATTRACTIVE FEATURES

THE CRITIC will continue to give to its readers the best that can be secured under the heading of essays, special articles, book reviews by the ablest critics, and illustrations, and also such news in matters of literary, social and art interest as has been fully sifted and has shown evidence of possessing continued interest and value.

25c. a number *SEND FOR SPECIMEN COPY* **$2.00 a year**

THE CRITIC (G. P. PUTNAM'S SONS, Publishers)

27 and 29 West 23d St., New York City.

The Nation.

NEW YORK, THURSDAY, DECEMBER 21, 1905.

The Week.

"I'm not going to make a speech," said Senator Tillman, when the Panama treaty was before the Senate. "I'm just going to throw rocks at it as it goes by." That is a pretty good definition of his regular method. His fellow-Senators would not allow him to make a set oration, even if he wanted to; but on Friday his supply of "rocks" was sufficient to keep him on the floor, with interruptions, for four hours. Tillman's function in the Senate is as unique as it is important. He is the appointed sayer of disagreeable things. His gift of stinging sarcasm, and his very manner of delivery, fit him for this work. The Senate is hardly itself, in fact, except when Tillman and Spooner are exchanging courtesies, as they did on the above occasion. The Republican members would probably have it understood that they burn with indignation and horror when Tillman is running amuck, but we fear it is only "constructive" indignation. How many times, we wonder, has the uncouth South Carolinian blurted out on the floor the very things that his Republican colleagues in good and regular standing were muttering in the cloakrooms? There have been few more valuable contributions to the debate about the Canal Commission than Tillman's uncovering of the fact that Mr. Shonts has continued to hold his railroad presidency after entering the employ of the Government.

In finally voting him two-thirds of the money he had certified to be absolutely necessary for his Panama expenditures, the Senate has given Mr. Roosevelt a pointed rebuke. Very much in the tone of a father paying the debts of a spendthrift son, it has insisted that the squaring of old accounts must mean better methods in the future. Hereafter, the President is to be allowed no fine derangement of a lump appropriation according to his own taste and fancy and the importunities of friends, but must submit to Congress a detailed estimate of salaries. It is to be hoped that he has had his sufficient lesson. As to the personal aspect of that part of the scandal which has excited most comment, Senator Hale's statement, in behalf of the Administration, that the useless "place" of "press agent" at $10,000 a year would be abolished, is open confession that the President had wastefully created a sinecure.

President Roosevelt quite misses the point, in contending that the decision of Judge Phillips, finding Mr. Paul Morton guiltless as to a certain Atchison rebate, fully "vindicates" that gentleman, and also justifies the President in having refused to follow the advice of Messrs. Harmon and Judson last June. Those lawyers asked that Mr. Morton be summoned in contempt proceedings. It was, they pointed out, a process "not unusual or exceptional," but simply in pursuance of "a well-established rule." It was a "demand for an explanation," they remarked, "not an accusation." But the President refused to permit a member of his Cabinet, and his personal friend, to be subjected to this regular process of the court, though there is no doubt that, if it had been demanded for John Jones of Jonesville, Ohio, he would have acceded to it without a murmur. He would not, however, "throw Paul Morton to the wolves," as he expressed it. In that particular affair, therefore, it was not Morton but the President who was in need of "vindication." He had, with a great flourish, appointed two Democrats to conduct that inquiry into rebates, but the moment they struck close home, he declined to allow them to proceed. Naturally, they resigned; and that favorite little device of Mr. Roosevelt's—the employment of eminent Democrats to pull him out of a hole—will probably not soon be attempted again.

Despite assurances that the *new* Dominican treaty was absolutely perfect in form, change after change has had to be made in it. The treaty hastily patched up by our naval officers and proclaimed in Santo Domingo without the formality of submitting it to the Senate, seems to have been scarcely a looser document than the one which Mr. Lodge is trying to pilot through to ratification. The latest demands for alterations come from the Dominican Government itself. It would appear that President Morales is less certain of his dictatorial power than he was, and is being forced to make concessions to some of his rivals. It is they who insist that the benevolent intervention of the United States shall be, not at the whim of the President of either country, but solely upon the request of the Dominican Congress. Thus the whole project becomes the more dubious the more it is studied. It proves to be, like so many of the President's happy thoughts, hard to reduce to terms of law.

The Interstate Commerce Commission now confesses, in its annual report, that it was too positive, in 1903, along with the President, in thinking that the Elkins anti-rebate law had ushered in the millennium. In its report two years ago, as also a year ago, very "favorable comments" were made upon that anti-rebate statute; but it appears that "further experience" has convinced the Commissioners that they were far too "hopeful." That is an old story. Further experience has a way of letting the sawdust out of legislative panaceas. Even Mr. Roosevelt seems to fear that the same course will be run with his latest plan for rate-regulation. He sings much lower about it in his message, and is reported again by Washington dispatches to be more than ready to accept any compromise which will save his consistency. Meanwhile, the dilatory Senate and the do-nothing House act as if experimenting with the President's patience. The report which the Senate committee was to make within ten days of the opening of the session proved to be only a verbal one of little progress among thickening difficulties; and it is now certain that nothing will be done, or even proposed, until after the holidays. Of course, the fact that legislative remedies are necessarily slow and uncertain is no argument against applying them when justice demands it. If the Elkins anti-rebate law is too cumbrous and ineffective, it should by all means be made more direct and drastic The railroads themselves say they want that. So do all honest shippers. On that subject the President and Congress might well first concentrate their energies, leaving more doubtful projects to be taken up later.

Of the bill for reorganizing our consular service, which Secretary Root advocated before the Senate Committee on Foreign Relations, reformers can find little but good to say. It is a measure at once sweeping and judicious. If adopted, it would put an end to many of the scandals which have made Americans blush for our consular system. It would also, we believe, heighten the efficiency as well as the purity of the service. The bill proposes a classification of all consulates. The seven classes are graded, each with a fixed salary, the pernicious fee system being abolished. Also, the statutory provisions that a consul shall not engage in private business are made more stringent. Finally, the whole service is to be put in the way of becoming, what it really never has been in this country, a career. Appointments to the lowest grade are to be made only after competitive examination, and the higher offices are to be reached by promotion for merit. All told, the bill which the Department of State is so strongly urging is a very thoroughgoing piece of much-needed reform. It seems almost too much to hope that Secretary Root can persuade

Congress to adopt it in its entirety; yet we know what he was able to do when in the War Department, in the way of obtaining useful legislation, despite strong and interested opposition.

French example has long been adduced by our ship-subsidy advocates. It is put forward in the report of the subsidy committee accompanying their bill. France pays large sums to stimulate her merchant marine; therefore so should we. Such is the argument. But it is badly damaged by the facts. In spite of lavish subsidies, French shipping has not prospered; and, in the Chamber, confession was openly made the other day that the whole system had been a failure. The official reporter of the budget, M. Pierre Baudin, admitted that the régime of ship-subsidies, especially under the law of 1902, had been of doubtful advantage even to ship-builders, and had worked only harm to commerce. And now even the ship-yards are crying for heavier subventions. It appears that, trusting to bounties, they have fallen behind their foreign competitors in machinery, in methods, and in intelligence generally; hence the appeal to the Government to make up their deficiencies by money payments. That is the usual course of artificial fostering of industries; and the precedent of France, which our confident subsidy-hunters allege, is really one which makes strongly against them.

The particular activity of the Post-Office Department which has most rapidly increased in the last few years, has been, not rural free delivery, nor the handling of franked matter, but the issuance of fraud orders. There were 131 in 1903, 167 in 1904, and 357 in 1905, an output nearly trebled in three years. As the Postmaster-General says in his report, "this does not mean that there has been a corresponding increase in the number of lotteries and fraudulent schemes operated through the mails, for there has been a marked falling off in such enterprises during the last few years. It is due to the increased vigilance of the Post-Office Department and the broader application and more strict enforcement of the statues." About the "broader application" there can be no question. It has been contended by a good many that the denial of the mails to quasi-fraudulent schemes not involving the lottery element or indecency is unwarranted. Yet there have been in practice extremely few cases in which abuse of this discretion by Post-Office inspectors has been charged. The scandals in this branch have all been in connection with orders held back, not with those issued. The fraud order doubtless carries a power easily susceptible of abuse, yet it has proved a most effective means of suppressing whole classes of schemes which are just on the edge of outright criminality, and yet are certainly not conducted in good faith. Their promoters, as a rule, do not fight when their mails are held, but move on to new ventures under other names. Thus about a fourth of the orders issued last year were merely supplementary to those previously in force.

Now, it is the Illinois Manufacturers' Association that is contemplating an assault upon our sacred tariff. Some 132 manufacturing concerns have been obliged, "chiefly on account of tariff restrictions," to establish in Canada branch plants that otherwise would have been set up in the United States. Since many of these companies have headquarters in Chicago, it is estimated that the losses suffered by that city mount up to tens of millions. Naturally enough, the Illinois manufacturers are dissatisfied with the outlook, but it passes our comprehension that these misguided men should dream of appealing to Congress for some sort of reciprocal trade arrangement with Canada. If they were true and loyal Republicans, they would know that President Roosevelt's message settled the question. From that the Illinois manufacturers should have learned that tariff changes cannot be made "on lines beneficial to, or desired by, one section or one State"; also, that there is a distinction between what the President calls "needs" and what he terms "desires." Just what the difference is, we do not feel quite certain; but all the evidence points to the conclusion that a "need" is a "desire" accompanied by votes, while a "desire" is just a plain, unattended desire. Massachusetts, for instance, so long as she continues to return Republican representatives to Congress, may have a "desire" for free hides, but will not really "need" them; the wool-growers of Ohio, however, since they are believed to have the votes, have a genuine "need" for heavy duties upon wool.

Two facts are especially noteworthy in connection with the *Evening Post's* postal canvass on the retention of Platt and Depew, the results of which that paper began printing on Saturday. First is the large proportion of Republicans, chosen from an absolutely non-partisan list, who have thus put themselves on record against their party's representatives in the United States Senate; and, second, the concrete evidence of the change of feeling which has followed the insurance revelations. It may be true, as some of the correspondents point out, that nothing is now known about our two Senators which was not an open secret before; but at least we have found intelligent citizens of the State who did not so consider. Over and over are phrases encountered in these replies which indicate that the writers had formerly been comparatively little concerned about the State's representation in the upper house. Now the turn of feeling has made Depew the special object of indignation. Several men who still think Platt good enough, are bitter against his colleague. Though the *Evening Post* has several times undertaken similar tests of public opinion, it has, it declares, never had so prompt and general a response, nor such strong expressions of feeling as in the present one.

Gov. Higgins's announcement that he has a candidate for the Speakership of the Assembly in the person of James W. Wadsworth, jr., is fresh proof of the trepidation of the Republican party over the plight to which it has been brought. Even so timorous a man as the Governor has been forced to come out into the open against Odellism. As such his action is extremely significant. And there are other reasons why it should arrest public attention. Plainly, the Governor has spoken in response to pressure from Washington. The shrewd politician in the White House has been quick to see that no time must be lost in getting the present helmsman of the party in this State away from the wheel, and in throwing him overboard. Mr. Odell has run the ship on the rocks. If there is any salving to be done, it must be before the rising wind and tide of popular indignation have damaged the craft beyond repair.

The Bar Association, having been criticised by District Attorney Jerome because of its seeming indifference to the disgrace of our methods of electing judges, decided last week that it could neither approve Jerome's charges nor dignify them by calling upon him for the facts upon which he based his strictures. It voted, instead, to take a very conservative course, and directed its Committee on Judicial Nominations to report how the Association can "make more effective its influence in the matter of judicial nominations in this judicial district." There are obviously several ways in which this can be done, and they must have been in the mind of every lawyer present. The truth is, however, that too many members of the bar are affected by the same political and financial influences which impair the usefulness of some judges, to undertake the rôle of guardians of the judicial ermine which Jerome would have them assume. Fortunately, there are some, like Austen G. Fox, to insist that the Bar do its duty in this matter, and prevent that prostitution of the judiciary to the bosses which was so clearly demonstrated by the Mazet inquiry. Against the payment of money to campaign committees by judicial candi-

dates, the Bar Association happily took strong ground.

Mayor McClellan will undoubtedly receive his certificate of election, and be sworn in on January 1, as a consequence of the decision of the Court of Appeals on December 13. That is now the law. Whether it ought to be, is a question sharply raised by the dissenting judges, and a matter promptly and carefully to be considered by the Legislature. We presume that most citizens favor a thorough revision of our cumbrous and dubious election and ballot laws. But that is neither here nor there, so far as concerns the effect of the decision of our highest court. That establishes the law as it is, and no man may justly allege a grievance if the courts have been freely open to him and his rights under the law fully secured. Besides, as the court pointed out, Hearst has a complete if delayed remedy in *quo warranto* proceedings. In a trial of that kind, his counsel could doubtless procure the opening of ballot-boxes and a recount of the votes. For our part, we hope they will pursue the matter to the end, and cause all the facts to be established in detail. But if they do not, let it be set down in advance, any charge of fraud that they make is without legal proof. Their preliminary contention that an inspection of the void and protested ballots would alone show frauds enough to elect Hearst, has been signally disproved. Their claims about the ballots actually in the boxes may or may not be sustained if the courts finally decide to order them opened; but, till the thing is tried out, it is for them, as for all good citizens, to submit to the law, and bring no railing accusation of injustice.

Quite the most important pledge given by Mr. Morton to Equitable policyholders, in his letter published on Monday, is his assurance that the new administration will no longer strive to create the "biggest company in the world." It will not, he promises, seek to obtain new business at the expense of existing policyholders, and if its efforts to get business in any section of the world are shown to be unprofitable, that field will be abandoned. This is a programme whose scope, if the promise is faithfully carried out, is likely to be larger than most readers would imagine. When it is considered that the patronage of the man who really wishes to have his life insured may be obtained at a trifling cost, the ratio of last year's expenses to total premium income in the three great life companies, ranging as it did from 23.73 to 24.65 per cent., proves clearly that such a patron is not being fairly dealt with. Mr. Morton's statement is important as showing that the new managements realize on what points the future protest of policyholders is likely to converge.

Mr. Fitzgerald's election to the Mayoralty of Boston was insured by the independent candidacy of ex-Judge Dewey. If that candidate had stood for a principle, the result would not be so mortifying. Having been defeated in the primaries, he called himself an "anti-machine candidate," and actually succeeded in inducing 11,637 Republicans and Democrats to vote for him. Had these men stood by Frothingham, the regular Republican candidate, the city would now have a Mayor-elect worthy of its traditions. But it has instead chosen a man who will tighten the grip of the Irish Democrats upon the party machine, and the net result of whose administration will be to make Boston more of a boss-ridden city than before. The late Mayor Collins, whose high character and aims were recognized by Republicans and Democrats alike, was quoted during the campaign as having said that Fitzgerald would not fitly represent the Irish Catholics, the Democrats, or the city, if chosen Mayor. Hence the outlook is not pleasant. Mr. Frothingham made a manly, uphill fight, which won to his support many independent voters. One gratifying result was the election of an excellent School Board of five members, all of whom were endorsed by the friends of the schools. In the increase of the Republican members of the Board of Aldermen and Common Council there is additional proof that many voters split their ballots.

The United Mine Workers, in session at Shamokin, have been preparing to demand from the anthracite operators three concessions: an eight-hour day, 10 per cent. increase in wages, and recognition of the union. The first two demands are certainly debatable. Conceivably, there are cogent reasons why the operators should grant an eight-hour day and more pay, though on this point no wise man will reach a decision till he has heard both sides. But to recognize the union would be to surrender the principle of the open shop. The Anthracite Coal Strike Commission, which patched up the present truce between operators and miners, was absolutely explicit in its recommendation:

> "That no person shall be refused employment, or in any way discriminated against, on account of membership or non-membership in any labor organization; and that there shall be no discrimination against, or interference with, any employee who is not a member of any labor organization by members of such organization."

This recommendation has been accepted by both sides as binding until the first of next April, when the question is again up for settlement. In declaring for the open shop, the Commission was moved not so much by the immediate situation in the coal-mining industry as by the fundamental theory of a democracy. If any man, miner or operator, is to enjoy the right to life, liberty, and the pursuit of happiness, he must be free to work for such wages and under such conditions as his judgment approves; to take the job or leave it, by his own choice, not under the coercion of a union which threatens all dissenters with violence or death. For the operators to yield on this contention would be a capital blunder—or worse.

The Germans of Livonia, Courland, and Esthonia, the present scene of the fiercest disorder, however opposed to the reactionary measures adopted in the Baltic provinces, will not make common cause with the Lithuanians in their effort to revive the ancient realm which passed to Russia with the dismemberment of Poland. The region still commonly designated Lithuania is embraced in the governments of Kovno, Vilna, Grodno, Vitebsk, Minsk, and Mohilev, and includes also one of the provinces of Russian Poland. Lettish peasants and workmen of the Baltic provinces have, it is true, been particularly susceptible to anarchistic influences, but their fury is turned equally against conservative German landowners in the country districts and Socialist German labor leaders in the cities. That the Lettish rising has been carefully planned is evident from a recent letter in the *Hannoverscher Courier* which describes the efforts made at a revolutionary meeting at Riga to force even female servants to join the strikers. The Letts number about 2,000,000 people, and their propaganda includes the publication of war-songs and inflammatory appeals. The singing of the "Marseillaise" in Lettish is a regular feature of the revolutionary programme. Their present ferocious assaults on German landowners recall the worst days of the Terror.

Amid all the turmoil in Russia a hopeful feature is the steadying influence of the Zemstvo Congress, which continues its sittings in St. Petersburg. Its last sessions in Moscow were marked by a spirit of liberalism and moderation expressed in the practically unanimous resolutions in favor of Polish autonomy, of a humane policy towards the Jews, and of full political amnesty, from which, however, the perpetrators of the recent atrocities were to be excluded. The transfer of the congress to the Russian capital is an aid to Count Witte, as it brings him in direct contact with the leaders of the only political body which speaks for the intelligent classes of the people. M. Ivan Petrunkevitch, the most influential member of the Zemstvo Congress, exercises a growing authority, to which Witte himself has repeatedly deferred.

HARRIMAN AND ODELL.

Who was E. H. Harriman that he should threaten T. F. Ryan with "legislative action"? He held no office. He was not, so far as known, a member of any political committee. What, then, was that "political influence" with which he menaced Ryan, in order to frighten him into surrendering half the stock of the Equitable? No names were mentioned in Ryan's testimony; none was uttered directly by Mr. Hughes in any of his questions; yet everybody knows who was meant. It was perfectly understood by all concerned—understood at the time by Messrs. Ryan, Root, and Cravath, understood at the inquest by witness, counsel, committee, and spectators—that Mr. Harriman claimed to have such power over the party boss, Benjamin Odell, that he could, through that agent, get anything he wanted out of the New York Legislature. Hence his threat to Ryan.

Had he not, six months previously, got a United States Senator out of the Legislature? Odell's final consent to Depew's election was extorted from him by Harriman. At least, that was openly asserted and not denied. On December 31, 1904, Senator Brackett made a public statement that Odell had given as the only reason for deserting Black and going over to Depew that "it would break one of the dearest friendships of his lifetime should he persist in his support of Gov. Black." That was the excuse he gave to six of Black's protesting friends. To show that they knew the secret of that "dearest friendship," they objected that "when the bargain was struck by which he was made the chairman, and by which Gov. Black was to become the Senator, it was not made conditional upon approval by Mr. E. H. Harriman." But that gentleman and what Depew called "optimism" carried the day; Odell threw over Black, and Depew smiled—for a time.

There was every reason, therefore, to suppose that Harriman's threats were based upon his hold on Odell. Now let us see where Odell was, and what he was doing, at the time when Harriman was assuming power to do with the Legislature what he liked. Mr. Ryan testifies that he bought the Hyde stock on Friday, June 9. The angry interviews with Mr. Harriman were on following days down to Tuesday. During that period, therefore, there were, as the *Sun* remarked at the time, "subterranean efforts to thwart" Ryan. Now Odell returned from Europe on Saturday, June 10—just in the nick of time. On Sunday he went to Newburgh. At that place, on Monday, the *Tribune* reported the State Superintendent of Insurance, Mr. Hendricks, "in consultation with ex-Gov. Odell." On Tuesday, the latter came to his headquarters in this city, where he saw "many visitors." Among them was Senator Depew—a fit errand-boy for Harriman—who talked with Odell "nearly an hour." Later on, Odell parried questions put to him by the reporters, and said he "didn't know whether anything other than the Hooker matter would be taken up at the extra session of the Legislature." So here we have a violent suspicion that Harriman was pulling the Odell wires in those critical days. We know, as a fact, that Odell came out openly later to demand an investigation by the Legislature, although Gov. Higgins was against it. Was not this Harriman's "political influence" visibly at work?"

Some good lawyers have argued that the questions put to Ryan were not "material and proper," and that he should not have been compelled to answer them. Perhaps not, if it were a legal issue joined in court; but in a proceeding under the subpœna of a committee of the Legislature, with broad powers to inquire into all the ramifications of the insurance business, we do not see how there can be two minds about the propriety and relevancy of the questions. One of the chief subjects of investigation was the corrupt alliance between insurance magnates and politicians. To bring out the truth about Harriman's threats was just as material as to elicit the facts about illegal campaign contributions to elect Roosevelt, to probe the payments made by the companies to "Judge" Hamilton and other lobbyists, and to expose the whole set of political leeches fastened upon the insurance treasuries. Harriman's claim that he could checkmate Ryan, or ruin the property which the latter was buying, by using at pleasure the Legislature of the State of New York, was simply part and parcel of the whole nefarious system of secret compact and unlawful undertaking which it was the committee's business to expose. Ryan's testimony on this point was of the last public importance. It shows us to what a pitch of effrontery and recklessness the corrupt alliance between high finance and low politics had reached.

The political bearing of Harriman's statements on the stand fills all minds. Even at Washington it is dominating. Republicans are said to have gone to the President and told him plainly that it is now a question of life or death for the party in New York; being no longer the scandal of Platt's control or Depew's lobbying for corporations or Odell's tyrannical bossing, but of the subjection of the Republican party to Harriman and the interests which he represents. Mr. Harriman himself, with the most splendid naïveté, assumed to be the monarch of all he surveyed. He appeal to Odell for that politician's support? Really, the inquiry was a little too much to make of the owner of 16,000 miles of railway. He would have the committee know that whatever political influence Odell possessed was due to Harriman. The contrary supposition was almost insulting; and the witness proceeded to inform the committee that, when he wanted things done at Albany, he was in the habit of giving his orders direct to the Governor and Speaker. No useless go-between was employed, such as a Senator or Assemblyman whose constituent Harriman happened to be; he dealt with Higgins and Nixon at first hand. And when the chairman of the committee anxiously endeavored to make it appear that this was only the ordinary appeal of bothersome constituents, by which all members of the Legislature are afflicted, Harriman proudly said that he must not be ranked with that common herd. It must not be supposed that he was running or telephoning to Albany about every trifle. He did not move unless he had some big thing of his own on hand, and then he moved straight upon headquarters.

The effect of Mr. Harriman's calm revelation of the true hiding of Republican power in this State, during recent years, will be either a party revolution or an unexampled party disaster. Things cannot go on like this. The Government of New York cannot be run by telephone from the Stock Exchange. We have had Platt's confessions of where he got his bribe-money. Odell's shame is completed by Harriman's cool announcement that the ex-Governor is simply a "kept" politician. An end must be put to these leaders and their methods, or the voters will put an end to the party that endures them.

"MYSTERIOUS INSTRUMENTS."

One of those "mysterious instruments of Providence," of which good people have been telling us, is just now appearing less mysterious, and much less of a divine instrument, than for a long time past. We refer to Thomas Lawson. For nearly four months he has been conducting a huge gambling pool in a stock speculation. Into it he publicly invited his "friends" to go. He did so on the strength of the most positive "statement of fact," not "surmise" or "manipulation"; and resorted to all know what shameless and deceptive means to induce credulous investors to give him their money, and also to compass his ends on the stock market. The net result was his announcement of December 14 that the subscribers to his pool had lost 36 per cent., or $3,600,000.

Whether Lawson himself lost proportionately, no one knows. Apparently, powerful interests have been "gunning" for him, but he is quite capable of joining the hunting party himself, and leaving his "friends" to stop all the shot. After what is known of him, any man who would trust his word or his honor would be a fool. To place your money in the hands of a confessed stock gam-

bler is simply to invite betrayal. What the precise facts are in this case, we do not know, and it does not matter. Lawson has been terribly hurt in prestige, whether he has been hit in pocket or not. But a few weeks since, men spoke of him in awed tones as a man of almost prophetic powers. "Well, he was right about the insurance business, he told the truth about Rogers, and he knows what he is talking about when he says there is going to be a fearful crash in Amalgamated and a panic in the market." That humbug is, at any rate, thoroughly pricked. The heavy facts have crushed the blown pretence.

About Lawson's financial legerdemain, however, we care little. What does interest us is the bearing which this latest disclosure of his moral character has upon the notion recently current that he had been providentially raised up to lead Americans out of the evils of which they have been so acutely conscious. Many a saintly person has propounded the theory. "Perhaps his life has not been all that we could wish, but God often employs strange instruments, and Lawson has certainly been the one to show this country whither it is drifting and how to escape the peril threatening it." In this respect Lawson was regarded something in the light of Hearst. The more unlikely and even incredible a vehicle of reform he might seem, from his known life and methods, the more disposed were certain people to regard him as a messenger of Heaven. So bad a man, allowed to become so conspicuous, must indicate a divine plan. It was the old triumph of faith over again—*credo quia impossibile.*

Now a little reflection, a little discrimination and a slight knowledge of human nature are all that we need to see this matter aright. It is undoubtedly true that dark things have important moral uses in this world. Knowledge may come to us from the confessions of dishonest men, just as justice may be furthered by a criminal turning State's evidence. That, however, does not make the dishonest man honest, or the criminal a worthy member of society. It is not necessary to dispute the claim that Lawson had much to do with preparing the public mind for the insurance explosion. Doubtless his trumpeting abroad of nefarious financial activities, which he knew about from having shared in them, predisposed people to believe that all he said was true because a part of it proved to be. Similarly, we may concede that the cries and contortions of Hearst may have had a good effect in rousing dormant attention. But to admit that, is simply to admit that the wrath of man may be made to praise the Creator. An explosion of foul gases may clear the air, but the gases were foul all the time.

Our sole point is that we must differentiate the evil and untrustworthy man as informer, as betrayer, as clamorer, from the evil and untrustworthy man as reformer. In the former capacity he may enlighten the public; in the latter, it is preposterous to suppose that he can lead it. Heaven moves in a mysterious way its wonders to perform, but it never provokes human beings to despair and even atheism by confounding good with evil, vice with virtue. From corrupt and selfish men we may get useful information, but we never can get wise or safe leadership. To quote that master of political philosophy whom, now that he has been cited in a Presidential message, even an editor may feel emboldened to adduce: "When men," says Burke, "whom we *know* to be wicked impose upon us, we are something worse than dupes. When we know them, their fair pretences become new motives for distrust." And it is his further dictum: "There is no safety for honest men but by believing all possible evil of evil men, and by acting with promptitude, decision, and steadiness on that belief."

FEDERAL CONTROL OF INSURANCE.

Senator Dryden's testimony before the insurance inquiry relative to Federal control of insurance, fell in with reports from Washington that efforts would be made to try the experiment in a purely tentative way. Himself the author of a measure pending in Congress he recited, as arguments for Federal supervision, first, protection of the foreign business of American insurance companies; second, protection of the people against fraudulent insurance companies; third, the unifying of the code of insurance law, which now varies widely in the different States, and places very divergent restrictions on insurance methods. Mr. Dryden did not lay stress upon the argument lately developed by Mr. James M. Beck on this question, that Federal supervision would be preferable because of the saving in fees and taxes as compared with what is involved in the system of State supervision. Nor did he touch on another familiar argument in its favor, based on the presumption that Congress, in its dealing with insurance questions, will be less subject to corrupting influences than the State legislatures, and that Federal supervisors would similarly fall less under the influence of insurance officers striving to evade the law than State Commissioners notoriously have done at times.

President Roosevelt's recent message spoke, on the whole, very guardedly of the plan for Federal supervision. He recommended that "Congress should consider whether the Federal Government has any power or owes any duty with respect to domestic transactions in insurance of an interstate character," adding: "That State supervision has proved inadequate, is generally conceded." The President's caution, in refraining from any definite proposal, was undoubtedly prompted by the constitutional difficulties in the way of compulsory Federal control of insurance. The Supreme Court's dictum in the well-known leading case of Paul *vs.* Virginia is that "insurance contracts are not articles of commerce in any sense of the word. They are not subjects of sale and barter, offered in the market as something having an existence and value independent of the parties to them. They are not commodities to be shipped or forwarded from one State to another, and then put up for sale. . . . Such contracts are not interstate transactions, though the parties may be domiciled in different States."

We see no reason for supposing that this decision would be reversed by the present Supreme Court; and, indeed, even if the reasoning therein contained were to be abandoned, there would nevertheless remain a serious obstacle, pointed out by Mr. C. F. Randolph in the *Columbia Law Review*, namely, that compulsory Federal control of insurance, if it involved the right under the interstate commerce clause to debar from business a company which did not take out a Federal charter, would thereby assume that the power of Congress to regulate commerce among the States includes also the right to prohibit it. This question would be of much importance, and could hardly fail to impress the mind of the Federal courts. The situation created by such legislation would not be, like some other considerations involved, analogous to the case of the national banks, because Congress in the bank legislation merely intervened to place a discriminating tax on note circulation of other than national banks. With their business activities in other directions it did not interfere. Banks with State charters went on exactly as before, save for the issue of circulating notes.

It is these considerations which have led to the more general adoption, by advocates of Federal supervision, of purely permissive legislation. From Washington comes the report that Mr. Roosevelt may advocate in a special message legislation for a Federal insurance bureau which shall supervise companies in behalf of the District of Columbia, where the national jurisdiction is unquestioned. Bills have already been introduced in Congress with this experiment in view. Such legislation would obviously not go very far. The additional proposition has been made that Congress endow with the title "national" all companies which voluntarily submit to the rules and supervision of the Federal insurance bureau. This plan, again, resembles the lately much-discussed project for Federal incorporation of the Trusts; the argument in both cases be-

ing that the national charter or title would serve as a species of guarantee of soundness and good faith which would lead all respectable companies, in their own behalf, to resort to it.

To this experiment, applied in a purely permissive way to the insurance companies, we can see no objection save that against the multiplying of offices. To the plan of Federal charters which shall supersede and replace existing charters there are many objections, quite outside of the question of constitutionality. Senator Dryden's own bill, for example, has been bitterly opposed in Massachusetts, on the express ground that it provides less protection for the policyholder than do the State insurance laws. "The bill," asserts Mr. L. D. Brandeis, counsel for the Equitable policyholders' protective committee, "omits very many of the provisions which, for instance, in Massachusetts, have been inserted for the protection of the policyholder; it adds not a single one by which he may be better protected." Senator Dryden's bill, no doubt, might be amended; but the argument of the law officers of the State of Massachusetts challenges its fundamental principle, affirming that "State supervision is good or bad according to the merits of the best of the commissioners," whereas "Federal supervision must be good or bad according to the qualities of one man who is unchecked by the work of coördinate officials." It will possibly be replied that the existence of several excellent State bureaus for insurance supervision did not prevent the practices which the Armstrong committee's inquiry has exposed. But it must be remembered that the questions of solvency, financial soundness, maintenance of a proper reserve, are those which have chiefly occupied insurance bureaus in their supervision of companies chartered in another State. The generally admitted solvency of the companies, in the face of the corruption and misuse of funds by some of their officers, may be fairly accepted as witness to the adequacy of present State supervision in at least this regard.

UNCERTAINTIES AND CERTAINTIES ABOUT RUSSIA.

The difficulty of arriving at a clear notion of what is going on in Russia, not to speak of what the future has in store, is confessed not only by foreign spectators. Russians admit themselves equally at a loss. "We have all gone crazy" (*nous sommes tous fous*), said a Russian long resident in Paris to the editor of the *Temps*. It is a confession echoed everywhere. Russians in this country, with every means of private as well as public information, and with every motive for following events in their native land anxiously, will tell you that they know no more about the actual situation than does the average newspaper reader. And as to what is to take place, they refuse to prophesy even a day ahead. The confusion so closely approaches chaos, the uncertainty and fear are so great, the reports of massacre and pillage and universal snapping of the bonds of social order are so alarming, that we seem to be witnessing something like the fulfilment of Motley's forecast sixty years ago. Writing to his wife from St. Petersburg he said: "It seems to me that just as this city may at any moment, by six hours' too long continuance of a southwest wind, be inundated and swamped forever, so may Russia at any moment, through a succession of half-a-dozen bad Czars, be submerged in its original barbarism."

It is not surprising that the fall of the old governmental edifice in Russia should have been with such a tremendous crash. History may not repeat itself so precisely as some fondly believe; but the old teachings of history are always applicable, partially at least, to new situations. And while it is foolish to try to make the French Revolution go on all-fours with this Russian upheaval, we can see in the break-up of the *ancien régime* in France a working of human passion not unlike that which the Russian peasants and artisans are displaying to-day. Taine traced with endless detail the effect of long years of absolutism and oppression upon the psychology of the French people; and the terrible revenges they took upon the seigneurs almost seem to be the instruction which the Russians have bettered. Their work has been wild, but it has not been unnatural. Given dangerous gases under a constantly increasing pressure, and an explosion is inevitable. The wreck and terror of it are still making the news from Russia too much like the mad outcries from an insane asylum to be really intelligible or guiding. We are yet in the period of immense uncertainty, when any day may bring forth anything in Russia.

Some things may, however, be set down as certain. An end must somehow be put to violence. A reign of terror may have been necessary, all the circumstances being what they were, but it is necessary, too, that it be brought to a close, and order established. If the thing be not done by the muzhiks and the workingmen coming to their senses and allowing the moderate Liberals of intelligence to set up in peace a representative government, then some man of iron among the reactionaries will arise to put down the disturbers of public order with a merciless hand. The alternative to rational and orderly reform, after the tempest shall have passed, is a dictator. If things are too long abandoned to the mob, the "whiff of grapeshot" will do the business again, and do it with the approval of the civilized world, and of all in Russia who have property. Amid all the uncertainties, that is a certainty. Revolutionaries themselves admit that they have not intelligence or cohesion enough in their ranks to form and conduct a government. Then it is madness for them to get in the way of the men who can do it. Every one must hope that enough force may remain at Witte's orders to enable him to cope with mere anarchy, and to make possible the carrying out of the great experiment of a government in which the people have a voice.

That there is a body of educated and solid citizens in Russia, ready and able to bring their country into a new period safely, if freed from mob terror, the evidence is ample. We have reported from time to time the signs of hope and progress in the doings of the Zemstvo Congress. There has but now come to us a French translation of the programme recently put forward in the name of the "Democratic Constitutional Party." It was adopted at Moscow by the Liberals who have long striven for a Russian Constitution. Their sketch of what they think that fundamental law should be, shows them apt students of modern democracy. Guarantees of the elementary rights of the citizen —liberty of conscience, freedom of the press, the right of public meeting and of petition, with others—they would see written into the very charter of the new Government. Then, in their Article II., they provide for a representative government, with universal suffrage, annual budgets, and a responsible ministry. The judicial power is defined and safeguarded; the land question put in the way of legal solution; public instruction provided for. All told, such a project for modernizing and liberalizing Russia would be full of promise if there were hope of the country's soon settling down so as to permit trial of it to be made. At the adoption of this "platform," as we Americans should call it, by the convention at Moscow, some of the men who had long struggled and suffered for Russian liberty were overcome with emotion. They thought their dreams about to come true. But a condition precedent is the restoration of order. If the Liberals cannot restore it, the autocrats will.

FOREIGN OBSERVERS OF MODERN GERMANY.

Time was when the French could be justly reproached with wilful ignorance of their German neighbors. To-day, however, Paris papers and reviews abound in articles on Germany, and to not a few may be applied Goethe's encomium, as expressed to Eckermann: "It is remarkable how these writers in the Paris *Globe* grow steadily in stature and importance, and how unanimous their aim and purpose." One of

the most valuable summaries of recent French impressions of Germany may be found in a paper by the Vicomte Eugène Melchior de Vogüé in the *Revue des Deux Mondes*, on "The New Germany."

M. de Vogüé revisited Germany after a lapse of twenty years, and found that "the good old woman has become a young giantess." Smiling fields have been transformed into bustling factory towns; the economic progress is prodigious. Two words, "colossal" and "Imperial," are the keynote of the Germany of to-day. Postoffices, railroad stations, stock exchanges, theatres, restaurants—all bear the impress of an architecture "striving after a double ideal—that of Rome and Chicago." Art has adapted herself to the new conditions. There is a wealth of statuary, almost exclusively of military heroes, ungraceful but impressive, as if "weighted down with a mighty thought." The bronze man on horseback meets the gaze at every step. "Thirty years ago, if one espied a statue in some small German town, he was safe in saying: 'Here stands some scholar, philosopher, or musician.' To-day it is one of the three founders of German unity." The personality of William II. pervades all Germany. He sets the national pace. In Bremen, M. de Vogüé's guide excuses himself for walking so rapidly: "It is the Emperor's gait."

But the modern Empire, nevertheless, has its charms for the Frenchman. The Hanse towns are of particular interest to him. Hamburg is a true republic, where equality is not an empty sound. M. de Vogüé found there not a trace of the friction between France and Germany, of which the papers of both countries were so full. He was much struck with the proud independence of the merchant princes of Hamburg and Bremen. "We want no ship subsidies from the State," he was told; "they kill private initiative and paralyze freedom of action." But amid all the evidences of material prosperity the French observer detects signs of evil augury—"the laziness of the younger generation rolling in the wealth acquired by the older; the laxity of morals, so noticeable in Berlin; a general weakening of the former discipline."

It is interesting to contrast with these impressions an article by Prof. Kuno Francke of Harvard on "German Ideals of To-day," in the December *Atlantic*. He naturally devotes much attention to modern educational standards, and, on the whole, regards with approval that tendency which, to quote Morley, "mightily exalts science." He is full of enthusiasm for the new literary and artistic movement, which he considers "in every way a worthy counterpart" to the great era in German literature at the end of the eighteenth century, much as he deplores the fact that "but few of the ideals that swelled the breasts of Schiller and his contemporaries" are a living force to-day. He has a robust faith in the superlative future greatness of Germany. Despite her bitter political antagonisms and the unbending rigidity of a church which "is doing her best to make religious life to the great majority of the people appear as a prodigious lie or mockery," he concludes, in a strain of glowing optimism, that, with undisturbed political conditions, the way is open to "a golden age of German achievements in every domain of higher inspiration."

It is curious to trace in the calm, philosophic skepticism of the French academician as in the exultant tone of the German-American professor, the influence of the forces which have transformed both France and Germany since the great struggle of 1870-71. In comparing these writers, so widely different in their points of view, one is often tempted to deplore, with Lowell, "that German tendency to bear on too heavily where a French critic would touch and go with such exquisite measure." Probably no one can be less conscious of a desire to disturb international relations than Professor Francke, and yet he allows himself to join in the cry of narrow German patriotism that "the beginnings of German sea-power are grudgingly watched, denounced, and, as much as possible, thwarted by cousins across the Channel." Not thus do men like Professor Paulsen endeavor to win their countrymen over to saner views of Anglo-German relations. These relations have grown less cordial in proportion as the French have drawn closer to the English. Few students of the comparative psychology of nations have dwelt on the fact that English influence on many of the greatest French writers has been deep and far-reaching, while very few German writers of similar rank have come under its direct spell. Montesquieu, Voltaire, Rousseau—to mention only the greatest—all visited England and gained some insight into that country. To these names can be opposed, among Germans, only Lichtenberg, Heine, and Grillparzer. And Heine wrote: "Send a philosopher to London, but, for Heaven's sake, no poet."

The French of to-day are learning to understand both the English and the German. The judgments of M. de Vogüé and Professor Francke show in a strange way the shifting of some of the standards of national greatness in both countries since the Franco-German war. In his conclusion, M. de Vogüé wishes for his country a future "rich in the moral lessons to be drawn from the fate of Germany, though her wealth increase a hundredfold, even at the expense of France herself." In contrasting the modesty of this forecast with Professor Francke's triumphant pæan, one is reminded of two poems characteristic of the martial poetry of 1870-71—Freiligrath's "Trompeter von Gravelotte" and Déroulède's bugler, in one of his "Chants du Soldat." Both poems treated of the same subject—a dying bugler's last trumpet call; but while the Frenchman's last note was one of proud defiance, that of the German was one of humanitarian sadness. Have France and Germany changed rôles since then?

POPULAR EDUCATION IN IRELAND.

DUBLIN, November, 1905.

The appearance of the report of the Educational Commissioners for last year leads me to write concerning the system of national education in Ireland. Like every other department of government and administration here, it is managed by a Castle-appointed board responsible to the British Government of the day. The system was inaugurated in 1831, with 789 schools having 107,062 pupils, supported by a Parliamentary grant of £92,500 per annum. Fifty-three per cent. of our population could then neither read nor write. Last year (1904), for a population little over half what it was in 1831, the number of schools had increased to 8,443, the pupils to 736,545, the Government grants to £1,411,285. Our illiterates are now but 14 per cent. of the population. The number of pupils is nearly 30 per cent. less than some years ago. This is due in part to the decrease in our population, in part to the increased means at the disposal of religious orders, and their efforts to attract pupils to denominational schools. The large increase in the Parliamentary grant is no proof of special generosity on the part of the Imperial Treasury. It is well known that a committee of enquiry, appointed by Mr. Balfour some years ago, reported that Ireland was, as against the terms of the treaty of union, overtaxed several millions per annum. The South African war and the, of late years, enormous increases in the cost of armaments have considerably added to this overtaxation.

The National Education system, as inaugurated, was an honest effort on the part of doctrinaires to draw all parties in Ireland together by common education in common schools. The schools were open to persons of all denominations. No pupil was required to attend at any religious exercise, or to receive any religious instruction which his parents or guardians did not approve; and opportunity was afforded to the pupils of each religious persuasion to receive separately such religious instruction as their parents or guardians approved. Then, as now, a card was exhibited during ordinary school hours notifying that secular instruction alone can be imparted. It must be remembered that undenominational education as between Catholics and Protestants implies a narrower system of education than undenominational education between Protestant churches or sects. The Bible cannot be referred to, and history of any value cannot be taught. (I doubt there being any population in the world of like intelligence to ours that knows so little definitely of the history of its own country.) Although both the Catholic and Protestant archbishops of

Dublin gave their approval to the system and took part in its management, and although children of all denominations, in default of other means of education, trooped into the schools, the system was from the first assailed by the preponderating influence of both Catholics and Protestants in Ireland—the former declaring the schools to be "godless," the latter demanding "the open Bible" in the schools. In 1831, Irish was very generally spoken throughout the country. No one contends that it was not desirable that the people should then have been taught English. It is, however, now very generally recognized that it was a misfortune that children were not taught English through their own language rather than to its exclusion. Their minds were stored with a rich heritage of tradition, song, and legend, for the most part elevating in its tendency. They have in general exchanged this, not for the higher literature in the English tongue, but for the penny-dreadful and the yellow press. There was, however, then no general protest on the part of Irish Ireland, and we can scarcely blame the chief movers (mostly English) in the establishment of the system, who were profoundly ignorant of the treasures inherent in the Irish tongue, which they regarded as but an impediment to enlightenment and to material progress.

I have said that the system was an honest effort for common education. Common effort on common grounds does not necessarily imply common aim. Nothing gave a more powerful weapon into the hands of Catholic opponents of the system than the publication of a letter of Archbishop Whately's, after his death, in which he justified his support of the schools by his belief that they tended towards the disintegration of Catholicism. As Catholic Ireland gained in power and influence, its opposition to the national schools became more effective, and a few years ago a compromise was arrived at which appears to satisfy all parties. The teachers from the first had been educated together in an undenominational college under the Board. This system was changed. The old college was retained, practically for Presbyterian teachers. Denominational training colleges under religious management have been established. Government allows a capitation grant, and the students must pass Government tests in secular knowledge and teaching capacity. After some years' training under religious influences—the Catholics in conventual institutions under religious orders—there is no likelihood of their influence, even under a normally undenominational system, being other than denominational. Then comes the strangest part of our system—that which places teachers completely under the thumb of ecclesiastical authority. Each school has a manager appointed by those originally instrumental in having it started, or in succession of the manager then appointed. Four-fifths of the managers are clergymen. The teachers of these national schools, supported by the State and paid for by the State, are appointed by and can be dismissed by the managers! There can be little doubt that, in the choice of teachers, the religious concerns of the parish are often more considered than the education of the children.

The system has become practically denominational, 4,332 of the schools under Catholic teachers are attended exclusively by Catholics; 1,536 under Protestant teachers are attended exclusively by Protestants; 1,934 schools under Catholic teachers are attended by only 5.4 per cent. Protestants, while 868 schools under Protestant teachers have only 8.9 per cent. Catholics. There are but 30 schools in which Catholic and Protestant teachers work together. It is not uncommon to find near together in the same district schools nominally undenominational, in reality Catholic, Episcopal, Presbyterian, or Methodist; and in localities where the population is sparse and mixed, children who have a school at their door will be found walking miles to one the bias of which is more congenial to the belief of their parents. Thirty schools throughout Ireland, with an average daily attendance of 6,650 pupils, are kept directly under control of the Board, as model schools. They are generally mixed, and are not approved of by the religious world; nevertheless they are attended by about 2,000 Catholic children.

To those who realize what united systems of a really common education are accomplishing in other countries, that which I have sketched may appear deplorable in its denominational segregations. That it is preferred, shows how sincere and general is the belief in Ireland that eternal happiness depends upon the conservation of certain forms of belief—that the affairs of this world are as nothing compared to those of another. Any suggestion for the popular control of the details of education is scouted, especially by Catholics. If Ireland had to pay for its education out of funds raised in Ireland, it is scarcely likely that this state of feeling would prevail. Apart from history, the Irish national schools now afford an excellent common-school education. In the care of the girls, perhaps more attention might be given to needlework and domestic economy.

To encourage intermediate education in Ireland a Board of Commissioners was some twenty years ago instituted. It is a purely examining body. Each year it puts forward a course of study. Upon this course, to all comers below a certain age, examinations are held annually at centres throughout Ireland. The subjects examined in extend from classics and modern languages, through the ordinary school course, to music, shorthand, physics, chemistry, mechanics, botany, drawing, and physiology. Last year 8,530 young persons presented themselves for examination at 234 centres, £8,800 was given in prizes, and £62,800 to schools in proportion to the number of students they passed successfully. The cost of administration, some £15,000, appears high. This board has done good work, and has sensibly raised the standards of intermediate education. The result of its examinations has dispelled the illusion that Catholics in Ireland lag behind Protestants in their abilities and desire for education, and that Catholic schools and colleges are less capable than Protestant of imparting knowledge. Five Catholic schools stand at the head of last year's list as having carried off the greatest number of prizes and exhibitions. Catholic and Protestant schools bracketed together occupy the sixth to the twelfth places. Of the 557 boys' prizes, 70 per cent. were gained by Catholics. The value of these prizes was £5,537, and 66 per cent. of this was gained by Catholics. In the case of girls, 69 per cent. of the prizes and 72 per cent. of their value was in like manner gained by Catholics. (Catholics form 75 per cent. of our population.) This is a remarkable record, considering how the education of Catholics was banned in the past, and that its outcome is barred by the want of a university entirely in accord with Catholic predilections. We must also take into account the smaller proportion of our Catholic people than of our Protestant that have risen into the social scale from which these intermediate scholars are drawn.

Ability to pass examinations is by no means a test of education in the best sense of the term. Observers must be constantly struck with the narrow range of thought and feeling, with the little real interest in literature and wide affairs, in those who have passed examinations brilliantly. They, however, afford the only possible tests of fitness for office and public employment. There appears more of a tendency in our Catholic youth than in our Protestant to look for careers in life to official employment rather than to business. The Irish Protestant temperament appears to take more kindly to business and commerce. We Irish have not shown the same ability as the English and the Scotch in assurance and banking. Something must be allowed for the degree to which the deadening effect of the Penal Laws has not yet worn out, and something for still unsettled political problems. Protestants in Ireland, both indigenous and immigrant, are, in the main, satisfied with the institutions of the country, and can give undivided attention to their own affairs. Catholics still, to a considerable extent, have "their backs to the wall." As, through the extension of local government, appointments fall more and more under popular control, Protestants (being in the minority) have less and less chance; while as to business, I heard an Englishman resident in Ireland say lately that he thought a young Protestant had as good chances here as across the Channel.

D. B.

THE MANUSCRIPT OF PASCAL'S 'PENSÉES.'

PARIS, November 28, 1905.

The French language seems, by its precision, its clearness, some would say its dryness, particularly fit for the expression of those short and isolated sentences which are called "Pensées," "Maximes." We have literature of this sort which may truly be called incomparable. I need only speak of La Rochefoucauld, of Pascal, of La Bruyère, of Vauvenargues. The attention of collectors of the precious works of these thinkers has been recently called to the new and very curious edition of the 'Pensées' of the immortal Pascal; it is no other than a facsimile of the manuscript which is preserved in our National Library. The manuscript and the facsimile are so difficult to read that the text has been printed opposite, with valuable notes by M. Léon Brunschvicg. The whole forms a folio volume, with 258 plates in phototypes, and 258 pages of text.

The public can now have full knowledge of what Sainte-Beuve called these "immortal *brouillons*"; for the notes written by Pascal are no more than rough drafts, comparable to the first sketches of an artist. M. Victor Giraud, writing on the subject of this new edition, justly remarks that

"if we had to enumerate all the works—editions, articles or books—of which Pascal has been the subject for fifteen or twenty years past, we should be surprised to see how many of the faithful cherish among us the religion of this great memory. . . . In the space of only two years, 1896-1897, there appeared as many as five new editions of the 'Pensées'; in less than six years, from 1899 to 1905, six volumes, six studies, have been consecrated to Pascal. Is Pascal going to dethrone Voltaire or Molière in this fervor and community of admiration which is generally professed for the great writer who represents best the genius of a race? Are we beginning to be as proud of the author of the 'Pensées' as the Italians are of their Dante or the English of their Shakspere?

"The answer to these questions seems to be easy: the popularity of Pascal will never be of the same order as the popularity of Dante or Shakspere; the word popularity, even, ought not to be employed in this case. Pascal will never be read except by the 'happy few,' by an élite of thinkers interested in religious and philosophical questions. The dramatic part of his work lies in the inner life; it is not objective, but purely subjective; it lies in the conflict of philosophical doubt and religious belief, in the struggle between human pride and the humility of faith."

The two great works of Pascal are the 'Provinciales' and the 'Pensées.' The 'Provinciales' made more noise in their time; they are a series of letters on the questions which separated the Jesuits from the Jansenists; they are an eloquent and very persuasive indictment of the worldly form of religion of the Jesuits, of what was called the "religion aisée"; at the same time they may be considered a theological work, dilating chiefly on questions which in our day are almost forgotten by the great public, if not unknown to it. The 'Provinciales' were published by Pascal himself; the 'Pensées' are mere notes, fragments, materials for a work which Pascal never finished. How were these notes to be published? The author's plan could only be presumed, and it was necessary to find a method of classification. The plan adopted by the friends of Pascal, the Jansenists of Port-Royal, consisted in classifying the 'Pensées' according to their general tendencies; in that form they constituted a sort of methodical apologia of the Christian religion. I have before me the original edition of the 'Pensées,' in its Jansenist binding (simple morocco, without any trace of gold). The title is 'Pensées de M. Pascal sur la religion et sur quelques autres sujets qui ont été trouvées après sa mort parmy ses papiers.' There is a preface, not signed, explaining how the 'Pensées' were written and collected, what Pascal's object was in the work he intended to write, and in what way he spent the last years of his life. The same arrangement of the 'Pensées' was followed in succeeding editions, and in our day in various editions which I need not mention.

An attempt has been made to use in a different way the original materials left in our hands. These materials, besides the original manuscript, two copies of which are also in the National Library, consist of two manuscripts of Father Guerrier, the portfolio of a Doctor Vaillant, three other manuscripts, one of which had been in the possession of Sainte-Beuve, the edition of Port-Royal, the edition of Bossuet, the life of Pascal by Madame Périer, the works of Nicole. Sainte-Beuve, who can always be fruitfully consulted, wrote in 1852 an article on the new edition, with notes and commentaries, of M. Havet. In it he discussed the problem of the 'Pensées,' and showed that the first edition did not contain all that Pascal had left. "The principal facts only were given; and in what was given, various scruples of doctrine, even of grammar, induced the editors to soften, to explain certain parts where the author's vivacity and impatience were manifested in too brusque or too concise strokes, and with a positive character which, in such matters, might be compromising."

It was in 1844 that M. Faugère published the 'Pensées' in conformity with the manuscripts themselves; and the Havet edition gave this text with many notes and explanations. M. Léon Brunschvicg has taken a step further: it has seemed to him that into the disorder of the manuscript it was not impossible to introduce a certain order. He has attempted to make a new classification of the fragments left by Pascal, and to unite them according to the subjects treated. M. Brunschvicg is a philosopher; he has published articles and books which show him to be in a state of mind different from that of Pascal; but he is impartial, and never takes a combative attitude. He has subdivided the 'Pensées' into fourteen sections: (1) Pensées sur l'esprit et sur le style; (2) Misère de l'homme sans Dieu; (3) De la nécessité du Pari; (4) Des moyens de croire; (5) La Justice et la Raison des effets; (6) Les Philosophes; (7) La Morale et la Doctrine; (8) Les fondemens de la Religion Chrétienne; (9) La Perpétuité; (10) Les Figuratifs; (11) Les Prophéties; (12) Preuves de Jésus-Christ; (13) Les Miracles; (14) Fragmens polémiques. M. Brunschvicg edited the 'Pensées' for the collection of the Great Writers of France (Hachette), and had previously published a classic little edition of 'Opuscules et Pensées' (Hachette, 1897). His notes and commentaries are very valuable, and his efforts to understand Pascal very interesting. He has crowned his long labor by reproducing in phototypes the manuscript of the 'Pensées.' This beautiful work is chiefly due to the house of Hachette, which from the start has rendered such services to French letters.

The sight of the words written by Pascal's own hand makes an impression, a sensation of its own. It seems as if you followed the very movement of his mind. The fragment of the Wager (the *Pari*) is almost illegible, but its physiognomy is very peculiar and in harmony with the thought. In the fragment on the "thinking reed" (*le roseau pensant*), written in a beautiful and very legible manner, how striking is the close! "The last act is bloody, however fine the comedy may have been in all the rest; a little earth is at last thrown on the head, and there is the end forever." Pascal had first written "for eternity"; he changed it to "forever," finding "pour jamais" more terrible. Joseph Bertrand, the mathematician, wrote a volume on Pascal (1891); a poet, Sully-Prudhomme, has given us quite recently 'La Vraie Religion selon Pascal,' a research into the purely logical order of his 'Pensées' relating to religion, followed by an analysis of the 'Discours sur les Passions de l'Amour.' We must mention also the 'Pascal' which M. Adolphe Hatzfeld published in the collection of Great Philosophers, the 'Pascal' of M. Boutroux, professor at the Sorbonne. We read in his preface: "Pascal knelt before writing, and begged the infinite Spirit to subdue to himself all there was in him, in order that that force might accord with this humility. By his humility he offered himself to inspiration."

It is a curious fact that Pascal should have drawn to himself so many eminent thinkers in all times. He remains a sort of problem which is never solved. What will always attract us, after all, to Pascal, is not the theologian: it is the moralist and the writer. He will ever remain one of the great masters of the French language. There is much truth in what Sainte-Beuve wrote many years ago (and who could judge him better than the author of the admirable volumes on Port-Royal?):

"Curious and erudite minds will continue to study Pascal *à fond*, but the result which appears now acquired for minds that are simply serious, and for hearts that are simply right—the advice I am going to give them after reading the last edition of the 'Pensées'—is not to pretend to penetrate too far into the peculiar and Jansenist Pascal: it is to be content to approach him on this side and to hear him on some essential points, but to be satisfied with him, with the spectacle of the moral struggle, of the storm, of the passion which he feels for the good and for a worthy happiness. Taking him in this way, you will sufficiently resist his somewhat narrow and absolute logic; you will be open to his flame, to all there is that is tender and generous in him; you will associate yourself easily with this ideal of moral perfection which he personifies so ardently in Jesus Christ; you will feel yourselves elevated and purified in the hours spent in *tête-à-tête* with this athlete, this martyr, this hero of the invisible moral world. Pascal is all that for us."

Noble words and great thoughts! Nobody could express better or better condense the real significance of the 'Pensées.' "The world moves," also says Sainte-Beuve; "it is developing more and more in the direction of positive interests. . . . It is well that there should be somewhere a counterpoise; that in a few solitary places, without protesting against the movement of the century, some firm, generous, not embittered minds should tell the century by what means it might complete and crown itself."

Correspondence.

LETTERS OF HORACE WALPOLE: INDEX

To the Editor of The Nation:

Sir: As the Clarendon Press has issued an announcement relating to the index volume of my edition of the Letters of Horace Walpole which conveys the impression that the indices have been prepared by myself, with the assistance of the gentlemen named, I beg to state that this is not the case.

Owing to circumstances beyond my control, I was unfortunately prevented from completing the indices in time for the publication of the index volume at the date announced by the Delegates of the Clarendon Press. I was myself desirous that the issue of the index volume should be post-

poned for a few months, in order that I might fulfil the promise of the prospectus and title-page as to the preparation of the indices by the editor of the work. The Delegates, however, considered it of paramount importance that the volume should be issued at the date originally announced, and I was therefore reluctantly compelled to accede to their request that I should hand over the indices to them for completion by other hands. My MS. material, which covered the whole of the first eight volumes and part of the ninth, for the index of persons (with the exception of the article Horace Walpole), and the first two volumes for the indices of places and subjects, was sent to the press on the understanding that it should be printed in its entirety, and should serve as a model for the completion of the index on the same plan.

When, however, the proofs of the index reached me (which I was requested to correct, though the copy was withheld from me), I found that my plan had been changed, and that numerous alterations, excisions, and interpolations had been made, without my consent, in the portions completed by myself, so that I was no longer able to recognize my own work.

In these circumstances I could not consent to correct the proofs, nor can I accept any responsibility for the indices now announced for publication.

Yours faithfully, HELEN TOYNBEE.

FIVEWAYS BURNHAM, BUCKS, ENGLAND,

"CLASPED LIKE A MISSAL WHERE SWART PAYNIMS PRAY."

TO THE EDITOR OF THE NATION:

SIR: This beautiful line, the subject of a communication to the *Nation* of November 23, seems to have been penned for the confusion of critics and translators. It has misled two literary connoisseurs of acknowledged reputation, M. Philarète Chasles and Leigh Hunt. M. Chasles, rendering, half a century ago, passages from the "Eve of St. Agnes" into French prose for the *Revue des Deux Mondes*, proceeded prosperously until he encountered these unlucky Paynim, whom, deceived by their contiguity to a missal, he took for clergymen, and translated accordingly. Perceiving, nevertheless, the singularity involved in the complexions of these divines, he met the difficulty in true French fashion by calmly dropping the inexplicable epithet, and writing "Où prient les prêtres," thus making the missal continually open where it behooved it to be continually shut. For Leigh Hunt's interpretation is entirely wide of the mark. He says: " 'Clasped like a missal in a land of Pagans'; that is to say, where Christian prayer-books must not be seen, and are, therefore, doubly cherished for the danger." He conceives, then, of the missal as "clasped" to the bosom, out of special affection, or for special protection. But if the slumbering Madeline can be appropriately compared to a missal in this condition, she herself must obviously be "clasped" in the same manner—she, the ideal of virginal purity, whom her very lover only dares to approach.

"Clasped" means simply fastened with a clasp, and the sleeping maiden is compared to a shut missal, precisely as in the last line of the stanza she is compared to a shut rose; with the heightening circumstance that not only is the missal shut, but it is shut in Heathenesse, where it will never be opened.

I remain, dear sir, yours very truly,

RICHARD GARNETT.

HAMPSTEAD, LONDON, December 10, 1905.

GLADSTONE AND THE CONFEDERATE LOAN.

TO THE EDITOR OF THE NATION:

SIR: I have received from Mr. John Bigelow a copy of his pamphlet 'Lest We Forget,' wherein it is maintained that Mr. Gladstone held Confederate stock, and that, in denying that he held it, as he did most emphatically, he lied.

I thank Mr. Bigelow for his courtesy in sending me his pamphlet. I find in it not only not the slightest proof of his charge, but corroboration of Mr. Gladstone's denial. Mr. Bigelow gives the names of a number of other persons of more or less distinction who were set down as holding Confederate stock, and who publicly denied the fact. As they were avowed partisans of the South, they would not have been ashamed of holding Confederate stock. Forgery, then, was at work; and the motive for it in Mr. Gladstone's case is plain.

The imputation in Mr. Gladstone's case was monstrous. He was a member of a Government in a position which called for the utmost circumspection. Such indiscretion on his part is surely incredible.

Mr. Bigelow's charge really rests upon nothing but the assumption that Mr. Gladstone was an enemy of the United States. This I positively deny. In holding that the better course would be, instead of forcibly reannexing the South, to let it go and look to future union with Canada, he did no more than was done by some of the warmest friends of the republic.

Yours faithfully, GOLDWIN SMITH.

TORONTO, December 12, 1905.

CANADIAN BIBLIOGRAPHY.

TO THE EDITOR OF THE NATION:

SIR: Apropos of your paragraph on Canadian bibliographies, it may interest some readers of the *Nation* to know that Dr. N. E. Dionne, librarian for the Legislature of Quebec, has published a most valuable work on this subject. This is his 'Inventaire Chronologique des Livres, Brochures, Journaux et Revues Publiés en langue française dans la province de Québec, depuis l'établissement de l'imprimerie au Canada jusqu'à nos jours, 1764-1905.' He proposes to follow this up by a second list of all the works published in different languages bearing on Quebec, and also by a third, comprising the books, pamphlets, newspapers, and reviews published in English in the province of Quebec. Apart from its other merits, this 'Inventaire' shows the skill of the French-Canadian printer. A. M.

DALHOUSIE COLLEGE, HALIFAX,
December 11, 1905.

THE TEMPERANCE CAUSE IN GERMANY

TO THE EDITOR OF THE NATION:

SIR: To those who have watched the progress of the anti-alcohol agitation in Germany it will be of interest to learn what has been accomplished to date. The results are summed up by Dr. Popert of Hamburg in the *Politische-Anthropologische Revue* for December. According to this report the results so far achieved may be classed under four heads: (1) a large increase of total abstainers, and their unification into a body that is managed with military strictness of discipline; (2) the dissemination of facts (*Aufklärung*) among all classes of society through the medium of this organization; (3) the tactics to which the abstainers have compelled their opponents to resort; (4) the change in the attitude of officialdom.

The total number of abstainers in the German empire is now sixty thousand. This is but 1 per cent. of the entire population, and does not look very promising. The case, however, wears a different aspect when we remember that, twelve years ago, there was but one prominent temperance advocate south of the Elder. Besides, as Dr. Popert reminds us, these twelve years were the time when the cause had to undergo its severest test. It had to encounter ridicule of the most unqualified kind, both in public and in the periodicals that deigned to mention it at all. Total abstainers were commonly designated as "old women without petticoats." Vituperation has now taken the place of ridicule; on this line the various alcohol interests have united for defence. While the Independent Order of Good Templars is the élite corps of the temperance army, there are in Germany thirty-four other organizations of the same character, and about an equal number in Austria. The bar has an organization of its own, with several branches, as have also the students.

These are all united into the *Allgemeine Deutsche Zentralverband zur Bekämpfung des Alcoholismus*. The cause is supported by more than forty periodicals. It has been demonstrated that the expectation of life of the total abstainer is about twenty-five per cent. better than that of the moderate drinker. Some time ago, the *Zentralverband* of Hamburg offered a prize of one thousand marks to any one who should disprove the truth of this affirmation. No takers have thus far reported. It is further admitted that every drop of alcohol taken into the human system during its development period is poison. The success of the Japanese has also done much to promote the cause of total abstinence. During the strike of the miners in the present year, the watchword was everywhere: "Workmen, beware of alcohol; it is your worst enemy." The warning was heeded, and not a crime was committed.

Under the third head may be discussed all the financial interests affected by the decrease in the consumption of strong drink. The weapons chiefly used are distortion and misapprehension of the facts elicited by experiments on the human system, and denunciation. It need hardly be said that we are already sufficiently familiar with this mode of procedure.

Significant of the changed attitude of the Government officials were the auspices under which the third convention of total abstainers met in Dresden, in September, 1905. The civic authorities granted the use of the largest public building in the city,

besides a subvention in money. The municipal council, including the mayor, greeted the convention in words that testified the strongest sympathy with the cause it had met to promote. Perhaps the most interesting feature of the temperance cause is the fact that it originated in a sentiment, a sort of instinct of self-preservation, akin to that which keeps animals from eating deleterious plants. At last this instinctive feeling has come to be recognized everywhere as founded on a strictly scientific basis. CHARLES W. SUPER.

ATHENS, O., December 14, 1905.

THE BACHELOR'S DEGREE.

TO THE EDITOR OF THE NATION:

SIR: The annual report of President Butler of Columbia University has been read with interest by many who note with pleasure what he says of the arrangements by which candidates for the bachelor's degree are no longer to be compelled to devote four years of study to its attainment. The following sentence contains the gist of the matter:

"It breaks up the lock-step, or system of uniform annual promotions from class to class, which has lingered on in the colleges long after it has disappeared from the elementary and secondary schools."

This has met with general approval, and has been commented on widely by the newspapers as "The Columbia Idea." In this connection it is interesting to refer to an editorial in the *Nation*, September 4, 1902, of which the following is the significant portion:

"Following the example of Harvard, the University of Pennsylvania rearranges its order of studies so that an ambitious student may attain the bachelor's degree in three years. This is brought about much as it was at Cambridge, by requiring a certain number of courses for the degree, and permitting the student to follow as many in any year as he is able and willing to undertake. By carrying twenty hours of classes a week, the required sixty courses are completed in three years. Furthermore, the university intends to accept the logic of this 'unit' system, and let every man achieve his sixty units in his own time—be it three, six, or ten years. That this innovation will greatly change the traditional leisureliness and solidarity of American college life, no one can doubt."

When this change went into effect at the University of Pennsylvania in 1902, it necessitated another change, the benefits of which are felt more and more each year. Every student was assigned to a member of the faculty, who was to act as "adviser." No selection of studies could be made without the guidance and general approval of the adviser, who was able to make many suggestions, the result of experience, of the utmost value to the student. The plan has accomplished much more than was expected of it; and what the chairman of the Pennsylvania committee who drew up the plan termed "graduation by birthdays," has disappeared, and "graduation by individual ability" has taken its place.

Yours truly, JOSIAH H. PENNIMAN.

UNIVERSITY OF PENNSYLVANIA,
December 16, 1905.

Notes.

The Macmillan Co. will publish directly 'The Modern Trust Company: Its Functions and Organization,' by F. B. Kirkbride and J. E. Sterrett, and the 1906 edition of 'Who's Who,' much enlarged, and containing the number of a man's sons and daughters, of his motor-car, his telephone, and sometimes his telegraphic address.

Mr. R. R. Bowker sends us Volume II. of the 'American Catalogue, 1900-1905' (Office of the *Publishers' Weekly*). It is substantially a reprint from that journal's Weekly Record of new books, but reduced under one alphabet *per annum* and not for the period. Its contents are less complete, numerically, than those of Volume I., but, on the other hand, it gives the full title-pages—and, above all, is annotated here and there. The annotation is not systematic, and presents many curiosities of selection and approbation. Often enough it usefully defines the character or summarizes the contents of a work; sometimes it has to tell of the author, as that he is a clergyman (writing on the mosquito), or that "Mr. Riis was born in Denmark in 1849," or that "Mr. Corbin is a Harvard man who has resided in Oxford," etc. But the most striking feature is the attention bestowed upon novels and the outlines of their plots. This may be very well for the *Weekly*, but it obviously entails a great loss of space, with no permanent gain. If no one, five years hence, can name the author of 'Miss Pritchard's Wedding-Trip,' for instance, will posterity be greatly interested in the nine lines setting forth its plot? We must not be thought to undervalue this section of the Catalogue. It is a great and worthy enterprise, and it is to go on.

The Newnes-Scribner series of "Drawings by the Masters" gives us, in its latest issue, forty-eight drawings by Menzel, on the whole rather disappointing in quality. They are very various in manner and material, from smudgy charcoal to incisive pen, and contain figures, animals, architecture, even elaborate studies of Moltke's field-glasses, but show little to justify a colossal and almost legendary reputation.

'Normandy,' by Gordon Home (London: Dent; New York: Dutton), is, we take it, to be considered mainly as a vehicle for the two-dozen colored illustrations and the fewer line drawings, by the author. At least, we trust that Mr. Home will pardon us for devoting our limited space, at this season, rather to his art than to his literature. His water-colors, then, so far as one may judge them from reproductions, are eminently sound and sane, well drawn, not disagreeably colored, apparently rather literal, but always interesting in choice and arrangement of subject. In some of them there is an over-insistence on the note of blue and purple; but otherwise there is nothing impressionistic, as there is nothing romantic. We are travelling in the company of a sensible man who knows what is worth seeing and shows it to us as it is. The book will certainly give us a better notion of Normandy than Mr. Menpes's much more multitudinous blots can convey to us of Brittany or another place.

E. S. Shuckburgh's 'Augustus' was first published in London by T. Fisher Unwin, in 1903. It now appears on the list of an American publisher (A. Wessels Co.). It is a valuable book, fuller than Firth's 'Augustus Cæsar' in the "Heroes of the Nations" series, which is the only other English biography of Augustus; and Shuckburgh's eyes are more open to the evils attending the establishment of monarchy than were Firth's.

The child public has fared decidedly well in the season's crop of books, and we have not exhausted the notable juveniles in our three conspectuses. We must be very brief with what remain. 'The Red Book of Romance,' edited by Andrew Lang (Longmans, Green & Co.), will be welcomed by many as the youngest scion of a delightful family. Otherwise, in spite of its attractive form and fine illustrations by H. T. Ford, it is distinctly disappointing. The stories are all told by Mrs. Lang, and are in a graceful, easy style, except for a trick of generalization in a would-be humorous fashion, and occasional unpleasant affectations. No attempt is made to place the stories chronologically, and we pass from "William of Palermo" to Norse heroes, from the "Gesta Romanorum" to Spenser and Cervantes (both of whom, it may be remarked, seem to strike a jarring note here), from "Early English Metrical Romances" back to Apuleius, and on to the "Orlando Furioso," in a way to puzzle even a mature reader. Beatrice Clay has done an excellent piece of work in her 'Stories of King Arthur and the Round Table' (London: Dent; New York: Dutton). It would seem at first sight impossible that, after 'The Age of Chivalry,' Lang's 'Book of Romance,' and the works of Sidney Lanier and Howard Pyle, there should be any room left for a new volume of Arthurian stories. Yet in this present book the legends are so plainly, concisely, and connectedly told that a reader will probably get a clearer idea about the Round Table than from any of the writings above mentioned. The same English and American firms are coupled on the title-page of an unabridged 'Robinson Crusoe,' with colored and other illustrations by J. A. Symington. These are pleasing if (in the color plates) too finished, and the unusually broad measure permits an open, readable type. Edith Dunham's 'Jogging Round the World' (Frederick A. Stokes Co.) is a curious photographic object-lesson in modes of land conveyance the world over, and will please any child by the plates alone. There is a slight text for each. Helen Hay's 'Verses for Jock and Joan' (Fox, Duffield & Co.) challenges comparison with Betty Sage's 'Rhymes of Real Children' of a year ago. The verse is correspondingly humorous, perhaps a trifle more sophisticated. Charlotte Harding's colored designs will hardly be thought equal to Jessie Willcox Smith's, yet are admirable in their way. The letter-press, in its yellow border, is inharmonious. 'The Dwarf's Spectacles, and Other Fairy Tales, told by Max Nordau to his little Maxa' (Macmillan), is worthy to be read and loved by many other children for its originality, its pleasant style, and its gentle lessons with touches of deeper meaning. 'A Natural History for Young People,' by Rev. Theodore Wood, F.E.S. (E. P. Dutton & Co.), is an illustrated English compilation which deals with mammals, birds, reptiles, fishes, and invertebrates. The writer has given a few original observations. Beyond a general classification, he has not attempted scientific methods of treatment. He has selected, from the various groups, the most

interesting species, and has written about them with much entertaining detail.

The problem of providing suitable collateral reading for college classes engaged in the study of the labor problem is partially solved by the appearance of Professor Commons's 'Trade Unionism and Labor Problems' (Boston: Ginn & Co.). This is the second volume of the "Selections and Documents in Economics" now being brought out under the editorial direction of Prof. W. Z. Ripley of Harvard University. Professor Commons has gathered some twenty-eight selections dealing with most of the phases of the labor movement. He has drawn upon Government publications, periodical literature, and various monographs which could not otherwise be made available for large classes of college students, and has summarized the decisions of the courts in important cases relating to labor. The selections will supplement admirably the lectures and ordinary reference-books which have constituted hitherto the principal pabulum that teachers could set before their students, while it should prove of value to many readers who do not enjoy access to well-stocked libraries. Inasmuch, however, as the conditions of the labor problem, especially in the United States, are subject to such rapid changes, a work like this will require constant revision if it is to retain its usefulness for any considerable time.

'The Sociological Theory of Capital' (Macmillan) is the title which Prof. C. W. Mixter gives to his reprint of John Rae's 'Principles of Political Economy.' Rae's work, which originally appeared in 1834, professed to expose the fallacies of the theory of free trade and of some other doctrines taught by Adam Smith. Although noticed by John Stuart Mill and a few other economists, the book was long neglected, and is now resurrected, not for the sake of its criticisms of the 'Wealth of Nations,' but for its interesting discussions of the subject of capital. Professor Mixter, in fact, has taken the liberty of cutting out the chapters dealing with the theory of capital and making them the basis of the present volume, while consigning the rest of the original treatise to an "Appendix." We can only conjecture what the author would have thought of such a dismemberment of his *magnum opus*. Professor Mixter has gathered considerable information about Rae's life, of which little has been known hitherto, and has lavished editorial labor upon the present attractive volume. There is no question of the value and interest of Rae's discussion of the theory of capital, and it is well to have this part of the work put at the disposal of all students of economic theory; but the need of reprinting the chapters which Professor Mixter relegates to the appendix, seems open to serious question.

Richard Aldrich's 'Guide to the Ring of the Nibelung' (Oliver Ditson Co.) appears just in time for the Christmastide performances of Wagner's great trilogy. Mr. Aldrich has not endeavored to throw new light on these scores; but he has the advantage of coming last, and thus being able to benefit by the labors of others and giving an analysis which in completeness and usefulness surpasses those of his predecessors.

Women have almost ousted men from the field of fiction. In the realm of music mere man still holds his own, although the feminine tide is rising steadily. Musical compositions by women have hitherto been conspicuous for quantity rather than quality, though it is difficult to find any intrinsic reason why women should not write as interesting songs as they do novels, unless it be that their excessive devotion to personalities makes the musical idea slow in coming to them. Arthur P. Schmidt of Boston has issued a collection of 'Songs' by Theresa Holmes Garrison quite above the average, and affording pleasant hopes for the future of woman's activity in this field. It is dedicated to the late Lillian Bailey Henschel. The contents are grouped under four heads: Sacred Songs, Three Love Songs, Four Songs, Songs to be Sung to Children (these groups are published separately). The poems are by Sidney Lanier, Alice Freeman Palmer, Wendell Phillips Stafford, Thomas Bailey Aldrich, Josephine Preston Peabody, Sarah Pratt McLean Greene, and Abbie Farwell Brown. If it be asked to what school the composer of these songs belongs, it might be said that she appears to have made a sympathetic study of Brahms—that is, of his methods of expressing musical ideas. This is true particularly in the case of "Nightfall," which is one of the best songs in the collection. Others to be marked for excellence are "The House and the Road," "Windy Nights," and "The Candy Lion," a tragi-comic story for children, the last half-dozen bars of which are an amusing musical counterpart of the words "he's just a candy Roar, and might as well be dead." Other clever touches of the kind might be pointed out in these songs.

Mr. Charles Francis Adams has just reprinted in pamphlet form a paper, 'Some Phases of the Civil War,' recently read by him before the Massachusetts Historical Society. It is in substance a criticism of the fourth and fifth volumes of Mr. James Ford Rhodes's 'History of the United States.' Mr. Adams draws attention to an undoubtedly weak point in that valuable book when he attacks Mr. Rhodes on his neglect of the question of sea control, and will find many supporters in his contention that the control of the sea was a decisive factor, and that Sherman's march to Savannah broke the back of the Confederacy. The paper also contains an interesting discussion of Butler's influence in 1864. But Mr. Adams should not speak of Grant's campaign of the Wilderness as a "failure" without qualification. The war could not have been ended without a great reduction both of the numbers and of the extraordinary morale of Lee's army; and that much Grant did accomplish. The Wilderness and Spottsylvania made Appomattox possible.

Although not so famous as his younger brother, Alexander, Wilhelm von Humboldt was a distinguished scholar and statesman and a remarkably attractive personality. It was especially this latter quality that brought him into intimate relations with the most illustrious of his contemporaries in art and literature, and lends to his correspondence not only intense interest, but also great historical value. Several volumes of his letters have already appeared from time to time, and another, perhaps the most important, has just been published under the title 'Wilhelm und Karoline von Humboldt in ihren Briefen.' This first volume has been edited by Anna von Sydow, and is published in Berlin by Mittler & Sohn. It covers the period of their early life until their marriage in 1791, and will be followed by other volumes containing their correspondence until her death in 1829. Karoline von Humboldt (by birth Dacheröden) was a very gifted and lovable woman, who moved in the most intellectual circles of Weimar at that time. The warm friendship and familiar intercourse of the writers of these letters, especially with Goethe and Schiller, impart to them a peculiar value.

An exceptionally valuable contribution to the Russian university problem is furnished by the famous law professor, Prince Eugene Trubetzkoy of Kiev, in a "Sammelwerk" entitled 'Russen über Russland,' edited by Joseph Melnik and soon to be published by Rütten & Loening in Frankfort. By special permission, the Munich *Allgemeine Zeitung* (*Beilage* No. 253) prints the substance of Trubetzkoy's discussion. It contains a keen analysis and historic survey of the university troubles, dwelling particularly on that unique feature of Russian university life, the "students' strikes," and closes with the conclusion: "The Government itself has produced that chaotic condition in the universities which has developed the vitality and the power of the revolutionary organizations."

An entirely new collection of Bismarck letters is to be published in the near future by the house of Eduard Trewendl, Berlin. These date from the time when he was the representative of Prussia in Frankfurt. The selection was made by Bismarck while he was yet in office, and the correspondence will be edited by Heinrich von Poschinger.

It is becoming more and more evident that the "Posen Academy," which was established about two years ago for the purpose of offering lecture courses in German in the headquarters of Polish Prussia, is destined to become a full-fledged university, its chief purpose being doubtless to constitute a rallying-point for German scholarship and civilization in regions where these are endangered. During the coming winter semester, theological lectures will also be delivered by both the Protestant and the Catholic professors of the neighboring University of Breslau. With this, the beginning of the fourth of the regular university faculties has been made. Hitherto, all lectures have been delivered in rented localities, but appropriations have already been made for new buildings, with an aula seating twelve hundred people.

The University of Chicago Press announces the addition to its list of publications of two new journals, to be devoted to the interests of the ancient classics, viz.: *Classical Philology*, published for the University of Chicago, and the *Classical Journal*, published for the newly-formed Classical Association of the Middle West and South. The former will contain scientific articles and critical reviews; the latter, articles and reviews of a more general nature, with special reference to the needs of teachers.

The larger part of *Petermann's Mitteilungen*, number ten, is devoted to a discussion of the relations of the warmth of the waters of the inland lakes of Northern and Central Europe to the climate. Attention is called to the proposal to hold a congress

next year for the purpose of founding an International Association for Polar Exploration. Its object will be to devise means for reaching both poles, as well as to promote expeditions to increase our knowledge of the polar world in every respect. The curriculum of geographical instruction in the German universities for the coming winter semester, occupying nearly six pages, is most interesting and suggestive.

Haiti has awakened to a sense of her need of foreign aid in the development of her rich natural resources. A concession has been granted to two American citizens to construct a railway through the central part of the Republic, connecting Gonaives and Port au Prince. It will pass through the great mineral belt and forests containing some of the finest cabinet wood in the world—mahogany trees from eight to nine feet in diameter, satinwood, ebony, rosewood, and a fine quality of cedar. Authority has also been given to build a road by which there will be a continuous rail route from the capital to the northern coast at Cape Haiti, and opening up a large fruit and cotton-growing district. Our minister, Mr. Powell, reports that this is the most important concession that has ever been granted to foreigners.

President Peirce of Kenyon College, Gambier, O., advises us that the trustees and faculty "have secured a transcript of all the evidence offered at the inquest into the death of Stuart L. Pierson, a freshman at Kenyon College, who was killed by a railroad train on the night of the 28th of October while awaiting his initiation into the Delta Kappa Epsilon fraternity, and are about to publish the same as a complete and sufficient refutation of the coroner's verdict in the case and of the false and calumnious stories circulated concerning the students and authorities of Kenyon College." A copy will be sent to any address upon application to the president's office.

—The first part of the eleventh number of the "Bulletin of the Bureau of Rolls and Library of the Department of State" is a ponderous volume of more than 800 pages, and continues the "Documentary History of the Constitution." It includes papers and letters for the years 1786-1788, taken from the various collections, public and private, in the Department of State, and is intended to carry on the history of the Constitution upon the lines suggested in previous issues of the Bulletin. The plan cannot be considered judicious, and the performance promises to result in one of those formless issues that confuse rather than instruct. It was an excellent idea to print in an accurate manner the Debates in the Convention, the Constitution and amendments, and the formal official documents in which the States recorded their wishes and action. Such material is properly the documentary history of that instrument. In going outside of those papers, and making a collection of letters, or extracts of letters, miscellaneous memoranda, and reports upon matters only indirectly connected, if at all, with the Constitution, a grave error has been committed. About one-half the contents of this volume has appeared in a better form, in the writings of the fathers, where the letters are given in full and not in unrelated parts. Another quarter properly deserves no place in the work, and the remaining one-fourth, printed by itself, would have been a really useful and interesting contribution to the history of the Constitution. This all too bulky volume, without table of contents or index, is an example of what an historical publication should not be, much less a Government document.

—The contents deserve some attention. The arrangement is strictly chronological, even to separating the daily entries of a diary. The papers are drawn from the Washington, Jefferson, Madison, Continental Congress, and other collections, formerly in the Department of State, now in the Library of Congress. The "history" is thus not only limited, but very one-sided in its nature. However prominent Madison was in the Convention and subsequent discussion, his correspondence can give only a partial view. The letters coming to him from others afford a glimpse of what was thought and done in States other than Virginia, but only a glimpse. To complete the history on this extended scale would demand a like collection for each State, including the proceedings of the State conventions, the controversial writings of that time, and, above all, a reprint of the *Federalist*. Such a compilation would not be a proper function of the Bureau, and we can but judge the present volume to be as entirely outside its true function. The almost minute attention to typographical detail is more than offset by the omission of what might, historically, be the more important parts of the letters. A gathering of scraps, like this collection, is unsatisfactory in itself, and discourages a full publication under better conditions. The location of each paper is given, but that location only emphasizes the restricted lines on which the work has been conducted. A note telling where each letter has been published would aid the student in consulting the context, and so enable him to pass upon the selection made.

—Sir Robert Ball has placed the world of lay astronomers again in his debt by his 'Popular Guide to the Heavens' (London: George Philip & Son), with its series of eighty-three plates, accompanied by explanatory text and index. The text is divided into nine separate chapters, and presented where it is most useful, as nearly as possible facing the plates. That such a guide would lose much of its effectiveness if not brought down to date has constantly been kept in mind, and late results of planetary research are embodied, including the orbit of the useful little planet Eros and the newer satellites of Jupiter and Saturn. "It is sometimes a matter of discussion," says the author (p. 10), "how big a planet looks in a telescope of a given magnifying power. By means of this plate the question may be answered. The plate is drawn to such a scale that if it is placed ten feet from the eye, the figures of the planetary disks subtend the same angle as the planets' images themselves, at the corresponding phases, would do when seen in a telescope which gives a magnifying power of 80 diameters." Manifestly a useful plate for clarifying popular conceptions of planetary sizes. But astronomy progresses so rapidly nowadays that a book like this becomes out of date on publication, just as a warship is obsolete before she can be got in readiness for battle. For example, one may not look here for the newest found moons of the great planets, nor for the light thrown on the question of the canals of Mars by recent photographs of them. Douglass's excellent chart of Mars is given, and Barnard's Lick view of Saturn. The sun is exhibited in fine photographs of its spots taken at Greenwich, prominences both during eclipses and without, and various types of the sun's corona. Then we have a few beautiful plates of nebulæ and comets—among them the great comet of 1901—followed by twenty or more plates of the moon, most elaborately portrayed of all the heavenly bodies. Best of all are reproductions of three lunar pictures by Ritchey, late of the Yerkes Observatory, and most successful of all moon photographers. On one of them can be seen everything that the telescope will reveal under ordinary conditions. A feature of especial value in Sir Robert Ball's 'Guide' is one not elsewhere to be found—a series of tables for popular use by which the lucid planets can be located among the stars at any date this side of 1950. The star charts themselves are of an accurate, little distorted, and serviceable type; a few of the meteor radiants are appropriately marked thereon. Much space is given up to variables, and there is a full list of the new or temporary stars from Tycho to Turner. The work concludes with many singularly perfect photographs of the great nebulæ of the sky by Keeler, Ritchey, and Barnard, and the enigmatic moving nebula surrounding Nova Persei (1901) is shown at varying stages of its wonderful development. On the whole, this is the best work of its character yet published, and was worthy of much more careful proofreading of its text.

—The man who could invent so delightful and suggestive a title for his book as that of "How to be Happy though Married,' would not, on general principles, fail to be interesting when treating of 'John Chinaman at Home' (Charles Scribner's Sons). Under this heading, the Rev. E. J. Hardy, chaplain of H. B. M. forces at Hong Kong, has in thirty chapters sketched men and manners, society, and nature, in a country into which he did not penetrate very far. Wisely abstaining from pretence of scholarship or power of philosophy, he states things as he saw them in most engaging style. With his usual trick of phrase, he lures us on through chapter after chapter of Chinese characteristics, or he takes us on his travels, and points out the things most worthy of attention. When the bride comes to her husband's house and is lifted over the threshold on which charcoal burns in a pan, he is content to show that this use of fire "prevents her bringing evil influence with her," while his previous knowledge, both standard and occult, of the possibilities of joy in wedlock makes his chapter on betrothal and marriage a very lively one. He calls attention to the fact that the ordinary married Chinese woman does not in practice obey her husband much more than does the British, but she must obey her husband's father and mother. Nevertheless, however she may be regarded in theory, the Chinese woman possesses a knack of asserting her-

self in her own home, despite fist and bamboo. In other lines of inquiry and observation, wherein the author possesses special experience, as, for example, as chaplain, and in seeing others when he himself is supposed not to notice, he is especially interesting. He can tell us about both the outside and the inside of the pagan temple, and also of the missionaries, with whom naturally he has great sympathy. A spicy account of how the Chinese see us closes this fascinating work. To write so readable a book on China, in a vein both sympathetic and critical, is in itself no mean feat. Besides good English, print and paper, there is an index, not of the many bright things said in the text, but of persons and places; and the full-page illustration is liberal in quantity while reinforcing the text.

—Prof. Eugen Kühnemann's 'Schiller' (Munich: Beck) is likely to go down to posterity as the finest and most enduring monument of what the Schiller Centennial of 1905 has added to German life in spiritual energy and insight. Since, in 1844, Karl Hoffmeister for the first time presented a nobly conceived and adequately executed picture of the great idealist, there has been no lack of attempts to rewrite his life. Few of these attempts, however, have led to achievements worthy of Schiller's genius. The biographers were either popular rhetoricians, such as Palleske; or learned philologists, such as Minor; or literary virtuosi, such as Brahm; or they lacked—as, for instance, Weltrich—the sense of form necessary for producing a well-rounded whole. Perhaps the most readable among the more recent of these biographies are the books of Wychgram and Calvin Thomas; but the former is avowedly unoriginal, and the latter is, after all, the work of a man diametrically opposed in temper to Schiller's soaring enthusiasm, and therefore fundamentally removed from genuine appreciation of the best in him. In Eugen Kühnemann, Hoffmeister has found his first worthy successor; in him Schiller has found his great modern interpreter. Here is a man who combines in himself the intellectual keenness of the philosopher with the intuition of the poet, the impulsiveness of the orator, and the equipoise of the historian; a man who has lived with the great shades of the past, and who knows how to make them speak to us; a man to whom literature is one of the highest concerns of life, a revelation of the most elemental strivings of humanity, and who, therefore, in literary history traces the spiritual development of the race. In the hands of such a man literary biography acquires a new meaning; and it is not too much to say that in this Life of Schiller the great dramas, from the "Robbers" to "Tell," and the great lyric effusions, from the "Hymn to Joy" to the "Song of the Bell," for the first time stand out fully and vividly, not only as parts of Schiller's artistic development, but also as parts of the great spiritual movements which form the deepest and most significant note of modern history, and which connect the age of Rousseau and Shelley with that of Ibsen and Tolstoy. If literature were taught in our universities and colleges as this book teaches it, there would be hope for a strong reaction against the overweening influence of the philologist and the "Quellenforscher."

—We have just received a copy of the address read by Dr. B. P. Grenfell before the Egypt Exploration Committee, at their meeting of November 10. It relates to the excavations carried out at Oxyrhynchus by Dr. Hunt and himself, and to their prospective arrangements and publications. Last winter's work is to be described in detail in the forthcoming Archæological Report, and does not receive more than a brief mention. We are told that they dug for nearly four months, and finished clearing the northern part of the site, meeting with considerable success in so doing; on some occasions the yield was so great as to recall the palmy days of 1897. The great mass of papyri are found to belong to the first four centuries of the Christian era, but there is an admixture of earlier and later ones, including some Hebrew and Syriac fragments. As these cannot be later than the fifth century, they are held to be of great palæographical value. The excavators regret that out of the vast number of documents unearthed, many of them lengthy and well-preserved, there are so few classical and theological pieces, and that the Homeric papyri tend to predominate over those of other authors. But, on their own admission, they have been made exacting by past successes, and they are really well pleased on the whole with the results of their last season.

—The greater part of their space is devoted to their new volume, which is to come out in June of next year ('Hibeh Papyri,' Part I.). It will consist of the early Ptolemaic papyri from mummy cartonnage found at Hibeh in 1902. Among the more important of the new classical pieces are some tragic fragments, probably from the "Tyro" and "Oineus" of Sophocles, a comic fragment of sixty-eight lines, probably by Menander, and one by his contemporary, Philemon, from the play on which Plautus based his "Aulularia." Greek oratory is represented by some pieces from Lysias's speech against Theozotides, and philosophy by a discussion of Democritus's theory as to the constitution of the sea, to be assigned in all probability to Aristotle's successor, Theophrastus. Under the head of fragments from extant works are pieces from Euripides's "Alcestis," "Iphigeneia in Tauris," and "Electra," some three hundred lines from the treatise on Rhetoric addressed to Alexander, once ascribed to Aristotle, but now to Anaximenes, and several early Ptolemaic fragments from eight books of the Iliad and one of the Odyssey. These latter are specially important, as they throw additional light on the disputed question of the Homeric texts. Among non-literary papyri the first place is held by an astronomical calendar for Sais in about 300 B. C., with an introduction explaining the principles on which it is composed. The other documents include official and private letters, reports, contracts, tax-receipts, accounts, etc. This is the last time for the excavators to return to Oxyrhynchus. It is more than doubtful whether after this season they will be enabled to clear another town site, or (as they would prefer) to search for early Ptolemaic cartonnage like that found at Hibeh. The fact is that the Græco-Roman branch cannot afford excavations every year on its present income. If it were not for the contributions of various academical bodies (Magdalen and Queen's College, Oxford, and Trinity College, Dublin, have each given £50), it would not be possible to pay for the digging of the Roman mounds this winter and the publication of the Hibeh volume.

RECENT POETRY.

Some years ago there was published a "collected edition" of the poems of William Watson. With this volume the lovers of that sculpturesque poet—and they are many—were far from content. Many favorite pieces were rejected by Mr. Watson's fastidious self-criticism, and the arrangement was not always happy. Now, however, we have in 'The Poems of William Watson' in two volumes (The John Lane Co.) an edition that is nearly all that could be wished. The poems to be included have been selected and arranged by Mr. J. A. Spender, who has certainly been of service to the poet in considering, in the phrase of the introduction, "whether the poem in question falls into the general scheme, whether it illustrates the writer's thought and style, or the development of his thought and style—whether, in short, it lends itself to the total effect." The selection is fuller than in the previous collection, the arrangement simpler and more effective. Mr. Watson, with his admirable conscience and capacity in "lapidarian toil," has taken advantage of this opportunity to bestow many touches of creative revision upon his work. The result is a collection of poetry producing a "total effect" of classic finish, with much of classic simplicity, and something of classic strength; as promising a candidate for poetic length of days as this age has to show.

This is not the place to attempt an elaborate appreciation of Mr. Watson's fine achievement. Yet something must be said of the singularly clear and consistent impression of his quality that is conveyed through the reading of his work in this new selection and arrangement. Perhaps the first striking trait of Mr. Watson's poetry is its remarkable saliency of unerring phrase. "The strong, splenetic North," "the wizard twilight Coleridge knew," "an old and iterative world"—his work is jewelled with such felicities, but so close is the texture of the whole that the gems of phrase are not easily detachable. Yet there is a valid point of view from which such writing as this will seem not so much poetry as the perfection of imaginative criticism, of prose style. There is an impersonality of perfection in his rhetoric that is a little chilling to a century that has felt the subtle flame of Shelley and the romantic ardors of Keats, and known the heat of the furnace wherein Browning's gods and gargoyles were forged. One wonders, perhaps a little fantastically, whether if Watson had lived in the days of Queen Anne he might not have written such brilliant prose as Pope clipped into couplets, and whether if Pope had lived after the Romantics and Darwin he might not have been such another as Watson.

Masterly rhetoric, however, is but a superficial side of Mr. Watson's art. Beneath the verbal distinction of his style, beneath the limpid, cool cadence of his line,

beneath his harmonies of structure, there is a glow of poetic inspiration that merits, better than that of any other living poet, the high adjective Virgilian. He never has the fine frenzy, the rolling eye, of the Sapphic singer, and his least successful pieces are those in which he has tentatively endeavored to stimulate it. Yet, as the youthful poem "The Prince's Quest," which is included in the present edition, amply shows, he is no stranger to that world of romance and wonder and dream to which the modern mood owes so much. If, in the face of the disconcerting trend of modern thought and life, a poetic tone of sadness and reserve or ironic humor has seemed the better part, something of the dream has persisted. Through his lucid lines runs a human pity, an aspiration towards national righteousness, that touch the reader at last with a peculiar poignancy. Among his contemporaries he is best characterized by the line wherein old Cowley "placed" the Mantuan,

"Whose verse walks highest but not flies."

Among American poets the one most comparable to Mr. Watson in dignity of tone, in the seriousness wherewith the old cause of poesy is upheld, in a continuous attention to the national life of men, is Mr. Richard Watson Gilder. If his work lacks that last touch of restrained perfection which makes Mr. Watson's poetry of so enduring a texture, if his poetic thought is a little less penetrating and consecutive, he has in compensation a freshness of love for natural beauty and a gift of wistful melody, that are distinctive. In his last volume, 'In the Heights' (The Century Co.), despite the presence of some clever impromptus and sonorous occasional poems, the tone of the whole is of a more elegiac cadence than we have been accustomed to expect. Yet, not overlooking Mr. Gilder's admirable performance in odes and inscriptions, he is at his characteristic best precisely in such very personal pieces in a minor key as "Music in Darkness":

I.

At the dim end of day
I heard the great musician play:
Saw her white hands now slow, now swiftly pass;
Where gleamed the polished wood, as in a glass,
The shadow hands repeating every motion.
Then did I voyage forth on music's ocean,
Visiting many a sad or joyful shore,
Where storming breakers roar,
Or singing birds made music so intense,—
So intimate of happiness or sorrow,—
I scarce could courage borrow
To hear those strains: well-nigh I hurried thence
To escape the intolerable weight
That on my spirit fell when sobbed the music:
Late, too late, too late,
While slow withdrew the light
And, on the lyric tide, came in the night.

II.

So grew the dark, enshrouding all the room
In a melodious gloom,
Her face growing viewless; line by line
Her swaying form did momently decline
And was in darkness lost.
Then white hands ghostly turned, though still they toss
From tone to tone; pauseless and sure as if in perfect light;
With blind, instinctive, most miraculous sight,
On, on they sounded in that world of night.

III.

Ah, dearest one; was this thy thought, as mine,
As still the music stayed?
"So shall the loved ones fade,—
Feature by feature, line on lovely line;
For all our love, alas,
From twilight into darkness shall they pass!
We in that dark shall see them never more,
But from our spirits they shall not be banished,—
For on and on shall the sweet music pour
That was the soul of them, the loved, the vanquished;
And we who listen shall not lose them quite
In that mysterious night."

Though not escaping the calamities of injudicious praise, the new edition of Mr. Edwin Arlington Robinson's 'The Children of the Night' (Scribners) is a very pleasant little book. No minor poet of the day is less indebted to poetic conventionalisms than Mr. Robinson, or more securely himself. His literary obligations are for impulses not for patterns, and always in wholesome quarters—witness this fine sonnet on Crabbe:

Give him the darkest inch your shelf allows,
Hide him in lonely garrets, if you will—
But his hard, human pulse is throbbing still
With the sure strength that fearless truth endows,
In spite of all fine science disavows.
Of his plain excellence and stubborn skill
There yet remains what fashion cannot kill,
Though years have thinned the laurel from his brows.

Whether or not we read him, we can feel
From time to time the vigor of his name
Against us like a finger for the shame
And emptiness of what our souls reveal
In books that are as altars where we kneel
To consecrate the flicker, not the flame.

One of the most characteristic and striking of Mr. Robinson's gifts is his way of coining musical and suggestive names for his poetic characters—Luke Havergal, John Evereldown, Richard Cory, Aaron Stark, Cliff Klingenhagen, Fleming Helphenstine, Reuben Bright—each is a perfect symbol and almost a poem in itself, and they cling potently to the memory. Something of the same haunting individuality pervades all of Mr. Robinson's work, and makes it, even when least poetic, of a curious vividness.

A memorial volume of an unusually pleasant quality is the 'Poems of Arthur Macy' (W. B. Clarke). Mr. Macy was essentially the poet of good-fellowship. If such an impulse does not produce, in his own phrase, "Poetry with a big P," yet, when it is informed with a genuine warmth of sentiment, a Thackerayan humor, and a mellow morality, and is expressed with a clean music of phrase, it does possess a very comfortable and lasting appeal. The quality of Mr. Macy's work will be sufficiently evident in these stanzas of "The Old Café":

"Ah, those nights divine!
The simple, frugal wine,
The airs on crude Italian strings,
The joyous, harmless revellings,
Just fit for us—or kings!
At times a quaint and wickered flask
Of rare Chianti, or from the homelier cask
Of modest Pilsener a stein or so,
Amid the merry talk would flow;
Or red Bordeaux
From vines that grew where dear Montaigne
Held his domain.
And you remember that dark eye,
None too shy;
In fact, she seemed a bit too free
For you and me.
You know,
Don't you, Joe?" . . .

"And when we talked of books,
How learned were our looks!
And few the bards we could not quote,
From gay Catullus' lines to Milton's purer note.
Mayhap we now are wiser men,
But we knew more than all the scholars then;
And our conceit
Was grand, ineffable, complete!
We know,
Don't we, Joe?

"Gone are those golden nights
Of innocent Bohemian delights,
And we are getting on;
And anon
Years sad and tremulous
May be in store for us;
But should we ever meet
Upon some quiet street,
And you discover in an old man's eye
Some transient sparkle of the days gone by,
Then you will guess, perchance,
The meaning of the glance;
You'll know,
Won't you, Joe?"

Another memorial volume, of a curiously different character, is 'The Poems of Trumbull Stickney' (Houghton, Mifflin & Co.). The book is edited with a wealth of piety and a rather conspicuous poverty of taste by George Cabot Lodge, William Vaughn Moody, and John Ellerton Lodge. It is unfortunate that a young poet who was held before all else to be a Hellenist should be represented by many unfinished and imperfect pieces, and should be continually referred to as "STICKNEY" in small capitals. As a matter of fact, Mr. Stickney's Hellenism rarely partook of the classic spirit; it was rather of a romantic and wistful temper, and had more affinity with the "Celtic twilight" than with the bright outlines of Hellenic art. This, however, is by way of definition rather than criticism, Mr. Stickney had very rare and individual gifts of passionate imagination; had he lived and been able to attain to a mastery of form and of syntax, he would undoubtedly have been a poet to reckon with. The intensity of his talent can be, perhaps, no more adequately presented than in the little "dramatic fragment," suggestive of Blake, with which the volume concludes—a fragment which may well give the critic pause:

"Sir, say no more.
Within me 'tis as if
The green and climbing eyesight of a cat
Crawled near my mind's poor birds."

As an elegist in verse Mr. George Cabot Lodge avoids the indiscretions into which he fell as an editor. The twenty-five sonnets to the memory of Mr. Stickney which, under the heading "Death," make the third department of 'The Great Adventure' (Houghton, Mifflin & Co.), are admirably free from the cheaper trappings of the poetic lament, and are marked by a noble sincerity. Mr. Lodge is so able in the handling of the big, slow-rolling, sonorous word that he sometimes uses one a little loosely, or in an awkward position, and so dissipates somewhat of the energy of his conception; but for the most part there is a passionate rush to his thought that makes even a sesquipedalian—or a solecism—carry home. Nevertheless, a young poet so capable of passion owes it to himself to spare no pains in mastering the tedious details that concur to perfection, and not to chafe at the sackcloth of austere self-criticism that must lie under the singing robes of the true poet. Mr. Lodge is at his best in such strains as this:

Still on his grave, relentless, one by one,
They fall as fell the mystic, Sibylline
Sad leaves, and still the Meaning's secret sign
Dies undeciphered with each dying sun.
How shall the burning heart of Truth be won?
Whence shall the light of revelation shine?
When shall the mind's discernment grow divine?
Where shall the soul's immortal deeds be done?
What were the incommunicable things
Whereof his dying eyes were undismayed?
What were the words that stirred his strangling breath?
Sharply the night's impenetrable wings

Covered his eyes, and on his lips was laid
The inveterate taciturnity of Death!

'The Collected Sonnets' of Lloyd Mifflin (Henry Frowde) is a stately octavo volume of nearly four hundred pages that a little suggests Thackeray's well-known cartoon of Ludovicus Rex. Mr. Mifflin is at his best in the sonnet form. The restraint of the structure prevents him from falling very often into the too effusive sentimentality which we recently had occasion to note in speaking of a volume of his lyrics. Yet even here there are too many lines like

"At parting, pales pathetically pink,"

that give evidence of the indulgence of an ill-disciplined taste, and there is a lack of the weight that may be imparted to a volume of sonnets by a sprinkling of pieces expressing some moral indignation or high resolve. A little of Mr. Lodge's sincerity of passion would have helped Mr. Mifflin's book. Yet no recent collection of verse has been more instinct with the poetic love of beauty or has shown more ability at communicating it in verse. The two principal domains of Mr. Mifflin's Muse are the worlds of classical poetry and natural loveliness. Of the first this sonnet is typical:

Immortal laurel of no growth terrene,
Gather, ye Muses, in Olympian air;
'Tis for a shepherd, loved of Pan, to wear;
Behold him lying on the headland green
That juts above the sea in this demesne,
As still as sculptured marble, and as fair.
Ye will not wake him if ye crown him there;
Wreathe him the while he seems to sleep serene.
The syrinx now lies useless by his head. . . .
Was that a sigh within the cypress near?
Oh, soft, ye Muses!—softly round him tread,
Bring all your late reluctant garlands here;
Relax your haughty mien; ye need not fear
To crown this Dorian now—for he is dead!

Of the second, this:

Beloved Fields! from out your pure domains
Floats music softer than from viol strings;
Better the warbling of your feathered things
Than all the rolling organ's deep refrains;
What prima donna trills such liquid strains
As yon brown meadow-lark, that floating sings
Above her nest on slow-descending wings,
With plaintive sweetness that the soul enchains?
Not hers alone, but myriad notes there are
Too sweet for telling, where all sounds are sweet:
The delicate footfalls of the showery rains;
The breezes rustling o'er the sea-green wheat;
The murmurous voices, faintly heard and far,
Of children gathering cherries in the lanes.

It is a fair question whether, after all, the chief business of the minor poet nowadays is not the production of magazine verse. It is certain that only in the magazines is he secure of a market and a hearing, and we suspect that the total idealizing influence of the hundreds of pieces that find their way each month into the magazines has been under rather than overestimated by those who have written about it. For a score of years no American poet has contributed more constantly to the best magazines than John Vance Cheney, and none has been more uniformly conscientious in workmanship and poetic in tone. The selected collection of his 'Poems' (Houghton, Mifflin & Co.) is remarkable for its variety and readability. Mr. Cheney is in the main a poet of the fancy rather than of the imagination; occasionally he lets the fanciful lead him a little too far from the solid earth, yet his approach to life and to Nature is always marked by an individual flavor of ideality, and his expression is always musical and sometimes memorable. The range of his qualities is hinted in the effectiveness of these two dissimilar pieces:

TOAD.

I'm just about the color of mud,
I've a bobby mouth and a knobby back;
I bundle away, I tumble and thud,
I lack the knack of walking a crack.

I sit and think at the chink of my hole—
Nothing like flies for a plump, buff belly—
I rather reckon I haven't any soul,
Though I'm not altogether pebbles and jelly.

As soon as the roses I smell the rain,
I wink one eye when two wouldn't do;
I pad my ribs, and I don't complain.
I'm toad, but no toady—How about you?

THE ISLES OF QUIET.

The Isles of Quiet lie beyond the years.
Hoar prophets say it; yet, for all the tears,
I doubt the saying of the seers.

I think that whoso seeks them here shall find;
That all with open, patient heart and mind
Shall drink of peace from sun and wind;

Shall make their own the hymn of rest begun
When shadows say the summer day is done,
And sky and field are growing one.

Idler the fancy, closer it may cling;
Yet I believe the wide air's murmuring,
The sweet far song the thrushes sing.

It is a great pity that Mr. James Whitcomb Riley's publishers should persist in vulgarizing verse so fine as his by cheap and silly illustrations. In his latest volume, 'Songs o' Cheer' (The Bobbs Merrill Co.) Mr. Riley's poetry seems to have fallen under the evil spell of his embellishments. The pictures fail to effect the old starry sublimation of the commonplace that gave his early volumes an appeal so tender and pervasive. There is nothing in the book better than the little poem wherewith it closes:

Dear Lord! kind Lord!
Gracious Lord! I pray
Thou wilt look on all I love
Tenderly to-day!
Weed their hearts of weariness;
Scatter every care
Down a wake of angel-wings
Winnowing the air.

Bring unto the sorrowing
All release from pain;
Let the lips of laughter
Overflow again;
And with all the needy
O divide, I pray,
This vast treasure of content
That is mine to-day!

'A Southern Flight,' by Frank Dempster Sherman and Clinton Scollard (G. W. Browning), contains no piece quite at the highest level of either of its authors. There is somewhat too much of sweet in it, but it is full of melody and pretty imagery. "A Florida Night," by Mr. Scollard, is a fair sample of its quality.

The slender new moon seems as frail
As thin ice 'twixt November reeds;
A bird-note from a distant swale
Mounts and recedes.

A wan moth dips across the dusk
Like a magnolia's ghost, and then,
Amid the scent of rose and musk,
Is gone again.

The dews gleam beryl-wise; you come,
Your hair caught up in amber strands,
Life's bliss—its whole ecstatic sum—
In your white hands!

'Songs of America, and Other Poems,' by Edna Dean Proctor (Houghton, Mifflin & Co.), is a collection chiefly of patriotic pieces conceived with an admirable seriousness of mood, and elaborated with a good command of poetic materials, but without any very fresh distinction of inspiration. Some of the best things in the volume are among the "other poems." As is so often the case with minor poets, Miss Proctor is at her best poetically in writing of other poets. These stanzas to Emerson have perhaps more of melody and of imagination than anything else in the volume:

Monadnock calls the winds from peak to sea—
The clarion north wind and the full-choired west—
And bids the streams their cliff-born melody
Blend with the airy chants above his rest;
And wakes the pines to hymn his hundred years
In the weird symphonies he loved so well;
And listens—if perchance from starry spheres
Some echo of a kindred song should swell.

Poet whose lofty quest no creed could bar;
To whom the secret springs of life were known;
One with the wild rose and the evening star;
The mountain and the mart alike thy throne;
For thee, from Nature's myriad voices now
And the deep heart of man, ascends a pæan:
Pan was not closer to the earth than thou,
Nor Plato nearer to the empyrean!

The fall season's dramatic verse includes specimens of intelligent workmanship and sincere poetic feeling, but no piece of true dramatic quality or poetic distinction. "The Baglioni," by Henry Lane Eno (Moffat, Yard & Co.), is a bloody tragedy of the Renaissance, cast a little in the late Elizabethan manner. It is worth reading, if one has the time, as a vivacious portrayal of the Renaissance mood. "The City," by Arthur Upson, (Macmillan), has something of the cool charm that springs from the imitation of Greek models, together with appeal that inheres in a Christian theme. It never, however, attains any considerable tragic power. Mr. Bayard Boyesen's "The Marsh" (Badger) is a piece of rather shadowy symbolism, which has, withal, a continuity of poetic atmosphere that is distinctly of promise. Perhaps the most considerable of the dramas in verse which we have before us is the "Alcestis," by Sara King Wiley (Macmillan). Mrs. Drummond's treatment of the fable has no very novel features, but she has realized its mood very vividly, and made of it a compact and moving little drama.

BOOKS ON ART.

Professor Santayana's 'Reason in Art' (Scribners) is the fourth volume of "The Life of Reason," and is rather a work of philosophy than a book on art or even on æsthetics. The bewildered student of painting and sculpture, who is accustomed to look at concrete things, finds its abstractions and its dialect strange to him, and is likely to get little good out of it. Its philosophy may be admirable, but is unintelligible to one not a trained metaphysician, and its style seems constantly on the verge of a lucidity which as constantly proves elusive. Unfitness to understand it must be our excuse for the inadequacy of this notice, which may serve, however, to warn those generally or specially interested in art that it is not for them.

For such readers the most important book of the season is Mr. Isham's 'History of American Painting' (Macmillan), which has been looked forward to with interest for some time. Those of his acquaintance have long known Mr. Isham's exceptional fitness for his task. Himself a painter of respec-

table achievement and equipped with the necessary technical knowledge and the painter's point of view, he is also a man of unusual breadth of vision and of sympathy, of keen intellect and sound judgment, kindly of temper and with a genial humor, altogether honest, quite without jealousy, and as nearly without prejudice or bias as is possible to human nature. These qualities have made him an almost ideal member of exhibition juries, and, in addition to a mastery of clear, if somewhat colloquial, English, have fitted him better than any one else to write this book. It was expected to be good; it is even better than was expected. Though it has been some time in execution, it is not without marks of haste. The leisure hours of a painter in the active practice of his profession are not many. Therefore, there are here and there faults of proportion and perspective and slips of style which further revision would have eliminated; but these are of minor importance, and do not affect the value of the book.

The earlier chapters were, of course, the easier to write. The first American painters were of little importance to art in general, however important to us, and there is little need for criticism of them; but their lives were often picturesque, and the rather abundant anecdotes concerning some of them throw a vivid light on the conditions surrounding them—conditions which amply explain their failure to produce anything very valuable as art. So it is proper enough that the amount of space accorded to the treatment of the individual artist should sometimes seem to be in inverse proportion to the merit of his production. But it is in the later and more difficult chapters that Mr. Isham is at his best. To give something like a general view of the enormous contemporary development of American painting; to distinguish clearly the very varied talents of our painters, giving some notion of the peculiar excellences of each; to avoid monotony of praise and the perfunctoriness of the catalogue, and to avoid, equally, any cause of offence to living and working men, friends, acquaintances, colleagues of the author—such were the difficulties with which he has contended, on the whole, victoriously. The book is interesting to read now, and should prove of great value in the future. In its material get-up it is, to our taste, rather an ugly one, neither paper, print, nor binding being in the finest taste; but it has a wealth of well-chosen and generally well-executed illustrations.

Two books which it is inevitable that one should bracket together are Russell Sturgis's 'The Appreciation of Pictures' (The Baker & Taylor Co.), and Caffin's 'How to Study Pictures' (The Century Co.), for they are identical in purpose and intended for the gratification of the same appetite—the apparently illimitable appetite of the American public for formal instruction on matters of art. Mr. Sturgis is far better equipped as a critic than Mr. Caffin, having a wide first-hand knowledge of the subject and opinions of his own to express, while Mr. Caffin writes, mainly, as a compiler, taking his opinions ready-made where he can find them, and occasionally blundering in their interpretation in a way that would be impossible to Mr. Sturgis. And yet, in some ways, Mr. Caffin has produced the more satisfactory book of the two. He has shown shrewdness and *flair* in the selection of his authorities; and, as some one has written well on nearly every artist, he has been able to say pretty nearly the right and essential thing about each picture he treats of. Mr. Sturgis, writing his own opinions, occasionally gives us something new and therefore valuable; but when he treats of artists whose work is not particularly interesting to him, he is a little perfunctory, while he is always inconclusive and a trifle vague and incidental. There is never any doubt what Mr. Caffin is driving at, or of the relevance of what are pretty nearly quotations from the best available sources. There is often some doubt of what Mr. Sturgis would be at, or as to whether his remarks, however good in themselves, have any bearing on his general purpose. Mr. Sturgis's book is much the more stimulating to one already possessing some knowledge of the subject; Mr. Caffin's will perhaps be more useful to the beginner. Both will help in the spreading of some notion of what art is.

'The Art of the Venice Academy,' by Mary Knight Potter (L. C. Page & Co.), is a book of a kind that is becoming rather frequent, and the exact uses of which are obscure to us. If intended for consultation in the gallery itself, we can see no need of the long descriptions of pictures which are necessarily uninteresting and leave little room for criticism. If meant as an aid to memory, then every picture should be described, however briefly. If the history of schools and the criticism of particular works are the main issue, it had been better to disregard the accidental preservation in one place of the pictures to be discussed. However, this particular volume is well enough for its class. It is encouraging to perceive, from its pages, that Veronese is beginning to be treated, even in popular books of this kind, with something like the respect he deserves.

'Franciscan Legends in Art,' by Emma Gurney Salter (E. P. Dutton & Co.), deals far more with St. Francis than with art, and its interest will be for others than artists or art-students. We have found it rather dry reading from any point of view, but doubtless there are those who can profit by the information it conveys.

The increasing number of "series" of lives of artists under one or another general title involves ever new biographies of men whose lives have been already thoroughly written. Now and then, however, an artist less exhaustively treated of falls into the hands of a writer peculiarly fitted to deal with him, and the result is a book worth writing. Such is G. F. Hill's 'Pisanello' (London: Duckworth; New York: Scribners). We cannot altogether agree with Mr. Hill's estimate of the importance, as a painter, of Vittore Pisano—to give him his true name—but he was indubitably the greatest of medallists; and, indeed, the essential simplicity of sculpture in any form and the medallist's art in particular, and the consequent early ripening of this art in comparison with that of painting, are shown nowhere more clearly than in the way in which the equipment of a very primitive painter, and not the greatest of primitives, was precisely that of the prince of medallists; the art declining in the hands of his successors while the art of painting was developing to its most splendid triumphs. Though it is proved that Pisanello did exercise some real influence as a painter, it was by no means comparable to that of some of his contemporaries. It is his medals that interest us, and of them we were sure of a scholarly and interesting account from Mr. Hill.

'The Life of Constable,' by M. Sturge Henderson, in the same series, on the other hand, owes its existence solely to the exigency of its environment. It is well enough done, but there was no great necessity of doing it at all, and there is nothing in it that is not readily enough to be found elsewhere. Its most striking note is that of reaction against the perhaps excessive praise of Constable that has been common in recent criticism. Mr. Henderson sees in him a painter of genius, not without grave faults; whose influence has been less decisive than has sometimes been supposed.

Mr. W. L. Wyllie's Life of Turner, in "The British Artists' Series" (London: George Bell & Sons; New York: Macmillan), is a disappointing book. In his preface, Mr. Wyllie apologizes for adding another to the seven lives already existing, and confesses that he "has not the pen of a ready writer," but suggests that "an artist should be better able to distinguish and note the influences and beauties, the difficulties and limitations of another artist's work than a critic or a teller of tales." Unfortunately, his lack of experience as a writer has outweighed his technical competence as a painter, and while occasional bits show knowledge of painting and, above all, common sense, the book as a whole is rambling, ill-constructed, and inconsequent. The habit of introducing, every page or two, long lists of works exhibited for the year under consideration is particularly irritating, especially as all this information is tabulated in a catalogue at the end, where it belongs. On the whole, one will get little except from the abundant illustrations, which include a number of apparently literal transcripts from real scenes—things unexpected from Turner and often refreshing—and several reproductions in color of major works of the late manner. These last are, of course, not irreproachable, but they will give many persons an idea of Turner's intention quite unattainable from black-and-white illustrations.

That most magniloquent and inefficient of painters, B. R. Haydon, can hardly interest any mortal to-day as an artist, but he knew some of the most important people in the England of his time, including Wordsworth and Keats, who both embalmed his name in their verse, and there is a psychological interest in the study of his megalomania. So there may be a welcome for Mr. George Paston's 'Haydon and his Friends' (Dutton), from a public unfamiliar with the Autobiography, edited by Tom Taylor, from which the present volume is largely derived. Of Haydon's work at his best it is difficult to form a conception. Those who care to study it at his worst may find his "Napoleon Musing at St. Helena" in the Metropolitan Museum.

There seems no more need for a new life of Reynolds than for new lives of Turner and Constable, but a new life of Reynolds Mr. William B. Boulton has felt moved to give us (Dutton). Mr. Boulton is a thick-and-thin admirer of Sir Joshua's character as well as of his work, and perhaps it was

the feeling that Sir Walter Armstrong had been a little hard on the Knight of Plympton that prompted the present volume. He will hear nothing of any coldness of heart in his hero, or of any other failing, even the slightest. He finds infinite pathos in the baldest memoranda of the pocket-books, and discerns everywhere a nature as lovable as it was undoubtedly admirable. The only thing he regrets is that the Discourses were ever written, with their apparent contradiction of the practice of their author.

In this respect his view is diametrically opposed to that of Mr. Roger Fry, who thinks that Reynolds's Discourses are still admirable criticism, and need only to be disembarrassed of some misunderstandings, due to an antiquated method, to appeal more strongly to the artist of to-day than to the intermediate generations—the generations of revolt. He has had the excellent idea of reprinting the Discourses with notes and illustrations, and the new edition is brought out by the publishers of Mr. Boulton's biography. Mr. Fry's contributions, whether in the shape of contradiction, reinforcement, or explanation, are always able and intelligent, and the reproductions of pictures mentioned by Reynolds, often unfamiliar to this generation, and of others which illustrate in a general way his disquisition, are an illuminating addition. Those to whom our modern essays in great decorative painting have brought the conviction that there is, after all, something like "the grand style," may care to reread Reynolds, and to those who do care to reread him, this edition may be recommended. To us the rereading has brought the conviction that the one artist of the nineteenth century who most consistently practised the grand style, and whose way of working and thinking most exactly coincides with that taught and praised by Sir Joshua, is one whose subject-matter would, likely enough, have seemed to the President of the Royal Academy contemptible; we mean the painter of peasants, Jean François Millet.

SIX NOVELS.

The Carlyles. By Mrs. Burton Harrison. D. Appleton & Co.

The Northerner. By Norah Davis. The Century Co.

The Romance of the Milky Way, and Other Studies and Stories. By Lafcadio Hearn. Houghton, Mifflin & Co.

In the Land of the Gods. By Alice Mabel Bacon. Houghton, Mifflin & Co.

Contrite Hearts. By Herman Bernstein. A. Wessels Co.

The Sa-'Zada Tales. By W. A. Fraser. Charles Scribner's Sons.

Reminiscences of Virginia in war time have formed the substance of many of Mrs. Harrison's stories, none of which reproduce her impressions of those sorrowful days more vividly than does her latest novel, 'The Carlyles.' The opening chapters describe the South in her death-throe, the evacuation of Richmond and surrender at Appomattox. And the implication (by overzealous detectives) of Col. Launcelot Carlyle in the conspiracy to murder President Lincoln carries an historical interest to the end. The Carlyles and most of those who share their vicissitudes are not of this present day and generation. They are old-fashioned gentlefolk, simple, yet rather stately, gracious in prosperity, and proud enough to face dire calamities without a whimper. Perhaps old Virginia was not so thickly populated with the brave, loving, and true as her literary children believe; but to have created the accepted tradition, the instinct of society must have been good, and social relations established on admirable principles. To a modern society, based on self-interest and self-advertisement, a picture of life actually conducted with deference to fine ideals may appear futile, even ludicrous. The day may come when it shall be altogether legendary, when a radiant being made up with the charms and virtues of Monimia Carlyle and her honorable sisters *de race* shall live as the heroine of a national epic. To-day the real is still recognizable in Monimia, and many are still alive to sympathize with her as with one of their own flesh and blood. As a contrasting figure to the gentle and faithful Monimia, Molly Ball, a notorious Confederate spy, is effective. She is of that never extinct Amazon brood that springs from sleep at the trumpet's call, and finds scope for energies unsuspected in times of peace. Her post-bellum adventures in Europe afford a glimpse of Paris in the late sixties, and of the motley, tinkling court of the Second Empire. Mrs. Harrison's drama, on the whole, rather escapes control. The several parts, though not unrelated, are not smoothly connected, and, in the later chapters, the charming heroine is seriously neglected for metal less attractive.

From all accounts the lot of a strenuous Northerner in a Southern town is often a most unhappy one. The 'Northerner,' Mr. Gregory Falls, whose trials as manager of the Power and Passenger Company of Adairville, Ala., are narrated at length by Norah Davis, was so venomously persecuted that after a long, hard fight, he was obliged to abandon his experiment, and could even rejoice that he escaped with his life. The author's erratic way of skipping between business and pleasure makes it doubtful whether society ruined Mr. Falls, the "electric man," or whether social suspicion and ostracism resulted from contempt for his occupation. Probably it was a case of action and reaction. What comes out clearly is that an honest, courageous, educated man was annoyed and swindled by a band of ignorant, unscrupulous ruffians; snubbed and slandered by silly women. It may be hoped that Adairville is not a typical Southern town, but an exceptionally benighted one. The novel affords intrinsic evidence that Mr. Falls's experience is not an imagined one, and that the author belongs to Dixie. The heroine, Joan Adair, has some of the grace of the old South, with an independent mind and combative spirit added to distinctly feminine charms and virtues. The serious questions of the Northerner are vigorously stated, and some characters and scenes very forcibly presented. The construction is bad, and there is a lot of tiresome talk. One is often uncertain about what is being done, and why and by whom. The author seems to assume in the reader an understanding of conditions equal to her own, and an intimacy with the inhabitants of Adairville beginning, like her own, at birth. In consequence, the poor reader flounders through the book in a state of confusion and despair similar to that of a stranger thrust into a circle where each man addresses the other by his Christian name, and where the talk is exclusively local and domestic.

To have had their myths and legends introduced to the English-speaking world by Lafcadio Hearn in itself constitutes a claim for the Japanese to be regarded as a fortunate people. It may be believed that he made Japan his home not only because the people attracted his sympathy and imagination, but because they afforded the best subjects he had found to write about—subjects most suited to his delicate and careful style. He thought a great deal of his style, and seldom wasted it on unresponsive material. 'The Romance of the Milky Way' is both an interesting study in folk-lore and a charming fairy tale, and the last passage beautifully illustrates subject inspiring style and style elevating subject:

"Perhaps the legend of Tanabata, as it was understood by those old poets, can make but a faint appeal to Western minds. Nevertheless, in the silence of transparent nights, before the rising moon, the charm of the ancient tale sometimes descends upon me, out of the scintillant sky—to make me forget the monstrous facts of science and the stupendous horror of Space. Then I no longer behold the Milky Way as that awful Ring of the Cosmos, whose hundred million suns are powerless to lighten the Abyss, but as the very Amanogawa itself—the River Celestial. I see the thrill of its shining stream, and the mists that hover along its verge, and the water-grasses that bend in the winds of autumn. White Orihimé I see at her starry loom, and the Ox that grazes on the farther shore; and I know that the falling dew is the spray from the Herdsman's oar. And the heaven seems very near and warm and human; and the silence about me is filled with the dream of a love unchanging, immortal—forever yearning and forever young and forever left unsatisfied by the paternal wisdom of the gods."

Besides the Milky Way, the volume contains a chapter on "Goblin Poetry," with some examples in the original and in translation, several folk-tales, an interesting letter from Tokyo in war time, and (unexpected conjunction) a tribute to Herbert Spencer, called "Ultimate Questions." The passages in this chapter on the terror of Space, felt by both Spencer and Hearn, further illustrate the author's keen sense for the subjects he could make the most of.

In the preface to a volume of stories of Japan entitled 'In the Land of the Gods,' Miss Bacon refers her readers, for a "fuller understanding of the mysteries touched upon in this volume" to the works of Lafcadio Hearn, feeling herself but a stranger on the threshold of the land he had entered and possessed. Yet her book needs no apology. Her desire is to illustrate the spiritual force of the Japanese and to show their belief in the continuance of life after physical death. For this purpose she narrates folk-tales and tales told to her as true, which, while subserving her chief intention, depict modern life, including even stories of the recent war. All are worth telling, extremely well told, and full of interest both for children and for their elders.

'Contrite Hearts' is a simple, affecting tale of Russian-Jewish life. To people who take their religion lightly, there is something very foreign, almost incredible,

in the representation of a community whose every act has reference to its faith. Yet Mr. Bernstein's story of the Lampert family, born and bred in poverty, and pursued by unmerited disaster, brings home to understanding and belief the reality of life lived, as it were, in the actual presence, under the very eye, of God. America is the promised land, the Zion, of the Lamperts and their kin, and one feels that, after cruel separation, a reunion even in a tenement on East Broadway is justly an occasion for rejoicing and looking forward to happiness.

Since Mr. Kipling wrote the 'Jungle Stories,' the talking beast or bird has been much the fashion; he has moved on from an ancient and honorable position in fairy-lore to a questionable place in presumably more veracious literature. A man may not become witty or wise by the device of uttering himself through the mouth of a monkey or a cockatoo; on the contrary, he may the more easily reveal himself as a mere chatterer. Such misfortune has not, however, overtaken the author of 'Sa-'Zada Tales,' who, though not a brilliant story-teller, is interesting, and apparently knows a great deal about the creatures that he presents to us. Children especially may be both amused and instructed by the night-talks in 'Sa-'Zada's "Animal City," and cannot fail to be delighted with the excellent portraits of the furred and feathered guests invited to the "swarry."

The Silken East: A Record of Life and Travel in Burma. By V. C. Scott O'Connor, Comptroller of Assam. With 400 illustrations, including 20 colored plates by J. R. Middleton, Mrs. Otway Wheeler Cuffe, and Saya Chone. Two volumes. Dodd, Mead & Co. 1905.

We had always supposed that the Silken East was China, but Mr. O'Connor reminds us at frequent intervals that his title is not inappropriately bestowed upon a land whose village peasants go clad in serica and whose "silken tread" is softly heard on every side. In these bepictured volumes the author really gives, as he says it is his hope to do, a vital impression and living picture of the most picturesque province of the British Empire. Perhaps, considering how westernized is the Japan of to-day, one is even justified in saying that Burma is the most picturesque country remaining for the Western traveller to visit. Mr. O'Connor evidently thinks so, and the present work seems to substantiate such a claim. It is one of impressions for the most part, only enough history and geography being introduced to orient the stranger. Under the author's skilful hand, the reader becomes, as it were, a traveller by proxy. He starts with Rangoon, studies its streets and monuments, then voyages over the long course, nine hundred miles, of the Irawady, and so reaches and explores its greatest tributary. After these views of river and bank, follow impressions of the Delta, the southern coast, and Moulmein; then (for it is a fluminous country, and the trip is mainly by water), the Salwin River, once the boundary of British territory, is visited, after which comes an excursion on the Yunzalin River, "beautiful, inscrutable, a mystery asleep"; and, finally, a march over the hills of the great watershed, where shelter is rare and food scarce, till these lead down to the Sittang, and so to the fields where lie hid the finest rubies in the world, to be had for the picking. It is a sufficiently gorgeous panorama of silk and sun, a picture-show of a happy land as seen from without; and the profuse and beautiful illustrations seem but a part of the verbal scenery furnished by the author, who has indeed an admirable knack of curt and clear description.

How charming and lifelife, for instance, is this riparian sketch:

"We stop at little villages by the way, to pick up passengers; and the village girls come down to the ship's edge, with trays of green papayas and red plums, bosom deep in the river; and they laugh as they sink yet deeper in the efforts to reach the passengers on board. Each of these, leaning forward over the rails, takes what he needs, and puts the price into a little cup in the middle of the tray."

Again, at Moulmein pagoda:

"Overhead the bells tinkle and palm-leaves rustle in the wind. The pagoda is built upon the summit of the hill, and the world that expands from it is of rare and great beauty. From where these people are seated at prayer, there is unfolded between each of the golden pillars and the carved leaves of the *tazoung* [chapel] a picture of wide plains, yellow with the ripening harvest; of green under the shelter of great trees, of winding rivers and straight highways, of mountains flung in fantastic forms on the level spaces. From the town below, a stream of worshippers flows up and down the steep, winding stairs: old men, who laugh at each other for getting blown; pretty women in silks of delicate hues; and flower-like children who climb, holding their sandals in their hands out of reverence for the sacred place."

But it is on the temple of Rangoon, the famous Shway Dagôn pagoda, that the author lavishes the most elaborate and loving description. He studies it historically, mathematically, first from one gateway, then from another, and one can scarcely follow him without sharing in his enthusiastic praise of this great rival of the Taj, which, placed upon an eminence itself 166 feet above the city, rises farther to a height of 368 feet above the hill; a bell-shaped structure terminating in a spire of gold crowned with jewelled vane and *hti*, the latter being a canopy of gold and iron hung with hundreds of gold and silver bells, which, large as they are, cannot be seen from the pagoda base, "but their music can be heard in the night watches, when the wind blows amongst their silver and golden tongues." This pagoda has no interior. It is a monument only; but the platform at the base has a perimeter of nearly 1,400 feet, and this is the place of worship.

Though native art is still in its infancy, it is already being killed by Western competition. So, too, the life of these merry, polite, good-natured souls is changing to meet the stress of the West. A certain value beyond the surface-work, which might easily be dismissed as merely artistic, is thus lent to Mr. O'Connor's volumes. He has lived with the people for years; he knows their hearts as he knows and pictures their life in town and country. But what he writes of the people will soon be of historical value. Conditions change rapidly when once the British Rāj and the Manchester shop take the place of the native priest and the hand loom. But whatever may be the outcome of the contact of races, this book, even without the future historical value which we think it will possess, is a delight to the eye and a pleasure to the mind—we wish we could add anything but a discomfort to the hand. For a volume of little over 400 pages a weight of three and a half pounds seems preposterous. Recent American books contrast unhappily in this one regard with books of English make, the delightful lightness of which, scarcely two pounds to a book of 400 pages, silently condemns the heavy load which the American publisher forces his customer to hold. There is a good map appended to the first volume, but the names therein are not all spelled as they are in the text.

A History of the Civil War in the United States, 1861-5. By W. Birkbeck Wood, M.A., and Major Edmonds, R.E. Putnams. 1905.

The reviewers of this book are apparently expected to surrender at sight, for it is armed with a piece of very superior heavy ordnance in the shape of an introduction, in large type, by Mr. Spenser Wilkinson. In this introduction Mr. Wilkinson tells us that "the technical aspect of the war has been sufficiently explored by a great number of professional writers of several nationalities. The writers of this volume, therefore, have had the benefit of abundant preparatory labors. They may be trusted for the accuracy and completeness of their story." It may be ventured, notwithstanding Mr. Wilkinson's large print, that each and all of these statements are absolutely incorrect.

In the first place, it is a most curious fact that an event of such proportions as our civil war has resulted in so little good literature; the quantity is enormous, the quality is bad. On our side we have produced a few volumes of memoirs, a fragment of a military history by Ropes, and two or three other books that are of serious value. Abroad, the Comte de Paris, one or two Germans and an Englishman, the late Colonel Henderson, have given us notable works; but, even among these, Henderson's 'Stonewall Jackson' stands preëminent as a technical study, and only Ropes can be compared with it for value, though his judgments are often prejudiced and crotchety. It is certainly very far from being the case that we are well equipped with technical histories of the war; we have at most three or four good ones, and they cover only a small proportion of the campaigns.

Then, again, we are informed, *ex cathedra,* that the authors have had the benefit of abundant preparatory technical labors. If this means that, finding a vast literature of the war in existence, they have availed themselves of the best of it, the statement cannot be accepted. Making every allowance for the brilliant work of Henderson and Ropes, there is an even more valuable source of information, and that is the Official Records. The authors state, indeed, that they have utilized the Records, but their work shows little sign of it. It is obvious, as one turns over page after page, that the book has been nearly entirely compiled from Henderson, Ropes, the Scribners series and the 'Battles and Leaders' series. In short, sufficient work has not been put into the book to warrant any such claim as Mr. Wilkinson makes for it.

And, lastly, it is not the case that the

authors may be trusted for "accuracy and completeness." The insufficiency of their knowledge, both of the Official Records and of things American in general, crops out constantly. Space forbids an extended statement of their shortcomings, but enough may be gathered from the following examples to show the character of their work.

In dealing with Chancellorsville, we are told that Stoneman's raid proved quite ineffective—which is true—and that it "had no influence at all upon the fortunes of the campaign"; but Henderson declares that "Stoneman's absence had proved the ruin of the Federal army." If Johnston failed as he did at Seven Pines, it was entirely owing to his faulty orders and insufficient staff arrangements, yet these are described as "admirable." Our authors believe that the hostility between this Confederate general and Jefferson Davis originated at Bull Run; it was really antecedent to the war. Again, when criticising Johnston's position at Dalton, no mention is made of the fact that it was held not with a view to defensive but to offensive operations. With McClellan the authors are even more unfortunate. We are told that "the failure of McClellan's campaign [in the Peninsula] is largely to be attributed to the action of his Government in withholding from him for the second time his First Corps." If there is any campaign in all history of which the result may be put down purely and simply to superior generalship, it is the campaign of the Peninsula. McClellan always outnumbered Lee by at least 3 to 2, and if he was beaten, the essential reason was not that his numbers were insufficient, but that he had neither the courage nor the genius of his opponent. As to the proposed removal of Thomas from command before Nashville, the halting and inaccurate statement put forward on the authority of Cox could very easily have been rectified by consulting the Official Records and Grant's 'Memoirs.' The latter, by the by, does not even figure among the authorities. On larger questions the quality of the book remains about the same. Thus, we find the North and South conveniently labelled Plutocracy and Aristocracy; and the task of the North is compared with that of Napoleon on entering Russia in 1812. The comparison is too obviously false to need extended criticism. Napoleon had no intention of conquering Russia, and he had to deal with an alien race and an exotic civilization. The North had the absolutely different problem of reëstablishing preëxisting conditions in the conquered country. It must be added that the maps are inaccurate.

The above criticism would have been less severe had less been claimed for this book. With more modest pretensions, some commendable features might have been pointed out. The authors are scrupulously fair; they have succeeded in compressing the history of the civil war into one moderate-sized volume; they have kept a good proportion in their narrative. But they very certainly have not, as Mr. Spenser Wilkinson would have us believe, produced an authoritative military pronouncement on the subject.

The Evolution of Man: A Popular Scientific Study. By Ernst Haeckel. Translated from the fifth German edition by Joseph McCabe. Two volumes, illustrated. G. P. Putnam's Sons. 1905.

Few serious works on popular science have been more widely read than Haeckel's 'Anthropogenie' and the various translations of it which have from time to time appeared. Haeckel's popular expositions of the theory of evolution were written with the avowed purpose of introducing the general public to a philosophy of nature, and have had a wide influence in stimulating interest in natural history. Unfortunately, he obtrusively adopted the style of the special pleader and propagandist, often giving offence where a more tactful treatment would better have served his purpose. Professional zoölogists, too, while recognizing the great importance of Haeckel's contributions to science, cannot recommend to their pupils without reserve an embryological authority who has only contempt for the brilliant achievements of His in human embryology and of the younger generation of experimental embryologists, and whose dogmatism on disputed points is often very repellent.

The two volumes are sumptuously got up, both text and illustrations contrasting very favorably with the earlier translations of Haeckel's works which have appeared in America. Of the rendering we cannot give so unqualified commendation, since numerous misprints and mistranslations show evidence of both carelessness and unfamiliarity with the technical vocabularity of the subject. We find, for instance, *Amphioxus* referred to as a mammal, the word "ventral" for neutral, the hypophysis defined as "a urinary appendage in our vertebrate ancestors"; and two plates showing the comparative forms of the pinna of the ear are designated "ear-muscles," a mistranslation of the German *Ohrmuscheln.* These defects, however, are not very numerous, and do not often seriously impair the value of a translation which is on the whole excellent. Though the centre of biological interest has in recent years shifted somewhat away from Haeckel's point of view, this revision of his most widely known work will long serve a useful purpose, both among general readers and among zoölogists, as a convenient summary of a vast wealth of fact and theory regarding the exact lines of animal descent.

Life and Matter
An Answer to Haeckel's "Riddle of the Universe."
BY
SIR OLIVER LODGE
Crown octavo, net, $1.00. By mail, $1.12.

The author fully acknowledges Haeckel's service to scientific thought in introducing Darwinism into Germany, and he admits that to advanced students Haeckel's writings can do nothing but good. He believes, however, that to some general readers they may do harm, unless accompanied by a suitable qualification or antidote, especially an antidote against the bigotry of their somewhat hasty and destructive portions.

Just Ready. By the Author of "Manchu and Muscovite."

The Re-Shaping of the Far East

By B. L. PUTNAM WEALE

Author of "Manchu and Muscovite."

Two octavo volumes, in a box. Illustrated from photographs. Those representing war scenes were supplied by the Japanese authorities for this work. *Cloth, $6.00 net*

In his first book, written before the war, he revealed the true position of the Russians in Manchuria, and forecasted the course of the struggle with an accuracy which has since aroused much comment.

"By far the most valuable contribution to the study of Far Eastern affairs that has appeared in England for a decade."—*Daily Mail,* London.

"Unusually interesting and suggestive."—*Times,* London.

"Valuable and illuminating."—*Spectator.*

"A remarkably interesting book . . . to be relied on absolutely as to the facts."—*Daily Evening Transcript,* Boston.

In the present work the entire situation in the Far East is dealt with as concerns Japan, Korea, Manchuria, and all the northern provinces of China. It is a readable summary of the political history of the last ten years in those countries, and explains fully how they have become entangled with each other and with rival European nations. Explanations are ample and lucid, while the whole has the genuine atmosphere of the East.

Of its illustrations the *Chicago Tribune* says:

"Being absolutely photographs and not works of the imagination, they are of extraordinary interest and value."

The Re-Shaping of the Far East *Price, $6.00 net*

AN EDUCATIONAL DIRECTORY

I.—The NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in the NATION has been a representative one for many years. It includes cards of many of the most prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Important Macmillan Announcements

READY JANUARY 5

The Life of Lord Randolph Churchill

By WINSTON SPENCER CHURCHILL, M. P.

When it became known that Mr. Churchill was engaged in writing a book dealing in an exhaustive manner with the brilliant career of his father, the liveliest anticipations were aroused in all circles where an interest is taken in the public life of England. Lord Randolph Churchill occupied so conspicuous a position among his contemporaries in political life, and impressed his personality so effectively on the public mind of his time, that it was immediately recognized that a book dealing adequately with his career, by a writer who in his turn has achieved distinction both as author and politician, must possess more than ordinary interest for English readers.

The two volumes will contain more than eleven hundred pages; several portraits and some other illustrations will be included. *Price of the set, $9.00 net*

By Mr. F. MARION CRAWFORD. Illustrated by JOSEPH PENNELL.

Two volumes in a box, crown 8vo, $5.00 net. Carriage extra

The book presents in attractive form all that is stirring, picturesque, and memorable in the history, art, and architecture of Venice and the life of its people.—"Even better than the book on mediæval Rome does 'Salve Venetia' reveal Mr. Crawford's splendid gift as historian, as a medium for the dramatic presentation of the chronicles of a wonderful community." (*Record-Herald, Chicago.*)—"An ideal book about Venice." (*New York Tribune.*)—"Venice affords Mr. Crawford full opportunity for the exercise of his great power of dramatic presentation, and for graphic descriptions of bygone scenes which throb with life and reality." (*Boston Herald.*)

READY JANUARY 17

Pre-Raphaelitism and the Pre-Raphaelite Brotherhood

By WILLIAM HOLMAN HUNT, author of "The Life of Williamson," etc.

Two volumes. Richly illustrated. $6.00 net. Carriage extra

Great interest has been aroused in all art circles by the announcement of this profoundly interesting contribution to the history of British art. The work will be uniform with the "Memorials of Edward Burne-Jones," published last fall. It will be devoted to the lives and work of that band of men who did more than any other to restore life and vitality and meaning to English art during the last century. "I trust," writes the author, "that my story of the private life of these men of genius will glorify them not less than those more ceremonious histories of their career, in which they appear as it were in stiff brocades and fine coats, donned to fence them from the eyes of the vulgar." The author was one of the three founders of the Pre-Raphaelite Movement.

READY LATE IN JANUARY

A History of the Inquisition of Spain

By HENRY CHARLES LEA, LL.D. In four volumes, 8vo, to be issued at intervals of about six months.

The price of Volume I., to be issued late in January, will probably be $2.50 net

The standing of Dr. Lea s "History of the Inquisition of the Middle Ages," which has been translated into both French and German, gives assurance that this work will take a permanent position as an authoritative and dispassionate account of an institution which possesses perennial interest, whose history extended over nearly five hundred years disastrous to the glory and prosperity of Spain.

NOW READY

The Modern Trust Company

By F. B. KIRKBRIDE and J. E. STERRETT, C.P.A. *Cloth, 309 pp., $2.50 net (postage 17c.)*

This is the first book to give a full and consistent description of the various lines of work in which a modern trust company engages. It discusses the duties of trust company officers and the relation of trust companies to the banking community and the public.

THE MACMILLAN COMPANY, 64-66 Fifth Ave., N.Y.

The Nation.

NEW YORK, THURSDAY, DECEMBER 28, 1905.

The Week.

In his dealings with the Panama Commission, President Roosevelt has gone far towards justifying Senator Tillman's description of him as an undeniably "patriotic man," who yet allows no obstacles of legality or propriety to deter him when bent on doing something. So bad an impression has his latest way of rushing to his goal made upon the Senate, that not one friendly Senator was found to make objection when unanimous consent was asked to have all of the President's Commission appointments recalled and held under consideration. The whole affair is in a sad tangle. At the very moment the President is trying to fill the Commission, a bill is actively pushed to abolish it altogether. In such circumstances, Mr. Roosevelt's nominees may well feel like the Lord Chancellor out of office, who, when asked what he had to say about "the situation," replied that the main evil of it was that he had no situation.

We have a fresh illustration of the sort of "ruler" who, as President Roosevelt said in his message, "sprang up" in Santo Domingo, and was wise enough to turn to the White House to "appeal to us to help"; and it seems to show that the "chaos" which Mr. Roosevelt said he was preventing has supervened. It has been asserted by American correspondents in the island that President Morales dared not leave the "seat of government," lest he fall out of that seat altogether, or be assassinated if he showed himself in public to his loving subjects. An adventurer such as he is must live in constant uncertainty what he will be doing next day; and if he has become persuaded that his fine scheme of sustaining himself in power by the aid of President Roosevelt is about to fail, nothing would be more natural than for him to run away. He is grandiloquently referred to as "General Morales" by some of President Roosevelt's supporters; but the man is, in reality, a renegade priest. He left the priesthood because he found the vows of celibacy irksome. After he had intrigued himself into the Dominican Congress, and before he had fought his treacherous way to the Presidency, he introduced a bill permitting priests to marry.

The only piece of benevolent Philippine legislation vouchsafed by the Fifty-eighth Congress was the bill providing for the construction of railroads. Bids have been advertised for, and some received, but on Thursday, Secretary Taft, after consultation with the Bureau of Insular Affairs and Gov. Wright, decided to reject all the proposals in hand, change the terms somewhat, and begin over again. Just what the competing offers were, or on what points they were unsatisfactory, has not been made known. Yet the task of allotting these contracts or concessions is not only complicated and difficult, but very much out of our line. Several of the proposed routes are laid out in undeveloped regions where immediate profits from operation are absolutely out of the question. Secretary Taft and the other Philippine experts were so sure of the unattractive character of the business proposition presented that they persuaded Congress to authorize a 4 per cent. guarantee of returns on the capital of the new roads. Undoubtedly, it would be easy to get bidders on some lines, but our purpose is defeated unless the whole network is constructed. The first attempt having failed, bids will again be opened in January, and contractors who are willing to forego the guarantee of profits, will be offered every possible other inducement. It is much better policy than that of the old-time prodigal land-grants, but paternalism and State-aid do not appear to mix well with cold business principles.

The most noteworthy feature of the relations between the United States and Tahiti in the past has been the annual payment of $45,000 for the transportation of ten mails a year—aggregating some 400 pounds of letters and 6,000 of merchandise and printed matter—to that delectable island. It was our impression that this $6.50 a pound rate was cut off last year and the figure restored to something nearer the $350 a year which we had paid for mail transportation by sailing vessel in the nineties. So it can hardly have been one of the subsidized steamships that brought the rumor to the French inhabitants that Uncle Sam was preparing to buy the island. The price mentioned, too, is extremely high: four million dollars for about 15,000 population is equivalent to $266 apiece, whereas we bought the Filipinos, in Reed's phrase, "for $2 a head, unpicked," and these are the last quotations we have on desirable islands. We should be exceedingly loath to disappoint the estimable Tahitians, but we fear that, with the Philippine Tariff bill on a snag in the House, Porto Rican citizenship still a matter for dispute, and our administration of its affairs under fire, this is hardly a propitious time to put through a bill paying for more insular possessions.

The commission appointed by the President last summer to recommend revision of the naturalization laws had no difficult task, inasmuch as it would be hard to propose any change in the present system that would not be a change for the better. Their report now made strikes first at the more obvious absurdities and inequalities. It has been unjust to the last degree that some courts should make it notoriously easier than others to attain citizenship, while it is simply ridiculous that the process should cost less at one place than another. The commission would make naturalization purely a Federal function, would issue a uniform certificate on petition three months in advance, and would abolish the two years' "declaration of intention" entirely. Naturalization is meanwhile to be restricted to persons who intend to remain permanently in this country and who understand the English language. As to the last proviso, there may be difference of opinion, for at least a plausible plea might be made as to the fitness for citizenship of residents of largely foreign-born communities here, who retain their mother tongue and yet take an interest in our affairs. It must be remembered, in this connection, how much the States themselves have done to give value to the certificate of nationalization. When it was possible for a man to vote in many Western States on his first papers, or no papers at all, strictness in the granting of final papers was not so necessary as at present.

There must be almost as much satisfaction in being called "game" and a "good fellow" by the President of the United States as in being appointed to a postmastership. At least, that thought is all the ex-postmaster of Kokomo, Ind., had for Christmas solace. On December 6, it will be remembered, announcement was made, in the customary unofficial way, of a new policy in reference to Presidential postmasters. "When the term of such an official has expired," so the plan was outlined, "he will be continued in the service if his record is reported to be 'good' or 'excellent.'" The man from Kokomo blunderingly supposed that such a case as his own was referred to. Even the Congressman who had recommended his successor spoke in high terms of his conduct of the office, and introduced him at the White House. "I wanted," he said modestly, "to understand the scope of the recent order." The President told him that the other man was to be appointed, and he said that he acquiesced. But, just for curiosity's sake, we should like to know what *was* "the scope of the recent order." To whom does it apply?

Does it apply to anybody? Why was it put out at all if the first case arising under it was to be decided in contravention of it? What *is* the existing policy regarding postmasterships? This case was apparently settled on the theory that postmasterships belong to Congressmen—the very doctrine which the President so effectively demolished only last year. Can it be that a general and immutable rule of conduct is not regarded as "practical" in the White House?

Another railway rate bill has been introduced in Congress, this one by Senator Dolliver of Iowa. The list of such bills is now long and imposing. Each, according to "intimations from high sources," has "the backing of the Administration." This is as it should be. Whatever bill, however amended, shall finally pass will be "the Administration bill." The failures will be credited to their self-sacrificing sponsors. Senator Dolliver wants each member of the Interstate Commerce Commission to receive $10,000 a year, instead of $7,500. The additional $2,500 is intended to persuade good men to serve, and thus to remove the objection that the Commission is "a refuge for the politically distressed." It is by no means certain, however, that the higher salary would produce the effect intended. Men of the right calibre take places on the Interstate Commerce Commission, as on the bench, not for the sake of the pay, but for the sake of the honor and the opportunity to perform an important public service. Some of the best men who have ever been on the Commission—Judge Alfred M. Cooley, for example—have accepted the lower salary. The distress of decayed statesmen and other bone-hunters would be rendered only the more acute by the sight of an extra $2,500 on which they might lay their prehensile fingers.

One indirect result of the Burton prosecution is the demand in Kansas that when next a Senator is to be chosen, the people may have something to say about it. Newspapers of the State are printing many letters from their readers urging that some such plan be agreed upon before 1907, when Burton's term expires. The Topeka *Capital* reports "a more general and wholesome popular interest than has been shown in a Senatorial election in perhaps twenty years." Most of the citizens who "write to the papers" on the subject propose that the next Senator be nominated by a party State convention, exactly like the candidate for Governor. Senator Hopkins of Illinois is a product of this plan, and also Senator Burkett of Nebraska, though in the latter State the candidates' names are also placed on the regular ballot, and thus subjected to the additional test of a popular vote. There are also advocates of choice of Senatorial candidates by the direct primary, a plan which has made astonishing progress in the past two years, though it has not yet had an actual trial in any Northern State. That Burton would not have been chosen by any popular vote may very well be true; we doubt if Platt could have been in this State. Yet it is probable that Mitchell could have secured his Senatorship in one way as well as another; and, in this State, Depew led his ticket when he was a candidate for Secretary of State. Popular election, in itself, is not enough to secure us first-class Senators.

The contest for Speakership of the New York Assembly is such a shifting battle that prediction as to the outcome is futile. One or two facts, however, stand out clearly. The first is that Gov. Higgins is not likely to be impeached for usurping the functions of the Legislature. Temperamentally, he is not a usurper. He prefers to throw responsibility on others whenever he can do so, and let them enjoy the glory for success or the blame for failure. Senators and Assemblymen who meekly took orders from Odell—who, under his command, left their thinking to be done by "wiser heads"—are not exactly the persons to lead a revolt against Higgins. The second fact which is now evident is that Gov. Higgins and the other opponents of the Odell machine would be in a much better position for fighting if their candidate had a stronger claim to the Speakership. Against Mr. Wadsworth's character and aims no one brings any serious charge; but his warmest friends cannot assert that in his single term this young man has manifested the intellectual and moral power and acquired the experience needed for a Speaker in this trying crisis. We trust he will develop the necessary qualities, but he cannot aspire to the office on the basis of proved strength. This is an argument which is now the only legitimate defence of the discredited and debilitated Odell organization.

Enthusiasts for Government control, as being supernally wise, efficient and safe, will not draw much comfort from the testimony of the State Superintendent of Insurance on Thursday. Mr. Hendricks confessed to a state of affairs in his department almost as shocking as the insurance looting itself. Ignorance of the law and of facts; indifference or incompetence, or both; inspections that were farces; examiners blind of both eyes; dictation by politicians—that is the kind of appalling admission drawn out by Mr. Hughes Inefficiency was never writ in larger capitals. The other horn of the dilemma is corruption. In either case, the shameful condition of this important branch of the State government calls for instant consideration by Gov. Higgins. He has amiably dawdled over it too long. Mr. Hendricks, by his own evidence, is no more fit to be State Superintendent of Insurance than a blind and deaf and toothless dog is to keep off chicken-thieves and burglars. The whole department needs a radical overhauling. A live and honest man must be put at its head, and the Platt and Odell dummy assistants replaced by somebody able to guard the policyholders' interests. With such a revelation of imbecility or venality on the part of public officials set to watch them, the insurance grafters must be astonished at their own moderation. They might have carried off the very buildings, and Hendricks would have seen nothing wrong.

Interest in the financial aspects of the transaction by which the Metropolitan system has been absorbed by the Belmont lines is, of course, all the keener on account of the price paid being as yet a secret. What all can see with half an eye, however, is the great importance of the combination from the public point of view. It is easy to say that the consolidation of all the city traction systems was "inevitable"; that a single management means greater economy, etc. But all depends upon the thing aimed at. If we have in the making a new engine of political power; if the intention is to confront the city with an intrenched and insolent monopoly, and to insist that all the new subway constructions be given to the Belmont interests on their own terms, the case is serious. It will be for the Rapid Transit Commission and the municipal authorities to exert all their power in behalf of the public. If it be said that no other company can build and operate a new subway because it cannot offer the facilities of connection and interchange which the Belmont lines possess, the reply is that those facilities are, in the long run, under the control of the city. The weapon of competition is not yet wrested from our grasp, because we can compel even a giant monopoly to allow a competitor to live. A corporation, however, vast, has not yet become our master. It is the power to regulate, to give orders that construction and operation of traction systems be for the public interest and convenience, which should be appealed to and exhausted before recourse to expropriation should be thought of.

Rumors are being industriously circulated that William Ellis Corey, president of the United States Steel Corporation, will be unanimously reëlected—possibly with a special vote of confidence. When the report was published that Corey was to be sued for divorce

by his wife, and that a widely advertised actress was involved in the affair, people began to say that the president of the largest industrial concern in the world should be a man of more stability of character. Then came dispatches from Pittsburgh intimating that Mr. Corey was prepared to fight; that if attacks were made on his private life, other people whose private lives were unsavory must stand from under. Whether these threats have actually convinced any one of the large holders of steel stock that Corey is the right man to continue in the presidency, we are unable to say. The inferences from the argument are, however, painfully obvious. If the directorate of the Steel Corporation retains Corey on the ground that his business skill should not be confounded with his shortcomings as a man, the directorate will thus explicitly announce to the world that it cares only for shrewdness and is indifferent to character. This would not be a reassuring declaration, for people are not yet ready to believe that a Steel Trust by its mere hugeness can defy the forces which inevitably demoralize other enterprises. The revelations of the last six months, if they have taught men anything, have reinforced the eternal truth that in positions of trust, high or low, skill without solidity of character is nothing.

Campbell-Bannerman's preliminary outline of Liberal policy serves to show how a plain, blunt man may meet a clever tactician. Balfour's friends indulged in a good deal of chuckling, at the time of his sudden resignation, over the way in which he had caught the Liberals in a trap. They would be forced to form a Ministry, which could be, in the nature of the case, only a disjointed collection of nobodies, and then the country would see what it had lost in the Balfour Cabinet. But the Liberal Premier did, in fact, succeed in forming a Government which is confessed by all to be much stronger in personnel than Balfour's own. And now Sir Henry comes forward to indicate a policy which will have the united support of the party, and apparently has already the approval of the country. The Home Rule issue, which was infallibly to split the Liberals, appears only in the subordinate pledge to turn over the administration of purely Irish affairs to Irishmen, as soon as the thing can be done. With Parliament what it is, that means only gradual extensions of local government in Ireland. And on the issue of free trade, which Campbell-Bannerman put in the forefront, as it will be in the forefront of the electoral battle; on peace with all the world; on a freely elected Parliament in South Africa, with the cessation of what is practically slave labor by coolies, and on the cutting down of military expenses, the Prime Minister was strong and satisfactory. The Liberal Government has begun auspiciously.

Germans have been quick to see that the Liberal Ministry in England affords the best possible hope of reëstablishing cordial relations between the two nations. It would be unjust to say that the Balfour Government countenanced the attacks of the Jingo English press upon the Kaiser and his people; yet it was plain that, in its desperate clinging to official life, it could easily hint that, owing to complications with this or that country, it would be extremely unwise to "swap horses" just at that particular moment. Fortunately, Campbell-Bannerman is under no such temptation. Moreover, the historic attitude of his party is in favor of justice and fair dealing and friendship with other nations. The presence in the new Cabinet of James Bryce would alone reassure Germany, for it is only a few months since he published an admirable letter of protest against the senseless anti-German campaign, for which the military and naval Jingoes were so largely responsible. Evidently the Germans do not intend to lose a moment in beginning the work of pacification. The recent meeting of the Berlin Chamber of Commerce, which resulted in the friendliest resolutions on the subject of Anglo-German relations, was an echo of a similar gathering in London, with Lord Avebury in the chair. There will certainly be other such demonstrations.

In his recent speech in the Reichstag, the German Chancellor denied that Germany had any thought of sending troops into Russian Poland. That plan was merely another invention of the hostile English press. Germany, he declared, would remain absolutely neutral and let events in Russia take what course they might; for this he gave his word. Accepting it at its full value, the question still remains, not what Germany will do to the Russian revolution, but what that revolution will do to her. One of the very first questions to come before the Prussian Landtag is the voting of more money for the Germanization of Prussian Poland. The Berlin press admits that the great sums thus far spent have achieved very little, and calls for more money to build dikes to keep out the waves of Russian discontent. In Prussia itself the three-class suffrage appears more than ever intolerable—the worst of all electoral systems Bismarck called it—in view of Russian progress and the success of the universal-suffrage agitation in Austria and Hungary. It was proposed last month to have a street demonstration throughout Prussia on a given day, in Russian style, to demand suffrage changes; but the Social-Democrats, Bebel leading, thought it wiser not to run the risk of collision with the authorities and possible bloodshed. But the mere proposal shows how the Russian example is telling.

The blood of the martyrs may be the seed of the Church, but sometimes the seed falls upon stony ground. M. Brunetière, who deprecates the recent anti-clerical legislation in France, takes in the *Revue des Deux Mondes* a pessimistic view of the condition of religion there. Since the enactment of the Ferry laws, Catholic influence in France has been seriously impaired. The dispersion of the congregations and the secularization of the state, will, he thinks, complete the ecclesiastical disaster. Many French Catholics are disposed to look with indifference upon the difficulties which now confront the clergy, and there is a lack of any ecclesiastical organization for concerted action. As a remedy, it is recommended by M. Brunetière that there should be a council of all the French bishops to assume systematic control. He does not desire the formation of a clerical party, like the German "Centre," but only a kind of synod which may do something for the afflicted dioceses and parishes. In other words, he would have a clerical party affiliated with no political party.

The fact that in a Catholic country like France the Centre should be so weak is very significant. But in things religious and ecclesiastical the French conscience has always been affected by the political leaders of the hour. In some countries a policy of suppression has been a failure. No political coercion kept Scotland from being Presbyterian, nor certain Swiss cantons from being Protestant. But France has often passed from one extreme to another, following sometimes the policy of a monarch, sometimes that of a national assembly or parliament, and has gone with a light heart from one creed to another. The reign of Henry IV. was first Protestant, then Catholic. Atheism was triumphant during the Revolution, but Napoleon made peace with the Pope. In seeking a *modus vivendi* for the Church in France, M. Brunetière has his eye upon the United States, where the Catholics, without being allied to any particular party, have had their plenary councils, and unmolested have carried on their work. But, in respect to this, it is idle to compare the two countries. In America traditions are few and flexible. But in France, behind every declaration of policy, however simple it may be on the surface, there is a host of inconvenient memories. An assembly of Gallican bishops used to excite suspicion at the Vatican. In these days it will be feared, rather, at the Elysée.

WHAT THE NAVY NEEDS.

"*Esprit de corps* is a bad thing in a navy. It leads to concealment of defects and abuses which, to be remedied, must be brought to light. What you want is *esprit de patrie*." These words were spoken by a foreign admiral of unusual breadth of professional knowledge, the leading spirit in one of the lesser navies of Europe, in conversation with an American interlocutor. In view of recent revelations of conditions at the Naval Academy, the question may well arise whether *esprit de patrie* in our navy may not be giving way to *esprit de corps*. These conditions are the outgrowth of a spirit which has been developing in the navy ever since the Civil War—a spirit not necessarily bad, but which, unless restrained and guided, must lead to the serious impairment of the usefulness of the naval service. The fact is, that this service is governed by a twofold system of laws—an official one established by Congress and the Navy Department, and an interior unwritten code which, from its very nature, tends when left unimpeded to supplant the official laws. The embryo midshipman, from the first day of his life at the Naval Academy, breathes an atmosphere of submission to this code, which, not embodying any useful restraint, prescribes absolute submission to the arbitrary will of his immediate superiors in rank, on whom his future success as an officer of the service must depend. Regulations how he shall walk on the paths; how he shall turn corners; how he shall not sit on the benches; how he shall hold his hands at table; how he shall or shall not walk with ladies; and under what terms he may engage in a personal combat—are much more than efforts of exuberant youth to make and enforce laws. Like the menial services imposed on a newly admitted member of the Jesuit order, they are the beginning of a course of discipline, the result of which is the complete subordination of the individual to the will of the organization, the reduction of his personality to a mere machine, and the impairment of moral courage. Under the influence of this discipline the navy is becoming more and more a law unto itself. This growth is facilitated by a combination of different circumstances, all tending in the same direction.

First among these is the lack of acquaintance with naval affairs on the part not only of the public at large, but even of that portion of the public specially appointed to supervise the navy. A striking example of this was offered at the hearing before the Committee of Naval Affairs in the last Congress on a bill authorizing the General Board, in the course of which it came out that not even the leading members of the committee were acquainted with the powers and duties of chiefs of bureau in the Navy Department, nor with the historic fact that the proposed law was almost identical in terms with one under which the Navy Department was governed for nearly thirty years of its history, and which had to be abrogated owing to the inefficiency of the system to which it gave rise.

Coupled with this is the absence on the part of our public of that feeling of urgency for naval defence which is necessarily so strong in European countries, especially in England, where the possibility that a hostile fleet may, at short notice, be blockading its coasts or descending upon its ports is ever present to the public mind. Whether rightfully or wrongfully, it is impossible to arouse in the minds of our public any serious apprehension that within a generation a hostile fleet will dare to come within gunshot of our coasts or within range of our torpedo boats—and least of all a battleship, costing more than the entire equipment of any of our great universities, but liable to be sent to the bottom by a torpedo as speedily as an old-fashioned man-of-war.

The outcome of the causes and processes we have described is the best solidified and most perfectly unified non-ecclesiastical organization in the world, actively devoted to ends which are both good and bad. It is only just to the service to place the good foremost; and this is found in the promotion of individual efficiency and professional skill in every operation of the service, whether that of organizing gunfire, disciplining crews, or inventing methods of offence and defence. A policy good on its face and yet not wholly good in results is that of concealing from the public every dark spot and every unpleasant lesson in the history and proceedings of the organization. It would be contrary to human nature to suppose that the feeling that no abuse is in danger of coming to the knowledge of the public—a feeling which grows out of the discipline already mentioned—is not going to have its effect on plain speaking to the head of the Department, and on efforts to remedy the defect.

The ends of the organization which should give rise to most question are the enlargement of its functions in every field pertaining to commerce and navigation, the increase of its influence in the Government, the elimination of the civilian element from every responsible function in connection with the service, and the aggrandizement of the service generally by every method which a charitable public can regard as not illegitimate. These ends can be pursued unavowed and unfelt without taking any measure or adopting any policy that seems on its face inimical to the public interest. One evil associated with them is that the unity of the service is maintained in the face of the growing necessity for its division into corps of specialists, as the army has long been divided. The accidents in connection with gun practice during the last few years strongly emphasize the necessity of an ordnance corps, the members of which shall devote their powers entirely to the intricate scientific problems growing out of the construction and working of modern guns. After every accident to a gun, there is some talk of encouraging officers to make a specialty of the subject; but this does not meet the case. The Ordnance Corps should be a permanent one, made up from the ablest graduates of the Naval Academy in scientific studies, and should hold a position in the service corresponding to that of the engineers in the army. Under the actual system the ablest and best informed student of ordnance in the service, instead of being kept on the duty for which he is so well fitted, is, after a few years of practice, assigned to some post which has nothing to do with the subject for which he is best qualified. The analogous case of the engineers and the policy of merging them in the line has been so much discussed that we shall not enter upon its consideration further than to say that the yielding of the line officer in recent years to the pressure toward abandonment of his rightful position has in it more of evil than of good.

In the light of what we have said, the most urgent needs of the navy of the future may be briefly summarized. First of all, the spirit of personal independence and free expression of opinion and action on the part of its officers should be inculcated. Then we must recognize the obvious fact that the various functions necessary in a modern navy can be performed only by men of varied capacities. At some stage in the course at the Naval Academy—not later, we should say, than the end of the second year—should come a separation of each class into two bodies. One comprises those who, by power of command, love of the sea, and the art of managing men and things generally, are best fitted to assume that position of supreme authority on board a ship of war which is of the first necessity to the commanding officer. The other body will be composed of those who are most proficient in scientific studies, and whose inclination is rather toward the technical applications of mechanics than the command of men. From these will be recruited the highly trained engineers and ordnance officers, of whom at least one should be a necessary part of the personnel of every naval ship. A prerequisite of both these needs is a head of the Navy Department who will be allowed to do his own thinking, recognize his own functions as the representative of the country which owns the navy, reach his own independent judgment on every point, technical or non-technical, after he has heard what is to be said on every side, both from

official and unofficial sources, and give effect to his well-matured conclusions. So long as the head is expected to do no thinking and form no conclusions of his own, so long will the power of the navy continue to grow in a way injurious both to its own efficiency and to the interests of the country to which it belongs.

WHEN POLITICIANS FALL OUT.

The Republicans of New York State are plunged into a factional quarrel quite as bitter as the fight between the Half-Breeds and Stalwarts at the beginning of Garfield's Administration. The contest now, as then, is being waged against the head of the machine. Whether the results will be as disastrous to the party itself, no one can tell. Thus much, however, is apparent: honorable Republicans — aided by many venal camp-followers—are determined to rid the organization of the curse of Odell. Odell, on the other hand, is prepared to die with his boots on. Nor does he lack munitions of war. The narrowness of Herbert Parsons's majority in a test vote at the meeting of the New York County Committee on Thursday night is proof that the Odell forces possess unexpected strength. Odell's captains up the State, Senator George R. Malby and Assemblymen Edwin A. Merritt, are hardly the stuff to lead a forlorn hope. They have not cast in their lot with Odell without reckoning the consequences. Behind them are powerful financial interests intent upon despoiling the Adirondacks. Behind Odell personally are the master of thousands of miles of railway, and like-minded lords of industry. Odell's determination to win at any cost is plain enough; his back is to the wall, and his studied insults to President Roosevelt and Gov. Higgins show that he neither expects nor gives quarter.

It is not merely as a savage challenge, however, that Odell's talk is significant. He offers a contribution to current history, purports to tell us how men are elected to the United States Senate, and how the President himself felt about a recent instance. No one will accept Mr. Odell's statement at its face value; for, while all he says may be true, it is not the whole truth. The attitude of President Roosevelt, granted that it had any influence, was not the only cause of Odell's treachery to Black. The activity of E. H. Harriman in behalf of the serviceable Depew was potent in persuading Odell to disloyalty. In that incident Odell let the world know whose pocketbook commanded his allegiance. But if Odell did not make a clean breast of it, he said enough to cause disquiet in high circles. In wrath as well as in their cups men often blurt out unpleasant facts. We have just seen how great a matter the little fire between Alexander and Hyde of the Equitable kindled. Possibly when politicians, as well as insurance officers, fall out, honest men may learn how the people are hoodwinked.

Odell's assertions in regard to Roosevelt are too serious to pass without comment. The President has let it be understood that he cannot with dignity enter into controversy with a private individual—that is, unless he thinks it worth while. In this case it would seem highly desirable that some friend of the Administration should come forward with a semi-official explanation. The views which Odell attributes to Mr. Roosevelt are plausible; indeed, they do credit to his head and heart. Most citizens of this State will agree that it is a "pity" to have New York represented in the United States Senate by "two almost senile old men." Platt and Depew might feebly dissent, but they are prejudiced. Admirers of the President are justly concerned to learn whether he actually expressed not only this opinion, but also the hope that Odell would support Black; and whether the President changed his mind; and if he changed, why he came to regard Depew as a suitable Senator. These are matters of public importance. Some artist, inspired in the White House, will, we trust, fill in the details of the picture which Odell has so imperfectly sketched.

The reason for wanting all the facts is that more is involved in this case than the political fortune of an ex-Governor of New York, the election of Herbert Parsons as president of the New York County Committee, or of Assemblyman James W. Wadsworth, jr., as Speaker. Thanks to the insurance investigation and C. E. Hughes, we now know to a certainty that many of our political leaders and high officials are nothing but puppets of financial cliques. E. H. Harriman pulls a string, and Odell twitches convulsively; T. F. Ryan pulls and C. F. Murphy responds. R. A. McCurdy, with his $10,000 a year for the campaign fund, had a string on Platt. Many strings were jerked when the settled plans for electing Black to the Senate were upset and Depew was returned. Who pulled them? Who was set in motion? Was the Equitable, with its liberal gift to the National Committee, able to persuade George B. Cortelyou that Depew was not senile? Were other close advisers of the President open to influence? These are the questions that rush upon men's minds when Odell flatly declares the President switched from Black to Depew. President Roosevelt himself may have been but an innocent pawn in the deep game; but are the knights and bishops and rooks who surround him on the chess-board at Washington played by the same skilful hands that move the pieces in New York and Albany? In fine, if we get rid of Odell, do we merely change men but cling to the old method? It would be small relief to throw down one odious boss and put in his stead other bosses, large and small, who may in turn fall under control of those who look upon politics as a "cash proposition."

JOURNALISM IN THE LABORATORY.

If the Eastern colleges have been somewhat slow in establishing schools of journalism, the faculties in the West have perhaps been over-bold in experimenting with newspaper-making. The University of Kansas has established a department of journalism, and at the University of Chicago Prof. George E. Vincent has conducted for three years a course entitled "The History and Organization of the American Press." At both places practical newspaper workers have been engaged to explain the details of actual day-to-day writing, editing, and printing. At Chicago, Professor Vincent's class was set to work last spring to issue a four-page morning newspaper. This laboratory experiment he describes in the *American Journal of Sociology*. It was doubtless an interesting excursion into the practical, but we suspect that it gave the students an exaggerated notion of the importance of the technique of journalism. The theory that the only way to become a newspaper writer is to write for the newspapers, is sound, but we doubt if Professor Vincent's *Daily Times* supplied a real test.

Merely as an experiment, however, the paper produced by the Chicago students is worth notice. It was written and "set up" between nine o'clock in the morning of June 6 and one o'clock in the morning of June 7. The editor of the college daily acted as managing editor, a student employee of the Associated Press as telegraph editor, and two student reporters as news and city editors. Its staff numbered forty, and was divided among the usual departments. From five o'clock in the afternoon until the experiment ended, the plant of the Chicago *Evening Journal* was turned over to the students. The various news associations furnished "copy," and the morning journals allowed the reporters of the *Daily Times* to go out with their own men on assignments. Nothing could be more favorable for a trial, especially as one "rehearsal" was had.

Professor Vincent's verdict upon the *Daily Times*, which was actually sent to press but five minutes late, is that it was "on the whole a success." It did not attempt innovations, merely striving to print the day's news in a clean, attractive form. Its front page, he says, corresponded closely, so far as the choice of news went, with those of the Chicago morning papers. It erred only in giving to the account of the marriage of Emperor William's son a place on the

first page with this equivocal headline, "Oldest Son of Emperor and Duchess Cecilia Married Yesterday." As it turned out, the evening papers of June 6 had "covered" the Prussian wedding so thoroughly that it was bad newspaper judgment to "feature" it on the morning of June 7. A number of "graduate students in political science and economics" wrote the editorials. Such weighty matters were discussed as the future of English diplomacy, the changes in President Roosevelt's Cabinet, democracy in unionism, and "two kinds of reformers." The news that came in on June 6 called for three additional editorials on "Finance and Publicity," "Admiral Enquist and his Cruises," and "A New Theatrical Conscience." If all these matters were touched upon with the pen of authority, Professor Vincent was justified in exulting over the editorial page. In our opinion, the enterprise of the telegraph editor in turning a number of items concerning Government affairs into a special correspondent's Washington letter should not pass unnoticed. As Professor Vincent says in apology, "What are principles and policies in a crisis such as this?"—it was midnight when the letter was manufactured.

The experiment strikes one as a bit of exciting fun for Professor Vincent's class, merely illustrating again what every newspaper man of experience knows—that the technique of journalism is an infinitesimal part of the equipment of a journalist. Headlines and the "make-up" of the page, the mysteries of linotype operation and of the stereotyping room, the "lingo" of the newspaper office—these are things that the alert young reporter in an office will pick up quite as soon as he will need to know them. More to the point was the paper read before the class in journalism at the Kansas State University a few days ago by a former Topeka legislative reporter for a Kansas City newspaper. After an experience of nearly twenty years, this man declared that the essentials of a successful newspaper man are "a receptive mind and willing legs." The ability to write he subordinated, saying that in the school of the editorial blue pencil the plain recital of fact will soon come to be inevitable. Get out among people, he advised the young men ambitious to become great journalists. "Remember that it is the mind that makes the man, and if you possess a newspaper mind all the earth is yours." Insatiable curiosity as to the drift of human affairs marks the "born" journalist; the best training it is possible to give him is the widest possible acquaintance with past and present. His work will be more valuable for a knowledge of the history of Finland or of the Oregon Trail than for a year of laboratory experiments in academic newspaper building.

TWO THEORIES OF MUSEUM POLICY.

The causes of the resignation of Dr. Edward Robinson of the Boston Museum of Fine Arts have been discussed by the press of that city with an unfortunate concern for personalities and a corresponding disregard for principles. Behind all minor considerations lay the fact that the Museum was at least partly committed to innovations which the director did not approve. Among the trustees and officers existed a profound and honest difference of opinion as to the future policy of the Museum; and the prospect of a new building whose very form would condition that policy, made it inexpedient that the difference should be compromised. The controversy affects fundamental principles, and is of interest wherever there are museums of the fine arts.

The contest was and is simply between scholastic and æsthetic ideals of museum management—the former an academic and generally approved policy, the latter a new and revolutionary programme. The conception of a scholastic museum of art history is comparatively a simple one. The aim is to make the collections as complete and representative as possible, to arrange them chronologically, to serve primarily the purpose of the special student, and incidentally to spread a knowledge of art history among the masses. Necessarily, mere beauty of arrangement is subordinated to logical sequence, and many objects are shown in spite of intrinsic mediocrity or unattractiveness because of their instructiveness as measured in terms of the development of art. The British Museum is an excellent type of an institution devoted primarily to research. This idea of museum management corresponds to the scientific tendency of the day, has the whole weight of academic authority in its favor, and may fairly be called the orthodox doctrine. Gradually it has prevailed over the dilettantism that presided over the origins of most public galleries.

Yet many of the more progressive directors and curators have held their orthodoxy uneasily, as a belief not false, to be sure, but narrow. In particular, certain members of the Boston Museum staff have advanced the startling view that the more perfectly an art museum fulfils the art-historical ideal, the more completely it falls short of its function as a public institution. This thesis they have maintained both in the periodical press and in privately printed communications to the trustees. The plea is that the magnitude of modern collections baffles and oppresses the public. A few galleries are frequented, but whole departments are deserted or become mere gangways. Smaller objects, when shown in quantity, are hardly looked at. Thus, collections of high value æsthetically—as Greek vases, small bronzes, medals, figurines, drawings, and the like—are practically wasted; visited, if at all, by the occasional savant or the loafer escaping the rigors of winter. In the system of wholesale exhibition, which unquestionably repels the average man, there is small advantage for the specialist. His needs would be better met if seven-eighths of the exhibits were either stored, or compactly exhibited where a trained curator might readily be consulted. In short, museums as they are to-day are ill-arranged, both for the investigator and the naïve lover of art. Such considerations have led to the sensible theory that different provision should be made for the very different classes using museums: for the student, a department of study and reference conducted along strictest utilitarian lines; for the far larger class, consisting of artists and art-loving people, exhibition halls containing only the choicest remnant of the collections—no more than the public can take in pleasurably and with profit.

The study department of such a museum would consist merely of its present art-historical collections more compactly and conveniently stored or exhibited, in closer proximity to their respective curators, and reserved, in intention at least, for the use of actual students. The needs of the studious class would be more perfectly met by such an arrangement, and the public exhibitions would be relieved of the dead weight of objects of little intrinsic beauty and, for the average visitor, of no worth whatever. Upon the public halls, the management of our imaginary new-style museum would lavish infinite pains. Only a few and the finest objects would be selected as worthy to be shown to the public. These would be exhibited under the most favorable conditions of space, lighting, and accessories. The endeavor would be to make the galleries a delight to the artist and connoisseur, and also an irresistible attraction to the most careless visitor. Cardinal principles would be: only fine and original pieces should be shown; the grouping of exhibits should be primarily determined by æsthetic considerations; incongruous collections should be widely separated, and in general the collections should be isolated. The space to be allotted to the various departments—as sculpture, painting, etc.—should be fixed once for all, and as the museum secured finer objects for its public galleries, space should be made by retiring less desirable exhibits to the study departments. On the other hand there would be abundant space to permit the frequent change of subsidiary exhibits and, in general, to make an apparently arbitrary and rigid distribution of collections actually a very flexible one. One may imagine at Boston, for example, a

gallery containing the finest of the Japanese paintings as a permanent collection, but offering a succession of fine lacquers, bronzes, ivories, metal work, and potteries, according to the ingenuity of the curator in charge and the resources of the study department of the museum. Evidently this kind of curatorship exacts a peculiar tact, but it is, after all, a quality required and found in curators of print departments and librarians. No such officer feels that his duty is done when he has merely sorted his prints and books and put them in casual circulation; beyond that, he endeavors to encourage the use of the best prints and the best books.

Where a museum is by its very foundation and intention devoted to research, or is encumbered by testamentary conditions or by the form of its building, the æsthetic ideal we have briefly outlined is either inapplicable or a mere counsel of perfection. Our own Metropolitan Museum, for instance, cannot for years, if at all, consider such a plan. At Boston, where a new building is in prospect, the plan is perfectly practicable, and we hope will be given a trial. It is no wholly new doctrine that is mooted at Copley Square. For years museum folk, whether of the scientific or artistic stamp, have been moving towards this system of dualism Credit is due, however, to those officers of the Boston Art Museum who, at the cost of considerable misconstruction and even abuse, have given currency in America to the important queries: What is the true purpose of public art museums? Are they a form of university extension in art history? May they not also contribute more directly to the pleasures of life by presenting the most beautiful productions of man's mind and hand in the most harmonious order and surroundings?

THE GENERAL STRIKE AS A POLITICAL WEAPON.

Present signs forecast failure for the second general strike in Russia. It seems to be both aimless and leaderless; the necessary funds are said to be wanting, and the Government is moving with vigor to keep order and to maintain the service on the railroads. But even if this attempt to coerce a Government by suspending work shall fail, the immense success of the previous effort will long trouble the dreams of European statesmen. It was made small account of in this country; but on the Continent it caused a great sensation, and led to sharp debates in Reichstag and Parlement. We have already commented on the speech of the audacious Bebel, telling the German Chancellor that the workingmen of Germany, too, might yet meet the *ultima ratio* of war with their own *ultima ratio* of a general strike. In Paris, the great orator of the Socialists, M. Jaurès, delivered a two-day's discourse in the Chamber along the same lines.

Indeed, it may be plausibly argued that the Russian workingmen got their hint from French Socialism. It has always been one of the sardonic aspects of the Franco-Russian alliance that absolutism was supposed to be happy in the embrace of "égalité et fraternité." A reactionary Czar baring his head at Cronstadt when the "Marseillaise" was played, ought to have been vividly reminded of Louis XVI., and set wondering how long he might have a head to bare. In direct as well as sentimental ways France contributed to the Russian revolution. The money which she freely supplied—and it was to French money that the Czar really did obeisance—went to the creating of new cities and great industries in Russia; which meant the growth of the artisan class, a proletariat increasingly conscious of solidarity, the trades union, and the general strike. But this last as a political weapon was distinctly advocated in France before it was put to its first practical use in Russia. The Socialist professor, M. Hervé, had long before sketched out in print and speech the exact plan which the Russian revolutionaries adopted last October. In the Chamber itself a Deputy, M. Sembat, has expounded the general strike as the next resort of the working classes against oppressive governments; and now comes the eloquent Jaurès to enforce the lesson from Russian experience.

His thesis was artfully named "The Highest Defensive Power of the Nation." The Minister of War demanding more troops and money would not have chosen differently. But, of course, the skilful speaker proceeded to explain that what he wanted was an army "close to the people," as our politicians say—an army "so blended with the people that it shall be the people themselves." Then, he argued, if the proletariat thus made up the greater part of the nation's military strength, it could coöperate with the proletariat of other nations to render powerless those "criminal governments which would let loose the tempest of war," since it would be well understood that the soldiers, if a war they thought unjust should be declared, would precipitate the social revolution supported by a general strike of all their brother-workmen. It was clearly an echo of the same sentiments by Herr Bebel which led Prince Bülow to threaten him with a prosecution for treason if he should utter them where not protected by Parliamentary privilege. All this lends a degree of confirmation to the opinion expressed by a well-informed writer in the December *Fortnightly:*

"The general strike in practical operation is obviously by far the most important phenomenon of politics since the French Revolution. The repercussion of Russian events has already been violently felt in Austria. It will be felt at the next remove in Italy. In Germany, where, as Herr Bebel and his colleagues are aware, a general strike would at present be a mad experiment, certain to be trampled under by the military force of the monarchical majority, the immediate influence of the Russian precedent is less obvious, but the dangerous leaven has entered into the German political system, and will work with an effect which may prove, in the long run, convulsive."

Americans should not felicitate themselves on being entirely exempt from this new peril disturbing European statesmen. We do not confront precisely their problems, it is true. No huge standing army, no vast body of Government railway employees, can with us "paralyze" the Government. But we are seeing a dangerous development of the spirit of monopoly, caste prejudice and tyranny in our trades unions which may at any time lead to an attempt, quite in Russian fashion, to stop industry, cut off food supplies and frighten or starve the country into yielding a part of the power of the Government to labor organizations. The form and aim of the threat differ, but the latent threat exists with us as truly as in Europe. There as here, it rests upon social and economic absurdities. It would put the needs or demands of a class above the needs of the country; and in such a case the country will always find means to assert itself over the class. Even in Russia that truth appears now to be in process of demonstration.

FIRST IMPRESSIONS OF "THE BEAUTIFUL ISLE."

SWATOW, October 31, 1905.

Many scores of years ago the Portuguese fitly named this "L'Ilha Formosa." Equally appropriate as a sub-title would be "Tenebrosa," so shrouded is it in obscurity as far as practical information is concerned. On inquiring in Japan how, whence, and when it might best be reached, the residents admitted that boats do sail from Yokohama, Kobé, and southern China; but they shook their heads and talked darkly of fevers, savage head-hunters, typhoons, lack of quarters, etc.; one man even threatening that only bachelors were to be seen there, as if the normal American woman would take fright at that familiar and usually much-sought-after object. If, nothing daunted by this ignorance or indifference as to practicable ways and means, one continues one's investigations while travelling "all down the thundering coast" of China, one still encounters surprise or disapproval, and one is left to "hit or miss" steamer connection to the island.

For example, we were started for Amoy from Fuchow "just in time" for the weekly mail-boat to Formosa, which had sailed exactly twenty-four hours before our arrival at her port of departure; yet these two Chinese cities are scarcely 170 miles apart, and belong, moreover, to the same province of Fuhkien. As compensation for this contretemps we had three delightful days in Amoy, which has a singular charm of its own, with isles and sea continually interspersed, and with weird rock-forma-

tions suggesting a mightier Stonehenge, while everywhere the banyan tree makes itself a feature. Thus, by possessing our souls in patience, we did get an intermediate vessel for the southwestern coast of the island, and in this small ship crossed what is admittedly one of the three worst channels in the known navigable world. We wallowed in the trough of the sea for twenty-four hours, during which neither eating nor sleeping was possible, and arrived at Anping, which it is irony to call a port. Vessels anchor two miles out from land, in the open roadstead, and in rough weather neither launches nor lighters can cross the tricky bar from the low sandy spit upon which Anping crouches. (During the summer monsoon, ships have been known to await unloading for a fortnight.) Passengers, if not timid, can usually be landed with their luggage, as we were, on small eight by sixteen or eighteen-foot rafts made of thick bamboo lashed together, and curved slightly upward at both ends, and with one jury-mast. In the middle is fastened a tub, with two small seats fore and aft; and when three undersized persons have wedged their feet and knees together therein in a converging design, it would seem impossible to spill them out even by the most complete capsizing. The Japanese, on first occupying the island, scoffed at these frail-looking craft, and introduced the ordinary sampans; but after several boat-loads had been drowned they restored the rafts, for the force of the waves spends itself through the interstices of the bamboo trunks. At Anping, after an almost American customs examination (which we thought due quite as much to curiosity concerning such rare birds as to strict official requirements), we were made welcome by one of the only three foreign traders who still remain there under Japanese rule. For in Formosa, Herbert Spencer's advice to Baron Kaneko has been diligently followed, and the Japanese are diverting most of the island's trade that used to pass through Chinese ports for transshipment, to their own sea-towns, while their coasting craft have successfully underbid all other regular lines; thus making the island more inaccessible, especially in war-time, when their regular subsidized steamers are in requisition by the Government. As another result, Amoy is fast losing ground commercially, and Anping has been deserted by its little coterie of foreigners, for the fine harbor of Kelung is being continually improved, and that is destined by man as well as by nature to be the island's port.

From Anping we travelled by lagoons and along low, sandy beaches with scant vegetation, on small, low trucks, pushed by coolies on a two-foot track. Two passengers can sit upon the one seat, leaving space behind for some small luggage and for the two coolies to jump on whenever, by their efforts, the tiny car gains sufficient headway; they resume their pushing as it slackens. It is surprising how soon they cover the two-mile distance to Tainan, which is a curious blend of former Chinese and latter-day Japanese occupation. Most of the houses still standing show the Celestial form and taste, but here and there one sees a neatness, an openness, a cleanliness, which bespeaks the Japanese occupant. Fortunately for the traveller, there is an excellent inn of the latter nation, as well as a group of kindly missionaries who have nothing but good said of them on all sides; this being a notable exception to the too frequent animus expressed or implied by the commercial folk for the evangelizing band in other parts of the East. In Formosa, both the missionaries and their achievements are praised highly.

We started at the usual matutinal hour of trains in the tropics for our original objective, Taipeh, on the northwest coast. Soon after starting, the fine east-coast mountains come into view, and at changing heights remain with us all day. Sugar-cane and rice are omnipresent on the dead level over which we travel for two hours, while bamboo clumps increase in frequency. At Kagi the mountains are at their highest, and here on rare clear days one can see the monarch of the Empire, Nitakayama (Mt. Morrison), but to us only its fine retainers were visible. The railway is completed save for a missing link of sixteen miles, and here again one mounts the little truck, to be pushed at an amazing rate of speed by two human beasts of burden. At one point the small track makes a double loop to descend suddenly into the broad excoriated bed of one of the tumultuous mountain rivers; and on seeing the numerous and devious channels, each year's differing from every other's, one wonders how the three or four-mile stretch is to be sucessfully bridged by the railway. Up on the green slopes of the mountains one has seen many broad swaths of stone and sand made by these torrents, and the scars are as clean-cut and often as flat and broad as a good road made by human hands. Across the valley one mounts the hills again to board the train, everywhere receiving care and courtesy from the railway officials, one's luggage being handled free of charge. The broad river-bed just left behind seems a line dividing two different regions, for now one travels around and over foot-hills, on which tea-plants stand in stiff review; the sugar-cane is left behind, while the higher mountains are often shut out from view. The paddy-fields are no longer in large, unbroken masses, but are in small, mosaic-like spaces. Soon Mt. Sylvia rises to the northeast in a splendid mass, and we skirt her as the dusk falls and the train plunges down into the darker valleys. She is very beautiful, even without her winter white cap above her flowing robe of richest green, and in this sunset light, with a scarf of mist drawn about her shoulders, she makes a vision to be remembered. But the sunsets in Formosa are particularly fine, and often at this season, when the whole day has been overcast or threatening, or when the hills have been almost shut out by haze or mist, the sinking sun compensates in full by a burst of prismatic splendor.

Taipeh, or Taihoku, or Daitotei, or Twatutia—according to one's taste—is the capital of the island, and here the newest foreign nation in possession is taking down the eight-feet-thick brick walls of the official Chinese city, while leaving one or two of the four gates standing. Within the former enclosure the Governor-General's Palace, the Civil Governor's house, civil-service offices, and army officers' quarters are gaining ground (and space) over the former huddle. (Yet there used also to be snipe-shooting over unimproved land within this very enclosure under chin-chin rule.) Outside are the prison, where hat-weaving and other industries are plied, but which women are not allowed to visit; the camphor station, where the valuable product is packed and shipped as a Government monopoly; the opium refinery (with a secret process), the Japanese not as yet attempting to prohibit but merely to restrict its use among their Chinese subjects. But a heavy penalty is laid upon their own people who try to take up the vice, and it is also made difficult for any Chinese beginner. There is a Bund with foreign hongs looking out across the river and the wide plain, which is beautifully set around with hills. During typhoons the water is sometimes so banked up and hemmed in by two of these that people are obliged to use their back doors, while for ten miles in front there is nothing but an inland sea. The walls around their hongs are often five feet thick at the base, and yet the river ordinarily flows along, as "mild as any sucking dove," twenty feet below. The rest of the town is Chinese, with some few wider streets in the making. All labor is practically in John Chinaman's hands, and he is usually of an excellent type from Fuhkien, while the Hakkas, so despised in their own land, are the cultivators and owners of the central part of the island. We saw tall and sturdy specimens from there northward, and in Taipeh our host's ricksha coolies compared favorably both for speed and build with the average Kurumaya in Japanese ports. Yet about the town the amazing difference in cleanliness, neatness, domestic *bien-être* between the two peoples cries out from the housetops. It is tweedledum once more, and only thus is explicable. Yet the Japanese owe much to their "poor relation," for he lives and thrives in this trying climate. Mr. J. W. Davidson states that, with proper precautions, the climate is no more fatal or dangerous than in many other tropic regions, and he and our host are standing proofs of the assertion. Yet to most foreigners, whether Japanese or European, the excessive moisture and heat prove debilitating. In this connection it is gratifying to note that one Yankee consul should have employed his several years of semi-leisured exile in gathering and arranging material for an excellent book about the country. Mr. Davidson's volume not only is a careful history of Formosa from the earliest days of foreign observation and occupation, but contains, besides, valuable statistics, and is, moreover, illustrated abundantly and interestingly. So authoritative and well-written a book deserves honorable mention, and it is to be hoped that if the State Department has given no official recognition of its worth beyond his promotion, the author may receive a fitting reward from some of the geographical or scientific societies.

From Taipeh there are many pretty trips —by rail and otherwise: to Ke-lung, which is increasingly important commercially on account of its harbor; to Tamsui, which looks out to sea, charmingly placed on its river, near the fine north and south hills, and which boasts a relic of very early days in a well-preserved old Dutch fort built of brick from Europe; to Hakuto, the sulphur valley high up in the hills, where the prod-

uct is worked on the surface, and where are geysers and boiling springs. Afternoon tea at Pangkio is another novel trip, for there one may visit a Chinese multi-millionaire's villa of the finest kind, which yet has that mild touch of decay which is so beautifying. Like other of his rich countrymen, he fled when the Japanese definitively occupied the island, leaving two of his adopted sons, who have since become naturalized Japanese, and much of his property, which had been amassed by piratical forbears. The house is enormous in its spread, with corridors, approaches, and outlying buildings innumerable; but the garden is its chief glory, for here every whim and notion was gratified. What with kiosks, bridges, terraces, walks on roofs and on winding and involuting walls, tiled lattices and balustrades, pools, trees, and potted plants, it is a maze. Color is everywhere in the decoration, and, aside from the round doors and butterfly windows, would be a joy to many American architects who are striving to introduce color into their work. To the tyro it is a delightful revelation of audacious fancifulness.

Of most distinctive interest is the trip "up country," where the savages still hold sway. We went by ricksha for five miles over the fertile plain of the Ke-lung and Sintiam Rivers, where every inch is cultivated, passing the Government's experimental garden, where non-indigenous plants are being tested in the soil and climate. Soon after reaching the foot-hills, the ferriages began, and then we came to Sintiam, which, like all other villages that we saw, is a Chinese settlement with a few Japanese officials and buildings. Here is a quaint mission church which was an attempt to make an orthodox "church edifice" out of Oriental materials. Once more we ferried, and began really to climb in chairs. Everything is lush and varied green, and with the rice in full crop, and the stalks bent down crosswise to dry in rows, still other notes of color are introduced, with the dark soil as foundation. A veritable Joseph's coat seems flung over every little valley. We go on climbing and winding while the swift river twists now in, now out of sight. Beyond Kusshaku, our last village, we passed the electric-light plant of Taipeh, with fine water-power diverted from and under the river a mile or more above, and equipped with turbines. Shortly, beyond, we reached the last settlement of the encroaching foreigner, not far from a tiny Japanese police station. From here everything to the south and east is still the savages, and so fearless and unconquered are they that twelve electric workers were killed at once not long ago, while in February last there was another night inroad. The clever Japanese thereafter devised the scheme of surrounding the tiny group of houses with live electric wire, and thus far have not again been molested by the head-hunters. But the first three months of the year is the period when the young savage's fancy lightly and especially turns to thoughts of love, and to wed he must show a given number of heads. The more, the better choice of brides! So every man on the border always goes armed by Government consent and the strong law of necessity. Warm as was the night, all the windows and shutters of a strong pattern had to be shut tight and bolted, as the aborigines often choose the hour after midnight or that before the dawn to enter any but a close-shut house, and quietly possess themselves of the desired trophies, which eventually ornament their community's central hut.

From our sleeping place we entered their home ground, where the thick forest still protects them and their customs, and makes travel dangerous. Thanks to our host's influence, word was received that everything was quiet, and that we should be allowed to penetrate—which was by so much further than any women have been permitted to do, only two others having travelled as far up as the police station. We had fourteen guns, and our guard was of Chinese "braves" with two Japanese over them. Thus we picked our way in single file up the slopes, sometimes in chairs, sometimes on foot like our guard when the path became too rough or dangerous for even our experienced bearers. Yet their skill was remarkable at sharp turns on the sheer steep, when the front bearer would slip from under his yoke, while the rear bearer swung the chair as on a pivot on the central coolie, who would thus take the entire burden on his shoulders—not, however, without some grunting, which added to one's sense of his effort and one's own precarious position. The growth on every side is riotous; creepers, palms, ferns, tree-ferns are magnificent, the latter reaching up towards the light to a height of 25 or 30 feet. We regretted our botanical ignorance keenly, yet not so much as if the island's flora were classified. This, we are told, has never been done, and the residents claim that much of the island's growth is unique unto itself. But the Japanese have made two collections already for exhibition in their own country, and thus within a few years we shall probably be enlightened by their thorough methods.

Our terminal was at a native hut, where a peaceful young savage and his wife live. Both had singularly fine and good faces, he resembling the portraits of the young Napoleon minus the aquiline nose, but with the same spirited expression, and with the soft, half-tangled hair; a slight bar of dark blue tattooing in a close, even design, starting from the roots in the middle of the forehead, and almost reaching to the eyebrows. He wore the short, sleeveless, cotton tunic, open in front, hand-woven, with broad transverse bands of color toward the bottom. A breech-cloth tied round his waist, with the ends hanging loose, completed his garb, while his gentle, delicate-looking wife's brow was tattooed like his, with two broader bands as well starting at the hair (which was long and fine) on the temples, and running in a straight, narrowing line to the corners of the mouth. This is the mark of the married woman. Her under-garment could be seen only at the throat, where, like her husband, she wore beads (while both wore earrings); for over all was a square of native cloth fastened towards one shoulder, and again at the side, further down, thus confining her arms. They were a remarkably attractive pair, set amidst such a luxuriant nature, and even a sight of their interior did not destroy their charm, pitifully poor and primitive as it was. The other savages whom we passed en route were of strikingly varied types, and this observation was corroborated by Mr. Davidson's illustrations of the different tribes, as well as by an interesting collection of photographs taken by a German scientist, and now in the possession of Mr. Herbert Rose of Taipeh. For in these, groups of kinsfolk in the same village show the coarsest-boned and featured types side by side with finer forms and faces. The children whom we saw either watched us furtively from the jungle, or, if in our direct view, showed terror at our smiling greeting. But the men felt no such timidity, and their free, open scrutiny was startling indeed. Such bold, fearless eyes I have never seen, and go to show how many generations of self-restraint are expressed even in the glance of the civilized human eye. But the most interesting creature whom we saw was a Japanese, who, before the Chinese war and cession of the island, went there as a spy and secret-service agent. He lived among these savages; he had evidently been tortured by them, to judge by one maimed hand; he had married one of them, his wife consequently being ostracized from her people; yet his face, with long, black hair tied behind and hanging loose to the waist, was of the most subtle and inscrutable.

Back from this strange excursion we travelled as the sun set; the mountains lowering, the valleys broadening, the river widening, the whole landscape losing its intensity, as the swift, mysterious tropical dusk surrounded us. At the rest house we dined on luxuries which, thanks to our thoughtful host, had been sent from Taipeh by coolies. Amid such comfort it was difficult to realize that every man in the house would sleep that night with his gun within reach, while the beautiful purple slopes of the mountains sheltered such bloodthirsty children of nature. Many of the tribes are semi-pacified, but not up here in the north, where the Japanese must throw out their outposts warily, as many a bitter lesson has taught them. Our return trip was made in less than a quarter of the time of the out trip, by coming down the picturesque, winding river, shooting some sixteen rapids as far as Sintiam.

We had hoped to visit the east-coast cliffs, which so few have seen and so many have vaunted from Humboldt's time down. But though a Government steamer was put at our host's disposal, we awaited fitting weather in vain. The northeast monsoon was just establishing itself for its long winter blow, and the coast was not safe. Those few folk who have had the good luck to sail by the cliffs by day and in clear weather assured me that they were not all that they have been cracked up to be, for they are ranges of mountains which from a height of 3,000 feet gradually fall into the sea. So we try to believe that our disappointment saved us a greater one. In any case, and without that trip, Formosa is both interesting and beautiful, and, as we sailed out from Tamsui, the sky, the sea, and the blue hills left a last picture on the mind of a series keenly enjoyed and to be ever happily recalled.

EMILY E. F. SKEEL.

MME. ADAM'S REMINISCENCES.

PARIS, December 8, 1905.

Madame Juliette Adam is well known in the literary and political circles of Paris. She was for a long time editor of the *Revue Moderne*, which never attained the popular-

ity of the *Revue des Deux Mondes*, but had its days of importance, especially towards the end of the Second Empire and the first years of the Republic. Madame Adam would not be satisfied if it was only said of her that she has been a remarkably pretty woman and has preserved her charm and beauty to the very border of old age. She has had high ambitions, and has published, besides many articles, several books of unequal value. I confess that I much prefer to her works of imagination those which are recollections of her life. I should rank before all 'Le Roman de mon Enfance et de ma Jeunesse,' which has a grace, an originality, truly delightful. I would recommend also 'Mes Premières Armes Littéraires et Politiques,' and a third volume, the last of this biographical series, 'Mes Sentimens et Nos Idées avant 1870.'

Why does Madame Adam make a sort of distinction between 'Mes Sentimens' and 'Nos Idées'? It is because, while she intends to show herself as she was during the years that preceded the fall of the Empire, she wishes also to show us that she belonged to a group, that she was living in the atmosphere of men who had common hatreds, common instincts, hopes, and aspirations. It is for this reason that her last volume is a sort of historical page, inspiring real interest, all the more because Madame Adam has lost some illusions, has learned much from events, and is able to pass an impartial judgment on many men and things.

The book opens in January, 1865, in a pretty villa where she lived at the time on the Golfe Jouan with her father, her mother, and her daughter. An old doctor Maure and Mérimée have come on New Year's day; the doctor with a letter from M. Thiers, which he reads to the family, and in which the writer speaks of M. de Bismarck with a feeling of uneasiness. A discussion ensues on this subject. I note only the words of Mérimée, who was a Senator, a favorite and a personal friend of the Empress Eugénie.

"Bismarck," he says, "wishes to make a greater Germany in order to be able to give bigger pieces to Prussia. King William knows all about it. He defends his minister against the Chamber, against the Frankfort Bund, against the Prussian nobility, against the people. 'Some day it will be said that I was an exceptional King because I understood Bismarck,' is what he repeats to those who attack the latter. 'To accuse Bismarck of not being German is to have no eyes to see.'"

Madame Adam was a friend of Nefftzer, the founder of the *Temps*, and often praises his foresight, his views on foreign affairs. She quotes him to Mérimée and confirms his views. "Bismarck," says Nefftzer, "wishes to isolate us, to separate us from Italy. . . . He plays a very high game; he lets people accuse him of detesting Germany while he thinks of nothing but making her greater."

Many of the friends of Madame Adam were far from hostile to the Emperor. When they praised him, vaunted the commercial treaty made by him with Cobden, his speeches at the time of the Exposition, she heard the answers of the enemies of the Empire. Her sympathies were more on the side of the opposition, but she heard both sides with impartiality. Mérimée once tells her:

"'In truth, you are a sincere liberal, and you believe that the Challemel-Lacours, the Aragos and their Jacobin descendants, the Brissons, the Ferrys, the Rancs, will give you liberty if they once govern! They are the sons of Robespierre, of Saint-Just, of Marat. If ever they are in power, they will proceed not only like the Terrorists, but as the Church did in its darkest days, for they constitute a Church, these fanatics of anti-clericalism—a smaller Church, but just as fanatical. They believe themselves to be free spirits, and they are only spirits angry with the others. Between the churches of the sectarians and the churches of the clericals, I make no difference. I am a free spirit, a liberal, a sincere anti-clerical, but you . . .

"Victor Cousin was coming towards us; he heard Mérimée's last words:

"'Oh,' said he, 'the red spectre! You have it on the brain.'

"'No,' said Mérimée, 'I was speaking of the black spectre.'

"'How handsome you look,' said Cousin, turning to me. 'You could not be more elegantly dressed.'

"The compliment flattered me, and I would not be behind him. I told Cousin that he was the greatest dressmaker in the world, for he dressed his great ladies [Cousin was at the time writing of Madame de Longueville] with the magic lights of his style."

This bit of conversation is rather characteristic. The grace and charm of Madame Adam reconcile us all through the volume of her recollections to the angry and conflicting passions of those who surrounded her and were her habitual friends. The time which she describes was very interesting; everybody felt that the Imperial system was losing ground, but nobody could foresee how it would end. After the death of Morny, the chief actor in the *Coup d'Etat* of December, the famous journalist Émile de Girardin writes to Madame Adam:

"Morny's influence was the safety-valve. He had become sincerely liked, and wished to make the 2d of December forgotten. He alone was capable of imposing a liberal Cabinet, an Ollivier Cabinet, on the fluidity of Napoleon; he alone dared tell him the truth amid the lies of his entourage. He rectified the zigzags of Ollivier. Morny alone, as an every-day adviser, could use at the same time the Emperor and Ollivier for the good of France. . . . Ollivier, conducted by Morny, might have appeared a statesman. Without him as a safeguard, he will not avoid the accusation of having uselessly betrayed his party."

Madame Adam's recollections give us a vivid idea of the passionate discussions, the revolts, the excommunications, to which the Ollivier Cabinet gave rise. She took as much interest in the literary battles of the time. The dramas of the brothers Goncourt divided her friends; the majority of them were idealists, and protested against the horrors of 'Germinie Lacerteux.'

She had an evening every week, and gives us the list of her more assiduous friends. I will cite among them only Toussenel, the amiable phalansterian (one of the last of a forgotten socialistic religion), author of the 'Esprit des Bêtes'; Challemel-Lacour, Eugène Pelletan, Hippolyte Carnot, Gaston Paris, the Aragos, Nefftzer. I find a curious confession about freemasonry: "One of our friends speaks with enthusiasm of the work of the freemasons, which he proclaims admirable." "The catholicization of France by Clovis," says this friend, "will serve as a point of departure for a contrary action which will extirpate clericalism." This was said in 1870, and it is an open secret that the freemasons are in very large number in the French Chamber of 1905, which has denounced the Concordat. The anti-clerical work of the freemasons has continued without any interruption.

The discussions which took place among these friends on all possible subjects are amusingly told. Madame Adam had an evident leaning toward those who were the least fanatical. "Among most of us," she says, "the traditions of liberalism, respect for the various shades of republican opinion, were dominant; but we felt the reproaches of lukewarmness from some." One of them, who became very important afterwards, insulted the "liberals" with the name of "bourgeois." The Mexican war furnished a fine theme for the adversaries of the Empire. Toussenel one day says: "Bazaine has overstepped the measure of the *vilenies* compatible with the situation. The man is odious; he is devoured with ambition. He pushes Maximillian to acts of violence in order to compromise him; he humiliates him and revolts him by his arrogance. . . . I suspect him of criminal intrigues. I know traits in him which prove that his soul is base." Mérimée speaks thus on the subject: "Morny was convinced, and he had insinuated this conviction in the mind of the Emperor, that the United States were a menace to Europe. He wished to create in Mexico an empire which would become the protector and support of the great and small Latin republics, and to constitute by their alliance a power capable of resisting the United States." Whereupon Toussenel shrugged his shoulders and said: "The United States will sooner or later do as they like in America. Nobody can hinder them. It is useless to defy them and to assume a hostile attitude toward them."

I find a curious conversation between Nefftzer and Madame Adam at the time of Bismarck's visit to Biarritz:

"Bismarck praises Biarritz. Well, he is preparing a war against Austria; it is as clear as day. But he would like to know, in case he should persuade his sovereign, what France would do. But the enigmatic Napoleon III. [who was at Biarritz at that moment] does not know himself. In his eyes the two adversaries are of equal strength, and he believes that it will be time enough to take part for one or the other when the two adversaries are both used up. What he really wants is the return of Venice to Italy. He wants to justify his promise, 'free from the Alps to the Adriatic.' As for the interests of France in the struggle between Prussia and Austria, he does not even think of it. This devilish Bismarck will end by persuading Napoleon III. that the Venetian question, which is his fixed idea, cannot be solved without a victory by Prussia."

The extracts I have made from Madame Adam's volume will give an idea of the nature of a book which cannot in reality be analyzed, as it is a series of quite disconnected impressions and conversations. In an historical sense, however, it possesses interest, as showing what were the hopes, the likes and dislikes, the illusions of the generation which was filling the political and literary scene during the period that preceded the fatal year 1870; and, what adds some charm to the work, is the personality of its author—her impulsiveness, her faculty of seeing at a glance all sides of a question. It is to be hoped that she will soon add another volume to the series, and that we shall have, after 'Avant 1870,' 'Après 1870.'

Correspondence.

THE "KEYNOTE" OF OMAR.

TO THE EDITOR OF THE NATION:

SIR: In your issue of December 7 there is found a criticism of the 'Life of Omar Al-Khayyami,' by J. K. M. Shirazi. In your criticism of Mr. Shirazi's work you say: "Mr. Shirazi well says, however, that 'agnosticism, not faith, is the keynote of his works. But it is agnosticism modified by Mohammedanism and a very human liking for the joys of life.'" Mr. Shirazi has wrongly followed, though, no doubt willingly, the commentaries of the French admirers of the great "astronomer-poet" of Persia; and the French commentators and Mr. Shirazi, with respect be it spoken, have willingly or wofully misconceived the spirit of the chord of Omar Khayyám. So have you, with profound respect be it spoken. The keynote of the works of Omar was faith, and with that profound faith there was contempt for the gross sensualness of Mohammedanism, coupled, nevertheless, as you rightly observe, "with "a very human liking" for them. The French, who delight in proclamations of agnosticism, with contempt for it, are not unlike poor Omar, who despised Mohammedanism, but availed himself of its licenses. But you have forgotten, what an American critic ought not to have forgotten, this exquisite rubáiyát:

"The worldly hope men set their hearts upon
Turns ashes—or it prospers and anon
Like snow upon the desert's dusty face
Lighting a little hour or two—is gone."

Omar Khayyám was a great mathematician; a logician knowing the value of words and the weight to be given to a formulated proposition. He appreciated what he felt and what he had committed to writing, and he was content to be judged thereby. When he declared that it was the earthly hope that turned to ashes after a little hour or two, he must be taken as distinctly implying his belief in an eternal hope that would neither turn to ashes nor, "Like snow upon the desert's dusty face, lighting a little hour or two" and then vanish; and no poet, preceding or coming after Omar, could more forcibly or more exquisitely have proclaimed his faith in a future life of pain or of happiness. At least neither poet nor believer ever did.

The rubáiyát I have quoted is but one of many that could be quoted in defence of the faith of the great astronomer-poet, but all that could be quoted are but complemental to his confession of faith, while running through his works is a vein of contempt—not often concealed—for Mohammedanism.—Very respectfully,

LAURIE J. BLAKELY.

COVINGTON, KY., December 19, 1905.

[Our judgment on the agnosticism of Omar Khayyám was based neither on the book of Mr. Shirazi nor on the adaptation of FitzGerald, but on a certain amount of study of the original Persian and some reading of translations of which Mr. Blakely seems unaware. This is neither the time nor the place to enter into a discussion of the relation of FitzGerald to the Persian text, but we suggest that our correspondent read the real versions of a poet whom we both admire, Whinfield's 'Quatrains of Omar Khayyám' (London, 1893), and, perhaps still better, Payne's 'Quatrains of Omar Kheyyám of Nishapour' (London, 1898). Omar is not an easy poet, and his quatrains represent, as do the thoughts of all men who endeavor to unravel the tangle of life, diverse and conflicting views according to mood and experience. Our faith in FitzGerald as an interpreter is as scanty as in the French commentators whom Mr. Blakely rightly condemns. Poet and man must be judged by the sum total of their words, not by isolated expressions, beautiful though they may be. Uninfluenced, then, by Shirazi, Nicholas, or FitzGerald, we still feel that, all things considered, the keynote of Omar is agnosticism; that it is summed up in the eleventh ode of the first book of Horace with its refrain of *Carpe diem.* —ED. NATION.]

Notes.

We are glad to learn that a life of the great anatomist, Jeffries Wyman, is in preparation. It has been undertaken by Prof. Burt G. Wilder of Cornell.

'The Queen's Christmas Carol' is a unique book published in London on behalf of the Queen's Fund for the Unemployed. It consists of poems, stories, sketches, drawings, and pieces of music by leading British authors, artists, and composers, who have united to make in this way their response to the appeal. Among the nearly fifty contributors are the Poet Laureate, Sir L. Alma-Tadema, Holman Hunt, Sir F. Burnand, Austin Dobson, Mrs. W. K. Clifford, Marie Corelli, and Sarah Grand. The publication has been undertaken by Sir Alfred Harmsworth, and the cost (half a crown) places it within the reach of nearly all classes. The fund now amounts to more than half a million dollars.

The Division of Manuscripts in the Library of Congress has just put forth a 'List of the Benjamin Franklin Papers' in that storehouse, prepared by John C. Fitzpatrick. What is here made available is the "second series," so called, of the Stevens collection acquired by the Government; or, the non-diplomatic MSS. yielded by the State Department to the Library of Congress. To that extent it is doing well what had been done badly in the list of the entire collection printed by the Senate of the 47th Congress. As a calendar it is purposely not minutely analytical. On the other hand it embodies papers found in the Library outside the collection, and indicates previous use of any in print, particularly by Mr. John Bigelow. There is an index of persons and topics, and this serves well enough through its chronological arrangement answering to that of the calendar; but when dates are doubtful and so bracketed [?], we think the *page* of the List should have been affixed for reference. It is true that these are bunched together at the end, like Lord Timothy Dexter's punctuation marks, and fill less than ten pages; still, some time must needs be lost—*e. g.*, let one try to run down the rubric "English honesty."

We are glad to record the appearance of another volume, 'King Lear,' in the pocket-edition of the First Folio, so scrupulously edited by Misses Porter and Clarke (Crowell). Glossary, variorum readings, literary illustrations, and selected criticisms make each volume a sufficient library for leisurely study and enjoyment of the play.

Mr. A. R. Waller's authentic editions in the "Cambridge English Classics" (Macmillan) are continued with Matthew Prior's 'Poems on Several Occasions,' following the text of the poet's last collected issue, the folio of 1718, with variants from the edition of 1709 and other sources. This labor has been performed with Mr. Waller's well-known conscientiousness and particularity. Another volume, of prose and verse, will succeed the present.

The sister university press (H. Frowde) adds two more volumes to its "Oxford Edition" of standard authors, viz., 'Cowper' and 'Browning.' These are plain, frankly popular imprints, pleasingly if soberly bound, and each with its portrait and introduction. The 'Cowper' is fuller than any previous collection, as it has gathered in some scattered poems of comparatively recent discovery. It omits the Homer and "Adamo." Much critical labor has been bestowed on text and dates by Mr. H. S. Milford, who gives a useful chronological table of Cowper's life and time. The 'Browning' is in the main a reprint of the three-volume edition of 1863, but it includes "Pauline" from the edition of 1833, and two pieces never reprinted by their author in any collected edition of his poems.

The excellent series of "Tudor Translations" (London: David Nutt) has been enriched by two volumes of Machiavelli's works. The first contains 'The Art of War,' translated by Peter Whitehorne and first published in 1560; and 'The Prince,' in the version of Edward Dacres, which dates from 1640. The second volume is filled with 'The Florentine History,' Englished by Thomas Bedingfield in 1595. We do not need to call attention to these seasoned works, which may be read with pleasure by any one who has a taste for the rich, sententious English prose of three centuries ago. But more than passing mention should be made of the introduction, written by Mr. Henry Cust, M. P. In an essay of some forty pages he gives an admirable sketch of Machiavelli's life and a critical analysis of his writings. Remembering how easily men otherwise sane suffer delirium in dealing with 'The Prince' and its author, we can hardly praise Mr. Cust's sobriety too highly. He gives a true glimpse of Machiavelli's greatness, as historian, as political philosopher, as prophet of reforms which came to pass many generations later, as dramatist and as writer. He says with exact truth, "The slender volume of 'The Prince' has probably produced wider discussion, more bitter controversy, more varied interpretation, and a deeper influence than any book save Holy Writ." He might have added that Machiavelli is the only modern whose style can stand beside that of Tacitus, firm as adamant in texture, yet swift and varied in flow. We commend Mr. Cust's appreciation to everyone who desires to be introduced without prejudice to the

Florentine whose genius has been the storm centre of prejudice for nearly four hundred years.

Miss Bearne's 'A Queen of Napoleon's Court' (Dutton & Co.) is a life of Désirée Bernadotte, and will doubtless achieve a satisfactory circulation. It will please a class of readers unacquainted with Bourrienne and Madame Lenormand, indifferent as to criticism and judgment, unskilled in matters of grammar and rhetoric, intent merely on promiscuous anecdote and cheap sentiment. The critic is left disarmed by the obvious candor of Miss Bearne's mind and her complete, if unrealized, helplessness before the problem she has attempted. However, she is sure to reach a wide public, and may find consolation in that fact.

T. Henry Dewey's 'Legislation against Speculation and Gambling in the Forms of Trade' (Baker, Voorhis & Co.) is a small volume of seventy pages collecting the English and American statutes dealing with this subject—not only those prohibiting, but those permitting, speculative transactions. These last, *e. g.*, the English and New York statutes authorizing "short" sales, are quite as important as the former, which, except to a very limited extent, are inoperative. The author thinks that the compilation demonstrates "the confusion, inconsistency, and absurdity of the attitude of the public manifested in them," but is also of opinion that there is now "a decided tendency toward non-interference with the natural courses of trade." The true test would seem to be "whether the right of the buyer to require, and of the seller to make, actual delivery existed." On one side of this is legitimate speculation; on the other, "bucket-shopping." The usual mistake of statute-makers is to adopt the false test of the *intention* to make actual delivery. The true test is difficult enough to apply; the false one makes confusion of the whole subject.

The principal article in the *National Geographic Magazine* for December is by United States Consul-General Fee of Bombay, on the Parsees of India. He gives a brief account of their religious belief and history, and then describes their manner of life, especially the ceremonies attending marriages and funerals. Contrasting their condition as a peaceful, wealthy, and influential community, the most intelligent and liberal of all the Indian peoples, with the low estate of their brethren in Persia, he regards them as a remarkable instance of the beneficence of British rule. There are a number of interesting illustrations, including a portrait of the cotton manufacturer, Mr. Tata, who has just given a million dollars for the founding of an Indian University of Research. Among the other contents is the wise and temperate Chicago address on China and the United States by the Chinese minister, Sir Chentung Liang-Cheng, in which the exclusion question is discussed, and Chairman Shonts's account of what has been accomplished towards building the Panama Canal. Referring to the workmen employed, he says: "It is estimated we do not get more than 25 per cent. of the efficiency of labor in the United States." To this inefficient labor it is compulsory to apply the eight-hour law, thereby adding many millions unnecessarily to the total expenditure. Mr. Shonts maintains that the application of this law, of the contract-labor law, of the Chinese Exclusion act, or of any other law passed or to be passed by Congress for the benefit of labor at home, to labor on the Isthmus is a serious error.

The nearly two-century-old "charity of the Rev. Thomas Bray and his associates, for founding clerical libraries and supporting negro schools," is about to have a new lease of life. The charity commissioners of England have drafted a scheme providing for the appointment of a body of managing associates and for a division of the funds. The educational endowment, consisting of about $30,000, together with $290 yearly rent of property in Market Street, Philadelphia, will be applied towards the support of schools for negroes in Nova Scotia and the Bahamas. The remainder of the funds, amounting to about $23,000, will be used for the establishment, maintenance, or augmentation of theological libraries in Great Britain or elsewhere for the use of clergymen of the Church of England and students who are candidates for holy orders. The first of the thirty-nine American libraries established through the efforts of Doctor Bray was founded in Annapolis, Md.

The next International Medical Congress will again be held on the Iberian peninsula, namely, in Lisbon, from the 19th to the 26th of April, 1906. The preparations are in the hands of a committee headed by Prof. Miguel Bombarda, who is reported to be diligently at work removing the troubles that brought the last meeting in Madrid into an almost chaotic state. One of these difficulties was to find proper hotel quarters. As the hotels in Lisbon are inferior to those in Madrid, arrangements have been made for a first-class ocean steamer to bring most of the participants to Lisbon and to furnish quarters and meals to its passengers during the period of the convention.

—Mr. A. F. Bandelier has turned aside from his Peruvian studies to look over the ground covered during his early labors for the Archæological Institute of America, in preparing the notes for a new translation of the 'Naufragios' of Alvar Nuñez Cabeza de Vaca, issued in the "Trail-Makers" series (A. S. Barnes & Co.). This translation, by Mrs. Bandelier, has been made with much care, and will replace that of Buckingham Smith, published half a century ago, as the authoritative English version of the earliest detailed account of the Gulf States. Mr. Bandelier contributes an introduction and various notes which should be useful to readers unfamiliar with the subject, by giving them a general idea of the course followed by the Spanish wanderers. It is unfortunate that they were not at the same time made of use to students, by including in them some of the results of the earnest study to which the Cabeza de Vaca narrative has been subjected during the last decade. Every student of Southwestern history recognizes Mr. Bandelier as the master whose remarkable 'Historical Introduction,' published in 1881, made possible all that has since been done in this field. That book, dealing with subjects upon which no satisfactory studies had previously been made, was a most unusual achievement, based upon thorough research and marked by sound scholarship. No work of this sort can ever say the last word, however; and accurate as were Mr. Bandelier's knowledge, insight, and judgment, the larger part of his conclusions in matters of detail have been affected by more intimate acquaintance with localities and more thoughtful comparisons of sources of information. It is unlikely that any one will ever know just how Cabeza de Vaca got from the fresh waters of the Mississippi to the Gulf of California, because his own notions as to the route he had travelled must have been confused and indefinite. Those who know the regions through which he may have passed, have nevertheless been able to limit his possible course in some respects, and to raise strong presumptions in others; and it would have been desirable to have had these considerable modifications in the route as previously laid down taken account of in the notes to so excellent a translation.

—It was a happy thought on the part of Friedrich Kerst to bring together, in little volumes of 100 or more pages each, the gist of what eminent composers have said about themselves and others, and upon diverse topics, chiefly artistic. Schuster & Loeffler of Berlin have already brought out four volumes in this "Brevier-Bibliothek," dealing with Beethoven, Mozart, Schumann, and Schubert, and these are having a large sale. Excellent English versions of the first two have just been printed by B. W. Huebsch. The translator is H. E. Krehbiel, who has added a number of explanatory notes. The plan of these books is to print, so far as possible, the composer's exact words, followed, in each case, by a note in smaller type explaining the circumstances under which they were spoken or written. Moreover, the aphorisms and other sayings are classified. In the case of Beethoven we have sections Concerning Art, Love of Nature, Concerning Texts, On Composing, On Performing Music, On his own works, On Art and Artists, Beethoven as Critic, On Education, On his own Disposition and Character. The Sufferer, Worldly Wisdom. Mozart's utterances are similarly grouped. Comparing the contents of the two books, one gets the impression that, quite apart from their musical gifts, Mozart's mind is much the more keen and stimulating. Beethoven's letters are concerned chiefly with business and other prosaic details, while Mozart's have a distinct literary value. Nevertheless, the 'Beethoven' is well worth perusing. Champions of the latest aberrations in programme music, for example, might read with profit the Bonn master's maxim: "Carried too far, all delineation in instrumental music loses in efficiency." And how prophetically this sums up the tendencies of the Richard Strauss school: "When the gentlemen can think of nothing new, and can go no further, they quickly call in a diminished seventh chord to help them out of the predicament." From the Mozart volume one is tempted to quote freely, it is so full of good things; but a few samples must suffice. "Sewing-machine" pianists of the time, listen! Mozart saw through you long ago: "It is much easier to play rapidly than slowly; you can drop a few notes in passages without any one noticing it. But is it beautiful?" "Our taste in Germany is for long things; as a matter of fact, short and good is better." Had that utterance of Mozart's been heed-

ed by the German masters from Beethoven to Wagner, what a blessing it would have been! It is worthy of note that while Mozart seems opposed to the modern idea that "in opera, willy-nilly, poetry must be the obedient daughter of music," he nevertheless anticipates Wagner in saying that "Verses are the most indispensable things in music, but rhymes, for the sake of rhymes, the most injurious. . . . It were best if a good composer, who understands the stage, and is himself able to suggest something, and a clever poet could be united in one, like a phœnix."

—A recent addition to the Pilgrimage Series published by A. & C. Black, is Mr. H. Snowden Ward's 'The Canterbury Pilgrimages' (Philadelphia: Lippincott). From the point of view of the historian, Mr. Ward has written a very minute and interesting description of the life and death of Thomas à Becket and of the cult of St. Thomas. This cult, which spread throughout England and the Continent, was at first opposed by the churchmen of Canterbury, who were jealous of Thomas, and had viewed complacently enough the fall of the unruly archbishop. But the remains of the martyr displayed, from the first, wonderful healing powers, and the monks were compelled to recognize their virtue and welcome the countless pilgrims who thronged to Canterbury. The cult persisted from the middle of the twelfth century till the reforming zeal of Henry VIII. in the sixteenth swept away all the material traces of the saint and his worship in England. Mr. Ward's chapters on the pilgrimages, with their résumé of Chaucer's 'Tales,' are an excellent introduction to Chaucer. He follows the route of those famous pilgrims from the Tabard Inn in Southwark, down the Old Kent Road to Dartford, Rochester, Sittingbourne, Ospringe, till from Harbledown Hill they saw before them the great golden angel that, in those days, stood on the central spire of Canterbury Cathedral. The 'Tales' were told, as every reader knows, partly during the halts in that leisurely ride of fifty-six miles from London to Canterbury, partly on the ride itself. The Pilgrims' way was then unfenced, often only a path, and the modern road by no means represents, except at intervals, the rough track that Chaucer travelled. Mr. Ward's book has an interest quite apart from the pilgrims; the antiquities of the whole route he describes at length and illustrates with charming photographs, the work of Mrs. Ward, who started from either London or Winchester. There are good maps of the localities. Kent has other pilgrims, nowadays, not less numerous but more destructive than those of old. These are the "hoppers," who annually descend on the county to pick hops and spread in every hop-growing district the manners of the London slums. Mr. Ward gives an interesting list of words and phrases derived from the old cult of St. Thomas. "Pilgrim way" is still used to denote a path little used and hard to travel. A "canterbury" is, according to him, still used in America, if no longer in England, in the sense of a 'traveller's tale"; the pace known to all as a canter is a contraction of the Canterbury gallop; and "cant" is whimsically said to have been originally applied to "the hypocritical dissertations of those who had been to the martyr's shrine."

—'A Yankee in Pigmy Land,' by William Edgar Geil (Dodd, Mead & Co.), is the bright narrative of a journey across equatorial Africa, by rail to Uganda, caravan through the great forest, and steamboat to the mouth of the Congo. The transit seems to have been singularly free from exciting episodes with either men or animals, as there were no recorded encounters with wild beasts, and the natives were everywhere friendly. The principal point of interest in Uganda was the missionary work, which is described with enthusiasm and in some detail—a chapter being devoted to a biographical sketch of Bishop Tucker. The pigmies naturally receive the most attention, and a pleasant picture is drawn of them and their simple life. A characteristic, distinguishing them from the other natives, is their love of fun, which is so marked that Mr. Geil styles the forest in which they live the Land of Laughter. They show no signs of degeneracy, but are finely formed, possess great bodily strength, and are capable of great development. Mr. Geil is very guarded in his references to the government of the Congo State, but it is evident that he saw much that sustained the accusations of inefficiency and misgovernment. He says that, as a rule, the officials are underpaid, and their use of intoxicants is almost universal. Considering the climate and their surroundings, the statement is not surprising that insanity prevails among them, and "that ninety per cent. of the officers of this government and officials whom I met were sick. Extend military power to an irritable, nervous man, let there be no dissenting white men with strong humane sentiments as observers, and the kind of treatment which will be meted out to the black can easily be prophesied" (p. 326). It should be added that our author records no flagrant cases of cruelty of which he was eye-witness, but that he tells of much that has been done to civilize and develop the people in the neighborhood of some of the stations. The humor in which he indulges in his narrative is carried too far and becomes wearisome. At times it seriously obscures his meaning, and suggests an occasional doubt as to whether the whole book is not a joke. The illustrations consist of a hundred reproductions of photographs, mostly of the author and the natives and their surroundings.

—The last two volumes (18 and 19) issued by the Selden Society are a collection of Borough Customs, edited by Miss Mary Bateson, and a second volume of the Year-Books of Edward II., edited by Professor Maitland. Miss Bateson's material has been laboriously gathered from the printed and manuscript custumals, or codes of customs of the English boroughs; but no effort has been made to exhaust this field of research. Still less has she attempted the gigantic task of hunting for customs through the manuscript court-rolls of the English boroughs, a vast territory which still awaits the historical explorer. The arrangement of the extracts according to subject-matter and not according to provenance is the best for purposes of comparative study. The editing, as we might expect, is admirable, and the value of the collection to the student of English legal origins, is manifest. Professor Maitland's present volume lacks the extraordinary charm which his historical and critical introduction imparted to the first instalment of these Year-Books; but its contents are in interest fully equal to those of its predecessors. Here, again, we find astonishing touches of real life handed down by the unknown reporter. Thus, the great Bereford, C. J.., in answer to counsel pointing out the hardship which his client will suffer, retorts (p. 140): "If he accepted a recognizance in a silly form, who is to blame for his folly?" And in another case, which will surely be important to future historians of English equity, the same judge asks: "With what equity, look you! can you demand this penalty?" (p. 59.) As before, each unofficial report is, whenever possible, elucidated by the addition of the dry official record from the original court-roll; in this respect, the Selden Society's volumes are superior to those of the Rolls series edited by Mr. Pike. It is to be hoped that the gap in that series between the last year of Edward I. and the eleventh of Edward III. will continue to be filled in this masterly manner.

—The Proceedings of the Association of German Librarians at its meeting in the city of Posen last June are printed in the September-October number of the *Zentralblatt für Bibliothekswesen*. The list of papers opened with an account of the new Kaiser-Wilhelm-Bibliothek by its Director, Dr. Rudolf Focke. Although only two and a half years old, it has already become one of the more important libraries of the Empire, standing as a bulwark for German culture on a more or less foreign (Polish) soil. Dr. Hans Paalzow followed with a discussion of the recent plans for uniform cataloguing of German libraries. He gave first a survey of the history of the Prussian Union Catalogue, emphasizing the important services of the Government authorities in furtherance of this undertaking, especially those of the Ministerialdirektor, Dr. K. Althoff. In this connection the speaker brought out the interesting fact that it was on Althoff's initiative that Heinrich von Treitschke in 1884 published his now famous article in the *Preussische Jahrbücher*. Both Dr. Paalzow and Dr. Erman, who also contributed a paper on this subject, agreed that the form of entries might with advantage be made simpler, and that much would be gained in point of time if the scope of the catalogue could be temporarily restricted by omitting for the present such classes of books as school books, funeral sermons, and other more ephemeral literature, as well as incunabula and Orientalia. The question of a general classified catalogue of the German (not alone Prussian) libraries was also discussed and its importance strongly brought out, especially by Dr. Paalzow. Dr. Erman's paper was in part a reply to critics, pointing out that the care of the classed catalogue is by no means the only scientific work of the librarian; that the assistance given to seekers for information and the systematic inquiry into and filling of the gaps in a library's collections really are of as much importance scientifically.

—Problems connected with classification are treated also in the *Festschrift* which Dr. Focke and his collaborators prepared and presented to the librarians who met in Posen. Dr. Focke's address on "Classification: the General Theory," delivered at the

St. Louis Conference last year, is here printed in the original, somewhat expanded and accompanied by a compact "Instructions for the Classed Catalogue," which must be regarded as an important contribution to a subject whose literature is not over rich. Dr. B. Wenzel describes the bibliographical division of the catalogue of the Kaiser-Wilhelm-Bibliothek, and Dr. F. G. Schultheiss discusses the division "Kulturgeschichte" as a development of the Halle classification. The most generally interesting of the other papers is a survey of Polish Bibliography by the bookseller, J. Jolowicz.

MADAME D'ARBLAY'S DIARY AND LETTERS.

The Diary and Letters of Madame d'Arblay. 1788-1840. With Preface and Notes by Austin Dobson. Vols. IV.-VI. The Macmillan Co. 1905.

The fourth volume of Fanny Burney's 'Diary' covers the last three years of her life at Court, years of ill health and fatigue, in which her chief consolation seems to have been the composition of her first tragedy, which was no sooner completed than she began another, finding that these pictures of fictitious woe "soothed the melancholy of imagination." It is curious that, in her list of grievances against her profession as maid of honor, her bitterest complaint is not that her duties left her no time to write. In fact, one of the most striking features of the whole six volumes is the absence of literary interest. One never has the impression that this is the revelation of the private life of a woman of letters. Fanny was no Mrs. Jellaby. Family ties, home life, and the refinements of the best society filled her foreground, and it is obvious that she preferred a volume of travels or religious meditations by her friends among the bishops to any other reading. In 1790, after an estrangement of six years, she met again Mrs. Piozzi, "my formerly most dearly loved Mrs. Thrale," who had been cut by most of her fashionable acquaintances on her second marriage. From this time they were on polite but not cordial terms until, in Fanny Burney's last years, the sorrows of both women drew them together. The derangement, this time only temporary, of George III. is the main topic of volume four. It was Macaulay who pronounced this part of the narrative more important to the historian than any equal portion of Pepys or Evelyn. Not long after the King's recovery, Fanny Burney was allowed to retire to her father's house, awarded by the kindness of Queen Charlotte an annuity of £100.

The first chapters of the fifth volume, 1792-1802, describe Fanny's gradual restoration to health, and, as part of her Southern Tour with her friend Mrs. Ord, her visit to Bath, which was clouded by memories of her lost friend Dr. Johnson, who had been one of Mrs. Thrale's gay party when a season was spent at Bath soon after the publication of 'Evelina.' In 1792 it is interesting to find Fanny's brother, Charles Burney, starting a subscription for "his very learned friend, Mr. Porson," who had been suddenly left, as she says, "at large without a guinea" (p. 108). The application for subscriptions was made "only to the rich and learned," and Porson received from this source about ten thousand dollars. Those who are interested to prove that reading, for the Greeks, usually meant reading aloud, and quote St. Augustine's practice and the incident in the eighth chapter of the Acts as evidence of the custom, should note that on page 96 of this volume Burke is described as reading Boileau "aloud, though to himself."

In 1792 the absorbing theme was French politics, and Fanny Burney was constantly encountering at the houses of her friends some of the most distinguished among the *émigrés*. Her sister, Mrs. Phillips, lived at Mickleham, near Box Hill, in Surrey. Not far off was Juniper Hall, a house which still stands, though much altered, close to the Dorking Road. It was there that a small colony of French exiles settled themselves in 1792, among them the Duc de Montmorency, the Comte de Narbonne-Lara, who had been Minister of War to Louis XVI., the Comte de Girardin, son of Rousseau's friend, and other no less distinguished persons, men and women, who waited in terrible suspense for news of the King's fate, on which hung their own fortunes and chances of return to France. Among them was the Comte d'Arblay, La Fayette's adjutant, who had been on guard at the Tuileries on the night when Louis escaped to Varennes in 1791, and had on this account been denounced by the revolutionaries and obliged to flee. Fanny Burney soon became a favorite visitor at Juniper Hall, where she met among others Talleyrand and Madame de Staël, who, though an ambassadress, was unsafe in Paris because she had received and protected in her house certain destined victims of the 10th of August and the 2d of September. Talleyrand, Fanny at first disliked, though later she calls him "one of the most charming of this exquisite set." But, from the first, Alexander d'Arblay won all hearts, and received the nickname, "the best of men." When he quitted France with La Fayette, he had only a little ready money in his pocket, and all his property was soon seized and confiscated by the Convention. While in England, he shared the purse of De Narbonne. His financial prospects were not therefore encouraging, and when, in the spring of 1793, Fanny Burney announced to her father her projected marriage to the penniless exile, she met with the strongest opposition. Dr. Burney was at last persuaded to give a reluctant consent, but was not present when, in July, 1793, the marriage took place in Mickleham church, and for two years he remained "cold and averse."

The last two-thirds of this volume describes the life of the D'Arblays in a Surrey cottage on an income of £125, derived from the rather uncertain source of Fanny's pension and a meagre allowance from Dr. Burney. In 1796 Fanny published her third novel, 'Camilla,' which, though it was considered far inferior to 'Evelina' and 'Cecilia,' was much more lucrative, since with the proceeds, nearly £3,000, she built "Camilla Cottage," at West Humble, in Surrey. In this house, now much enlarged and called "Camilla Lacey," the property of Mr. Harris, the D'Arblays lived till 1802, when they left Surrey forever. Their son, Alexander D'Arblay, was born in 1794 at the "Hermitage," Great Bookham. Artemus Ward was supposed to be the first to call a baby an episode, but we find Madame d'Arblay, in an interview with George III., who with the Queen gave her a hundred guineas for their copies of 'Camilla,' answering his question, "And about what time did you give to it?" "All my time, Sir; from the period I planned publishing it, I devoted myself to it wholly. I had no episode but a little baby" (p. 274). In 1800 Fanny's comedy called "Love and Fashion" was being rehearsed at Covent Garden. She had been promised £400 for the MS., when Dr. Burney took fright, on grounds that remain a mystery, and persuaded his daughter to withdraw the play. This she did with much chagrin but unquestioning obedience.

The sixth and last volume is the most interesting, at least historically. The D'Arblays removed to Paris in 1802. They had nothing to hope from Napoleon, since D'Arblay could hold no military post in consequence of his firm refusal to take up arms at any time in the future against England. They were warmly welcomed, however, by the best Royalist society, and were admitted to the First Consul's receptions, of which Madame d'Arblay gives amusing accounts. For some years they lived in retirement at Passy, in great poverty, since D'Arblay had recovered only a very small and encumbered portion of his estate, with a content that would have been complete had they not been cut off from intercourse with England by the war that broke out in 1803. It was ten years before, in 1812, Fanny again saw her English friends, running the greatest risks of arrest and imprisonment by secretly crossing to England in defiance of the edict of the Emperor Napoleon. There, in 1814, she published 'The Wanderer,' her last novel. All her readers were disappointed to find that she had not used her intimate knowledge of French affairs and society to introduce a fresh *milieu*. Her contract secured her at least £1,500. But her interest in the book's reception was shadowed by the death of Dr. Burney in 1814. When peace was declared in that year, she was presented in London to Louis XVIII., who held a small court in Grillon's Hotel, Albemarle Street, before his triumphant accession. The description of her presentation and of the whole function is one of the liveliest in the 'Diary,' for no one surpasses Fanny Burney in reciting the humors and embarrassments of social ceremonies. With the restoration of the Bourbons, D'Arblay obtained his due rank as Maréchal, and was appointed one of the bodyguard of the King.

Early in 1815 Madame d'Arblay, now again in Paris, relates her interview with the Duchesse d'Angoulême, the surviving daughter of Louis XVI. and Marie Antoinette. This unfortunate lady's resentment at her misfortunes and sensitiveness to any fancied slight made her manner in general far from gracious, and she was unpopular in Paris, where, as she said to Rambuteau, she "expected to be misunderstood." But to the authoress of 'The Wanderer,' which she was reading in the French translation, she was all condescension. Shortly after this interview came the return of Bonaparte from Elba and the Hundred Days. D'Arblay was sent on a recruiting mission for the hopeless cause of the King, who had fled to the Netherlands, while Madame d'Arblay retired to Brussels. There she stayed for some time after the battle of Waterloo. Of all the terrors, the suspense, the disappoint-

ments, and at last the successes of Wellington which ended in the restoration of the Bourbons, she was a spectator. Over 120 pages are devoted to the events of those three months. In the Brussels that she describes on the eve of Waterloo there are few echoes of "revelry." Her son was safe at college in England, but her husband was in a position of the greatest danger, and with no chance whatever of gaining distinction from his mission. Her tale is filled with all the varied horrors of war. Brussels was a place of terror for all but the phlegmatic inhabitants; and after the defeat of Bonaparte, though the suspense of the French fugitives was relieved, they had to witness the horrors of a city transformed into a hospital and threatened with pestilence, the streets crowded with grim processions of the dead and dying. Gen. d'Arblay's health was shattered by the fatigues and anxieties of the campaign, and he retired on half-pay to England, where he died at Bath in 1818. His widow's happiness was now centred in her son Alexander, who in 1817 was Tenth Wrangler and received a fellowship at Christ's College, Cambridge. This eccentric son, who had given his parents the greatest anxiety from his hatred of all that was conventional, and an indolence that threatened his prospects, did not long live to console his mother. He was ordained a clergyman of the Church of England, and died in 1837, leaving Madame d'Arblay now completely alone in the world. Her last years are sad reading. Blindness and increasing infirmity weighed on her spirits, and she found that even her taste for books had deserted her. She died in 1840 at the age of eighty-seven, and was buried near her husband and son at Bath.

In the last volume is included a postscript by Mr. Austin Dobson, who takes the opportunity of the instalment plan under which the work has been issued to add certain afterthoughts and explanations. He has been criticised for not including in this reissue the 'Early Diary' of 1768-78. This had not been printed in the original edition of 1842, but it was published in great part, and with lavish notes, as late as 1889. It was therefore thought inexpedient to add it to the 'Diary' in its present form. Mr. Dobson has evidently been reproached for the brevity of his footnotes, which, for our part, we have found amply sufficient, and even, for a careful reader, often superfluous; and he has had to defend his omission of a new introduction. This was rather hard on one who had obviously said all that can be said in his volume in the "English Men of Letters" series on a writer who has told her own tale so admirably, and whose talents and defects are obvious to the least gifted critic. Mr. Dobson's edition takes the place of that of the early forties, which is become rare. The 'Diary' is now reduced to six instead of seven volumes, and though they are considerably larger than the original issue, the excellent type and light paper more than atone for the extra size. The illustrations are reproduced to far greater advantage, and many photographs have been added. Each volume has a separate index, while the last closes with an excellent general index of the whole work, which is certainly Fanny Burney's most important and most permanent contribution to literature.

LANDOR'S FLORENCE.

The Florence of Landor. By Lilian Whiting. With photographic illustrations. Boston: Little Brown & Co. 1905.

Without giving any but the barest details of the poet's life, Miss Whiting brings vividly before us the brilliant circle of choice intellects, so attached to Landor and to Florence, who ministered to his later years. Walter Savage Landor was the pioneer of that Anglo-American colony which has left its mark on Florence. He came there in 1821, after having already spent six years in Italy, first in Como, then in Milan and Pisa. We must take exception to Miss Whiting's assertion: "The Florence of Landor differed little from the Florence of to-day." Florence in 1821 was the most picturesque of cities, standing amid its walls; the ruthless hand of so-called progress has swept away innumerable landmarks of her past. Peruzzi, when she was destined to be the capital of Italy, had the walls torn down and reduced her to the dead level of a modern city. The picturesque quality of any place must needs give way to hygienic measures and modern requirements, and the changes have never ceased. The influx of thirty thousand tourists every spring creates needs which are satisfied only by the ever-growing rows of hotels, shops, and tramways. Italy of to-day delights in emulating every phase of civilization; her greatest ambition is to be up to date with latest inventions; hence it would be preposterous to suppose it is the Florence of Landor's time we now see before us. The visitor who has been absent for even two years cannot but note the increasing number of factories which spread a veil of smoke over the city when he looks down on her from the hillside of Fiesole; also, the innumerable little white villas dotted too frequently among her olive orchards over her surrounding hills tell of her popularity, but do not add to her charm. Her chief monuments, fortunately, remain for the most part intact, but their setting is entirely different. Many still remember that wonderful avenue of cypress trees leading up to San Miniato cut down to make the drive of the Viale dei Colli; and just now the Torre al Gallo, Galileo's tower, has been demolished and is being restored to serve as a *pension* for foreigners.

It was another Florence that Landor knew, and which offered new life and inspiration to him. *Destiny* had led his steps thither, and the "Great Companions," to quote Whitman, "are on the road—they are the swift and majestic men—they are the greatest women"; "Destiny," who, as George Eliot says, "stands by sarcastic, with our *dramatis personæ* folded in her hand." Of these were Leigh Hunt, Lord and Lady Blessington, Francis and Julius Hare, Mr. Kirkup, the Trollopes, the Brownings, Isa Blagden, the poetess, Lady Bulwer, Mrs. Anna Jameson, Byron, Emerson, Mrs. Somerville, the Hawthornes, John Kenyon, Nathaniel Parker Willis, Mrs. Stowe, Margaret Fuller (Marchesa d'Ossoli), Frances Power Cobbe, Theodore Parker, Pasquale Villari and his wife (then Linda White), Kate Field, Sir Frederic Leighton, the Thackerays, Frederic Tennyson, Hiram Powers, Owen Meredith (Lord Lytton), George Eliot, and Mr. Lewes, Mr. and Mrs. Wetmore Story, Swinburne, and many others, who "came and went—or came and stayed," during the forty years of Landor's life there.

He first lodged in the Palazzo Medici; it was not until 1829 that he became the owner of the Gherardesca villa through the extreme generosity of his friend and ardent admirer, Mr. Ablett. We quote a letter of Landor's to his sister narrating how this piece of good fortunte befell him:

"Two years ago, in the beginning of the spring, I took a walk towards Fiesole with a gentleman settled in North Wales, Mr. Ablett. I showed him a small cottage with about twelve acres of land, which I was about to take. He admired the situation, but preferred another house very near it, with a much greater quantity of ground annexed. I endeavored to persuade him to become my neighbor. He said little at the time, beyond the pleasure he should have in seeing me so pleasantly situated; but he made inquiries about the price of the larger house, and heard it was not to be let, but that it might be bought for about two thousand pounds. He first desired me to buy it for him; then to keep it for myself; then to repay him the money whenever I was rich enough—and if I never was, to leave it for my heirs to settle. In fact, he refuses even a farthing of interest. All this was done by a man with whom I had not been more than a few months acquainted. It is true, his fortune is very large; but if others equal him in fortune, no human being ever equalled him in generosity."

It was this same Mr. Ablett who commissioned the sculptor Gibson to make a bust of Landor, of which he gave him a copy.

This was the happiest time of the poet's life. He thoroughly enjoyed improving and planting his garden and getting the villa into order. "My country now is Italy," he writes to his sister, "where I have a residence for life, and can literally sit under my own vine and fig tree. I have some thousands of the one and some scores of the other, with myrtles, pomegranates, lemons, and mimosas in great variety." He planted two hundred cypresses, which, round the lawn, are a very distinctive feature of the garden to this day. The villa was splendidly situated; every window framed a beautiful view.

"Every spot around was an illustrious memory," writes Forster. "To the left the house of Machiavelli; still farther in that direction, nestling mostly amid the blue hills, the white village of Settignano, where Michael Angelo was born, on the banks of the neighboring Mugnone the house of Dante and in the background Galileo's villa of Arcetri and the palaces and cathedrals of Florence. In the thick of this noble landscape, forming part of the village of San Domenico di Fiesole, stood the villa which had now become Landor's. The Valley of the Ladies was in his grounds; the Arico and the Mensola ran through them; above was the ivy-clad convent of the Doccia overhung with cypress; and from his iron entrance gate might be seen Valdarno and Vallombrosa."

The Careggi villa, in which Lorenzo the Magnificent lived and died, was close at hand, and added not a little to the fascination of the locality for Landor. Here Leigh Hunt found him "living among his paintings and hospitalities in a style of unostentatious elegance," "a man of vehement nature and great delicacy of imagination, like a stormy mountain pine that should produce lilies."

It was during this early happy time at

the villa that Landor wrote his 'Imaginary Conversations,' that great landmark in English literature. They fill six large volumes, dramatizing the thoughts of the most important individualities of all times. In Lowell's opinion, no poet excepting Shakspere has furnished so many delicate aphorisms of human nature as Landor. He had the habit of composing these wonderful conversations as he walked alone on the Fiesolan hillsides, declaiming them as he went, Landor himself, with reference to this habit of composing in the open air, which Emerson had also, says: "It is my practice and ever has been to walk quite alone. In my walks I collect my arguments, arrange my sentences, and utter them aloud. Eloquence with me can do little else in the city than put on her bracelets, tighten her sandals, and show herself to the people. Her health and vigor and beauty, if she has any, are the fruits of the open fields."

It was in 1833 that Emerson went up to dine with Landor, who had invited the American sage through the medium of the sculptor, Horatio Greenough. Want of space prevents our quoting Emerson's record of those visits to Landor, which he published in 'English Traits' twenty-three years later, and which called from Landor a rather petulant retort. Emerson, Mr. Forster tells us, for more than twenty years, made the 'Imaginary Conversations' his constant companion, and

"publicly expressed to Landor his gratitude for having given him a resource that had never failed him in solitude. He had but to turn to its rich and ample pages to find always free and sustained thought, a keen and precise understanding, an industrious observation in every department of life, an experience to which it might seem that nothing had occurred in vain, honor for every just and generous sentiment, and a scourge like that of the Furies for every oppressor, whether public or private."

Emerson pronounced Landor to be one of the foremost of that small class who make good in the nineteenth century the claims of pure literature.

A chapter full of suggestive reconstruction is devoted to that episode of Landor's early life, his deep feeling for Rose Aylmer, who died in India at the age of twenty. His love for her and the remembrance of her seem to have tinged his whole life; later on, his affection for her niece and namesake, Rose Paynter, afterwards Lady Graves Sawle, continued to inspire much of his poetry. But by far the most interesting portion of the book is that which treats of the later period of Landor's life, when through family dissensions and feuds he was driven from his villa to find a refuge in Florence, among his devoted friends. The Brownings, and the Storys seem to have been quite a Providence to him, the latter keeping him for months in their villa, always occupying themselves with his affairs, and affording the most delightful social intercourse. It is the extracts from letters, and the narrative of Landor's friends, their excursions with him and talks and all the cross correspondence so ably put together, that give the charm to the book.

The photographic illustrations of the Villa Landor in the book are of recent date, showing the additional story to the tower which its late owner, Prof. Willard Fiske, had built on, altering the harmonious proportion of its structure. Miss Whiting very justly devotes some pages to Professor Fiske's unbounded hospitality to all visitors to Landor's villa, his scholarship, and his munificent gifts to Cornell University in his collection of scarcely rivalled libraries of Dante, of Petrarch, and of Icelandic literature.

English Hours. By Henry James. Houghton, Mifflin & Co. 1905.

In this ornamental volume Mr. James has collected sixteen essays on English scenes and occupations. They have all appeared before, eight in 'Portraits of Places' (1883), four in 'Transatlantic Sketches' (1875), four in collections that had been made from the magazines. That entitled "London" appeared first in the *Century* for 1888, made a reëntry in 'Essays in London,' and has been illustrated afresh by Mr. Pennell for the present work in a style very different from the earlier pictures that he drew for it in the *Century*. The excuse for this new collection is that it possesses a unity of interest denied to the other editions of Mr. James's essays of travel, which ranged from Venice to Niagara. He gives us here under one cover all that he has had to say about England from time to time, from the early seventies, in fact, down to the opening of this century—from the days when he drank in the impressions that beset the passionate pilgrim in England, who so much better than its inhabitants, as he says in "Chester," can appreciate "the 'points' of this admirable country," to the hours when, as an old inhabitant himself, he set out to recite the obliterated history of Winchelsea and Rye.

"And even with this, after all, the imagination can play. The wide, ambiguous flat that stretches eastward from Winchilsea hill, and on the monotone of whose bosom, seen at sunset from a friendly eminence that stands nearer, Rye takes the form of a huge floating boat, its water-line sharp and its bulk defined from stem to stern—this dim expanse is the great Romney Marsh, no longer a marsh to-day, but, at the end of long years, drained and ordered, a wide pastoral of grazing, with new Romney town, a Port no more—not the least of the shrunken Five—mellowed to mere russet at the far end, and other obscure charms, revealed best to the slow cyclist, scattered over its breast; little old 'bits' that are not to be described, yet are known with a small thrill when seen; little lonely farms, red and gray; little mouse-colored churches; little villages that seem made only for long shadows and summer afternoons."

So run the long, undulating sentences of this later essay, with its style so markedly other, so far more complex, than belongs to his work of the seventies.

Throughout all the sketches the keynote of Mr. James's admiring interest is precisely this air of history, either obliterated, or still (for even this sight, in Europe, stirs his imagination) in the making; and he can thrill at the sight of the "imperial machinery" of Woolwich as his eye rests on "the interminable façade" of the Royal Artillery Barracks. As he passed in his hansom (in one of his "exploits" or "adventures" as he regularly calls any sort of undertaking, from a cab drive to opening a book) the statue of Queen Anne facing Ludgate Hill, "all history appeared to live again, and the continuity of things to vibrate through my mind." What impresses his imagination as he gazes down the Row is the thought that every important member of English society has "bobbed in the saddle between Apsley House and Queen's Gate. You may call the roll if you care to, and the air will be thick with dumb voices and dead names, like that of some Roman amphitheatre." And what makes the Row more interesting than, say, the Coliseum, is the continuity of it all. For Mr. James, as for many, the charm of London lies mainly in the fact that there, of all places in the world, "the balance of many tastes is struck," a thing "only possible in a very high civilization." For him the ponderous and solemn London club is a sympathetic haunt. "What is the solemnity but a tribute to your nerves, and the stillness but a refined proof of the intensity of life?" Such a settler finds even the London fog friendly.

Mr. James has made no alterations of importance in republishing these sketches. In that entitled "Old Suffolk," however, he has in one passage modified the original with some risk of confusing his readers. On page 323 he alludes to FitzGerald as already dead, though at the close of the essay he retains the date 1879. FitzGerald died in 1883.

Mr. Pennell's illustrations, which number over three hundred, are, we need hardly say, of great merit and interest. They are decidedly impressionistic, and would evidently be more effective in color. Occasionally their descriptive titles are highly necessary, as in the case of that facing page 180, which looks precisely like the bathing beach of Atlantic City in August, and is about as horsey; it is called "The Start for the Derby."

Mohammed and the Rise of Islam. By D. S. Margoliouth. (Heroes of the Nations Series.) G. P. Putnam's Sons. 1905. Pp. xxviii., 482. Maps and illustrations.

This is a very disappointing book. The author is a competent Arabist; he is thoroughly acquainted with the sources which have much increased quite recently; he appreciates the value of the modern psychological studies in religious enthusiasm; he is in sympathy with the historical criticism of early Islam by Goldziher, Nödeke, Wellhausen, etc. He starts, also, from a—so far—excellent position. "I regard," he says, "Mohammed as a great man who solved a political problem of appalling difficulty—the construction of a state and an empire out of the Arab tribes." But, for all this and much more that is excellent, the English life of Mohammed is still to write, if it has not already been written in Muir's larger work. The root of the trouble seems to be that Professor Margoliouth regards Mohammed as, in the first instance, a shrewd politician, and only in a secondary fashion as interested in religion. Religion was a means for him towards an end. The salvation of his own soul had not lain hard upon him, though his mediumistic performances—for so his revelations are reckoned—may have been suggested to him by some earlier experiences. These, also, were tainted by the imposture before which all mediums sooner or later fall. His environment, too, is depicted in the same way, and as of much the same nature. The genuinely religious influence and effect upon his followers is minimized, the scheming, grasping aspects are emphasized.

Now all this, it can hardly be doubted, takes hold of the matter at the wrong end.

Mohammed was wonderfully successful as a founder, but it was as founder of a religion which animated and united, not of a state and an empire. That came later. He left behind him no organization; he left only a community permeated with certain ideas. The central point is there. He was a man of ideas, not of affairs. His own conversion and all which led to it had been very real to him, and sent him out to others. His trance experiences and the revelations therein were also, in the earlier years, very real to him; he took his mission seriously. So one very weak point in Professor Margoliouth's picture is that he does not emphasize, nor apparently understand, Mohammed's relation to the Arabian *kahins*, his likeness to whom he once or twice touches, but only touches. Mohammed, in truth, was a *kahin* with a difference, just as the greater Hebrew prophets —Samuel, Hosea, Isaiah, etc., were comrades of the mobs of prophet-dervishes, but with a difference. When he began to tamper with his trances and use them for his purposes, is a problem, but there can be no question about his seriousness to begin with, and it is a large question but he may have deceived himself to the end. The annals of Oriental mysticism are full of examples of perfectly certain self-deception which to us are perfectly unintelligible.

Nor does Professor Margoliouth seem to have allowed weight enough to Mohammed's moral earnestness. The earlier sections of the Qur'an are a veritable gospel of the poor. Kindness to the unfortunates is reiterated, and if the insight is not as deep as that of Amos, it is equally strong. The burden of the misery of life lay heavily upon him, even as it is pictured in so many of the old Arabian poems, and the fear of Allah is invoked as a quickening force. All this receives scant notice. Nor is justice done to his literary ability. That he was a great artist in rhymed prose—though, most curiously, absolutely incapable in verse—is nowhere brought out. Yet it was a source of his power, and, by neglecting it, Professor Margoliouth leaves his influence really unexplained. As always in Arabia, it took an orator to do his work. Arabia, in his time, was passing through the last of a great poetical period. He was one of its products, but, incapable of the technique of verse and urged by his nature into religion, he turned his literary power into prophetic utterances after the fashion of the soothsaying ecstatics whom he had known.

Hence the disappointment with this book. Professor Margoliouth seems to have been led astray in the first instance by his formula about solving a political problem. In the second instance, he has been affected by comparative studies in enthusiasm and imposture, along with the psychology of conversion and the like. I. W. Riley's psychological study of the founder of Mormonism, and Podmore on modern spiritualism, have influenced him, and Starbuck's book on conversion. All that is excellent in its way, and such investigations give us the clue to much on the dark side of the mind. But sympathy is needed also, such as Prof. William James, in his 'Varieties of Religious Experience,' feels and shows for his queerest cases. Of such sympathy there is no whit here. This book might have been written by an eighteenth-century deist or a middle nineteenth-century secularist, for whom all religion and religious emotion were fraud. Such may not be Professor Margoliouth's attitude; it certainly seems to be his basis in treating Mohammed. Yet, whatever may be said of Mohammed's later life, with its undoubted conscious or unconscious fraud, in his earlier there was much spiritual enthusiasm, much moral earnestness, and the command of language which marks a poet, all three of which made him a force, gathered for him a community, enabled him to rule it to his death, and to leave it as the germ of the Muslim state. But to interpret that calls for sympathy, such sympathy as Professor Lane-Poole gave to the companion figure of Saladin in this series; not for cynicism, however incisive, keen and cool-headed. Professor Margoliouth is too clever to see primitive facts.

The "Samson Agonistes" of Milton.—The "Prometheus Unbound" of Shelley.—The 'Sartor Resartus' of Carlyle. By J. Macmillan Brown. New Zealand and London: Whitcombe & Tombs. 1905.

Before—let us hope, some time before—taking his prescribed seat on a ruined arch of London Bridge, the legendary New Zealander has resolved to make a detailed study of the literature of the decaying Empire. The New Zealander at present in question, Mr. Macmillan Brown, was for twenty-one years a professor in Canterbury College, Christchurch—the greater part of the time lecturer on English literature. It may surprise readers who think of the colony under the Southern Cross chiefly as a laboratory of State Socialism to learn that, in that most English of colonial towns, this enthusiastic professor gathered together and year after year kept intact the largest English literature class in the world outside of Edinburgh and Glasgow. Some two hundred students eagerly followed courses of which much was heard in the other colonies of the group. We have for some time been, and are now still better, in a position to appraise the lectures that attracted such audiences and (through the scattering of their auditors all over Australia) have exerted an influence on the entire continent.

In the volume too modestly entitled 'Manual of English Literature,' published in 1894, Professor Brown, perhaps for the first time, applied to English literature the concept of evolution which Brunetière and Maurice Souriau were at that very time applying to French literature, and which Pypine was afterwards to apply to Russian literature, Adolf Bartels to German literature, Leslie Stephen to the literature of the eighteenth century, and Wilbur Cross to the English novel. Three volumes on "Julius Cæsar," "Antony and Cleopatra," and 'Esmond' gave the outside reader specimens of a new type of instruction in English literature. Studies of all kinds in Shakspere we are familiar with: within the last twelve months Professor Bradley of Oxford has published lectures that recall Professor Brown's; but "the treatment of a contemporary work of fiction by the same methods was then new in literary teaching (for it is ten years since the lectures were locally published and many more since they were first delivered). The three volumes named above have since been additionally published.

We naturally turn first to the freshest and most attractive—the volume on 'Sartor Resartus.' Taking down the book one day from his sister's bookcase at Dumfries, Carlyle said of it that "it could have been written only at Craigenputtock." He little dreamt that "the rugged Orson of a book" he wrote there "with his heart's blood" would one day be anatomized in an island in the Western Pacific where, at that time, hardly a single white man was to be found. Professor Brown takes the right point of view in studying it. Carlyle once said to Froude that the only part of the book that was autobiographical was that relating to his conversion; and when one of his secretaries announced that he was composing a biography of the master on the basis of 'Sartor,' Carlyle's wrath exploded in a letter to the *Athenæum* too Swiftian to be printed. Mr. Martin was right, nevertheless. Our professor conclusively shows that 'Sartor' is autobiographical all through. From Froude's biography, from Carlyle's letters and 'Reminiscences,' and from the recollections and observations of others, he sheds illuminating light on the whole. Carlyle's parentage and early surroundings, his personal history and habits, his mental and moral characteristics, his literary style, his philosophy and his religion, are there mirrored as they are not even in the essays of his most sympathetic critics—Thoreau and Burroughs.

The author applies the same autobiographical method to the two poems. "Samson Agonistes" is Milton Agonistes. The poet had at one time projected a "Samson Hybristes"—Samson the Insulter—and such a poem would have reflected the Milton of the prose pamphlets. But now the struggle was over and the situation changed. The poet, too, has been literally "blinded by his enemies." It is Milton who appears at the gate of the prison in Gaza—his retired house in Bunhill Fields, where he is guided by some helping hand to find sun or shade, and dreads mobbing or assassination if he ventures forth. His career had been Samson's; both had been champions of a high cause and had passed "twenty years of obscurity and struggle" in aid of the fickle crowd that had now forsaken them. Samson's "wounds immedicable" were Milton's very own. Yet both have still a great part to play. The physical strength of the one and the spiritual power of the other have come back to them. Samson's last feat and Milton's epic have a strange resemblance. Point by point our colonial professor elaborates the parallelism; and who will say that it is fanciful? But Professor Brown is genetic as well. Samson in the poem is a compound of the primitive wild man, delineated in the original folk-tale, and the wise, far-seeing patriot and judge who has been idealized from a single verse tacked on to that tale. The composite portrait is still that of Milton.

If the study of "Samson" is the most delightful of the three volumes, the lectures on the "Prometheus" are the most important. Alone of Shelley's fast aging works, that greatest of lyrical dramas still enchains those who knew it almost by heart in their youth. It is here examined in all its aspects—its Greek progenitor, its art, its central figure, its minor personages, its

lovely female characters, the play as revealing the nature of the poet and as reflecting the age. Professor Brown opens up new depths in the character of the demigod. His nature has undergone a purification: it has been redeemed by suffering; it has been reconciled with nature. Throughout the play the ethical interest is supreme. As he analyzes it, the author's thought takes a wider sweep. With a glowing imaginative eloquence that seems to belong rather to the pulpit than to the professor's chair, he describes Shelley's dream of the future, its inevitable disappointment, and the nobler vision that arises out of that. We can understand that such lectures should have moulded the lives as well as trained the minds of their auditors.

Daughters of the Puritans: A Group of Brief Biographies. By Seth Curtis Beach. Boston: American Unitarian Society. 1905.

It makes a great difference in a volume of memoirs whether it shows marks of really original thought and investigation or is due more conspicuously to a pair of scissors. This book belongs distinctly to the latter class; and though the material is good and well put together, it lacks freshness. The author has used pretty faithfully all printed matter relating to his subject; but there is absolutely no evidence of that added exploration of manuscript material which is now demanded by the thoughtful reader. In dealing, for instance, with Margaret Fuller Ossoli, there is nothing to show that the writer has explored any one of the five bulky volumes of her letters and memoranda in possession of the Fuller family in Cambridge; or (what is especially to be regretted) that mass of manuscript, now the property of the Boston Public Library, which is practically the sole source of direct knowledge about her Italian life. Its materials were not merely used, but liberally misused, by her first biographer, the Rev. William Henry Channing. His printed extracts prove absolutely misleading at some points, the manuscript having been freely rewritten in many places by him, and creating sometimes a distinctly false impression. Hence the importance of examining the manuscripts.

In this dearth of direct and original information, Mr. Beach, of course, draws freely and not always accurately on books; thus, in speaking of Madame Ossoli's girlhood (p. 174), he says: "Cambridge was then, according to Col. Higginson, a vast, sparsely settled village," whereas the latter only calls it a "quiet academic suburb," and says that it was divided between three detached villages. Mr. Beach's phraseology is elsewhere quite misapplied, as where he speaks of "the unpolished manners of Mr. Garrison's paper, the *Liberator*." Of such a phrase, one can say as Wendell Phillips said when the colored orator, Charles Remond, called George Washington a villain: "Charles, the epithet is infelicitous."

Here and there, also, we find minor inaccuracies, as where it is twice stated (pp. 274, 278) that in 1860 Miss Alcott "was becoming a regular contributor" to the *Atlantic Monthly*, the fact being merely that she published two stories there in that year and two others three years later. A mere reference to the 'Atlantic Index' would have prevented this.

Among the authors selected as the subjects of this volume, Miss Sedgwick and Mrs. Ware are now pretty well forgotten, though they doubtless deserve something better. There is also a strange waning in Mrs. Child's literary reputation; and even as to Mrs. Stowe and Miss Alcott this is in some degree true. It is to be remembered that Miss Dix was not, properly speaking, an author, but that her career was, as Mr. Beach well says, "a romance of philanthropy." He is, perhaps, wise in giving so little space to her service in the civil war as superintendent of women nurses, inasmuch as her career in that respect yielded some disappointment. She had always been accustomed to acting alone, and moreover, she construed her limits in selecting nurses very closely, from the point of view of a maiden lady of sixty-two, and this amid the loud complaint of wounded soldiers. One of her circulars, for instance, ran thus: "No woman under thirty years need apply to serve in Government hospitals. All nurses are required to be very plain-looking women. Their dresses must be brown or black, with no bows, no curls, or jewelry, and no hoopskirts." Such minute restrictions awakened some natural irreverence among the wounded soldiers.

The young widow of Major-General Lander, for instance, was practically excluded because of her having been an actress, until after establishing herself at Beaufort, South Carolina, where she waited at her own expense until the battle of Olustee gave her sudden and unexpected freedom for most beneficent action. There is a story told of her that, at the very outset of her enterprise, when the wounded men were being brought in from the transport steamers and placed on hastily collected beds in a deserted building which had been assigned to her for hospital uses, she heard a shy knock at the front door, and, on flinging it dramatically open, saw before her a small Episcopal clergyman who had been sent to Beaufort for his health. He had just arrived, and had been directed to her "for a comfortable lodging," as he said. He timidly introduced himself as the Rev. Mr. So and So from New York. "Delighted to see you, sir," cried the impassioned lady with her most impetuous glance. "Can you dress wounds?" she added in a tone which would have suited Lady Macbeth. "Spiritual wounds, madam," he replied, still more shyly. "No time for that, sir, now," she responded; "that hospital is awaiting its patients. Good morning, sir!" And he hastily withdrew from the scene, leaving Lady Macbeth to her duty. It would doubtless have been a scene quite melodramatic in the eyes of Miss Dix, but perhaps the wounded soldiers forgave it.

We cannot well complain of Mr. Beach for not inserting the anecdote, especially if he never heard it; but we could at least wish that he had persuaded his publishers to allow an index at the end of his work.

The Wives of Henry VIII. By Martin Hume. McClure, Phillips & Co. 1905.

Queen Mary of Modena. By Martin Haile. London: Dent. 1905.

Having written 'The Courtships of Queen Elizabeth' and 'The Love Affairs of Mary Queen of Scots,' Mr. Martin Hume once more associates politics with marriage in 'The Wives of Henry the Eighth.' How little of genuine romance there was in the life of this sovereign, we need hardly say; but Mr. Hume as an historian is always looking beyond the foreground of courtship and fixing his gaze upon the international diplomacy or the clash of parties which lies beyond. For Miss Strickland, of yore, the Queens of England had a deep personal interest, each one of them being dignified by the biographer and made to stand in the centre of the picture. It is characteristic of Mr. Hume's method that he should style the consorts of Henry VIII. his wives rather than his queens. With the six unfortunate women whose names are familiar to every schoolboy he has little to do, the title notwithstanding. The real motive of the book is furnished by his interpretation of the character of Henry VIII., for illustration of whose traits he turns to the quarter of matrimony. For ourselves we find the most striking feature of the book in the contrast it offers to Mr. Pollard's conception of the King. Mr. Pollard, it will be remembered, considers that Henry VIII. grew in intellectual power and political astuteness while his character steadily degenerated. Mr. Hume quite agrees to the fact of degeneration, but has a far lower opinion of Henry's mental gifts. Stating the case in terms of matrimonial policy, the issue assumes some such form as this: Was the King a clear-headed, though immoral despot, who knew what he wanted in the way of a wife, and was bound at whatever cost to place by his side the woman of his choice? Or, was he less strong-willed than is ordinarily supposed to have been the case, and, indeed, "a weak, vain, boastful man, the plaything of his passions, which were artfully made use of by rival parties to forward religious and political ends in the struggle of giants that ended in the Reformation"? Froude, of course, looked upon Henry as the masterful and intelligent ruler who carried council and nation along in his train; and Mr. Pollard, however severely he may tax Henry for cruelty and lust, adheres to the conception of strength. Mr. Hume, on the other hand, sees vanity, love of pomp, and instability of purpose where his predecessors have beheld a spectacle of powerful will and ruthless determination. Viewed thus, the critical part of the reign becomes a contest between Thomas Cromwell, on the one hand, and Norfolk, supported by Gardiner, on the other. In theology, as every one ought to know by this time, Henry was a Catholic; and after Cromwell had been made a scapegoat for the North-German alliance, he readily came to terms with Norfolk's party, which, albeit Catholic, was willing to accept the Act of Supremacy. Mr. Hume has, we think, belittled Henry's intellectual capacity, but the evidence which he marshals to illustrate his theory of light-headedness is neither meagre nor trivial. "The obstinate self-assertion and violence that impressed most observers as strength, hid behind them a spirit that forever needed direction and support from a stronger soul." In these words will be found the gist of a clever though inconclusive volume.

If Mr. Hume treats somewhat cavalierly the queens of Henry VIII. in giving their husband the leading rôle in his volume, the same neglect of his heroine cannot be laid to the charge of Mr. Martin Haile. His 'Queen Mary of Modena' is a genuine biography of the woman with whom ostensibly

it deals, rather than an essay in political history or an account of the influence exercised by James II.'s wife upon the destinies of England. Close as has been the intellectual tie between England and Italy since the days of Petrarch and Chaucer, Mary of Modena is the only Italian princess who ever became the consort of an English king. For most people she is merely a name, and, when remembered at all, is generally associated with certain doubts relative to the legitimacy of James III. Bishop Burnet handed on to the Whig historians of the eighteenth and nineteenth centuries a bad opinion of her, nor would the general reader attach much weight to the eulogistic words of Saint-Simon, who says: "The life and death of this Queen of England are comparable with those of the greatest saints."

Mr. Haile, in his extensive study of Mary Beatrice's life and character, has the advantage of drawing upon a copious correspondence. Naturally the most interesting portion of this covers the years 1685-1690—that is to say, the period of James II.'s reign and of his first years in exile. Regarding Mary's talents as a letter-writer, it is not possible to speak in language of extravagant praise. Mr. Haile begins his book with a quotation from the Duc de Broglie concerning the inestimable value to the historian of correspondence, and then proceeds: "Nothing can so make the dry bones of History live, or make us realize any given epoch of the past, as the perusal of the letters and dispatches of the actors in its scenes." Unfortunately Mary Beatrice, however pious and affectionate, had not the gift of communicating to paper any of the charms she may have possessed. The following passage from a letter written to the Cardinal d'Este on February 26, 1689, gives a fair sample of her epistolary style.

"It is a great consolation to the King and to me to hear of his Holiness's affectionate tenderness toward us. I hope we are not unworthy of it, and that the Pope will have the goodness to let the world see that his actions on our behalf correspond with his words, which in the present conjuncture would not be sufficient for us. . . . This King [Louis XIV.] certainly gives us great succours, and I hope his Holiness will do likewise, for without money we can hope for nothing good."

Later on in the same letter the writer speaks of being in great physical as well as mental anguish, but her correspondence contains little which is more sprightly than the passage we have just quoted. Mr. Haile has done as well as he could do on behalf of his heroine, and several of the documents he includes are well worth exhuming. But Mary of Modena, despite the depth of her attachment to the Roman Church and her connection by marriage with one of the most unfortunate of the unfortunate Stuarts, is not a very brilliant figure in English history.

Alexander Mackennal. By Dugald Macfadyen. London: James Clarke & Co. 1905.

The life of an English Nonconformist minister who was not conspicuous either as a pulpit orator or as a theologian, or as a leader in popular movements, would naturally seem to offer little opportunity to a biographer; but there may sometimes be more that is really helpful in the story of such a career as Mackennal's than in more dazzling records. His type of character is aptly described by Mr. Macfadyen as illustrating "the habit of probing a course of action to the heart of processes of thought; the wealth of points of view which sometimes puzzled his friends and interfered with his own decisiveness of speech and action; and, perhaps, also, that undervaluation of action in a world which is made by acts rather than thoughts, and the noble error of imputing to others readiness to give to thoughts and arguments and principles the same weight which he himself attached to them." This temperament wins the respect of the discerning few, but does not easily gain the cheers of a public meeting. Though Mackennal's name was not one to draw the crowd, his election to the chair of the Congregational Union, to the chair of the Council of Mansfield College, and to the secretaryship of the Free Church Council, at its origin, showed the value set upon his quiet and unselfish labors by the most competent judges.

If for no other reason, this book would have been worth writing for the revelation it gives of the rare courage of its subject. In March, 1900, it was Mackennal's duty to preach the official sermon to the Free Church Congress at Sheffield. It needs only a slight effort to recall the state of the public mind in England at this time, within the churches as well as outside them. It was the month after the relief of Ladysmith. At this moment of national intoxication, Mackennal uttered the following words:

"For many years the thought has pressed upon me that, if England is to fulfil her noblest destiny, she may be called to be a sacrificial nation. And I have had the dream that the sacrifice might be in the cause of peace. If England, in the plenitude of her power, should lay down every weapon of a carnal warfare, disband her armies, call her fleets from the sea, throw open her ports, and trust for her continual existence only to the service she could render to the world, and the testimony she would bear to Christ, what would happen? I know not, and the doubt, the knowledge that anyone who would speak of such a thing would not command a serious hearing, has made me a lonely man. But it comes again and again; the longing will not be repressed. It might be that Christ, whose 'finished work' is the trust of His people, would declare that the purpose of such a sacrifice is sufficient, that the example would be enough, and that the nation would continue to be, living and strong in the gratitude of all peoples. But, if otherwise, what then? Such a martyrdom would quicken the conscience of the world. . . . I am sure that so long as the vision of a martyred nation appears absurd and impossible, there will never be a Christian nation. This, also, I believe, that until our advocates of peace fairly apprehend that a nation martyred for Christ's sake may be within the counsel of God, their advocacy will lack its final inspiration and victorious appeal."

There is no thoughtful man who would not find treasure in this volume, but there is one class of the community to whom it may be particularly commended. When our younger clergy, of whatever church, are tempted to prophesy smooth things, let them read the biography of Mackennal. It will put iron into their blood.

Die Stahlindustrie in den Vereinigten Staaten. By Hermann Levy. Berlin: J. Springer. 1905.

This is a solid and thorough piece of monographic work, after the approved German fashion, with abundant footnotes, references and statistical tables, and with utilization of the various printed documents. Most of Dr. Levy's information and figuring is secured from familiar sources—the Reports of our Iron and Steel Association, and the huge mass of varied and unclarified matter published in the volumes of the Industrial Commission. But he has also sojourned and travelled in the United States, and conferred with various persons engaged in iron and steel production.

His subject is primarily the present state of the American iron industry. An introduction sketches the history of the industry since 1870, the effects of the tariff stimulus, the discovery and utilization of the extraordinary natural sources (a factor much more important than the tariff), the growth of the great iron companies, and the final formation of the overshadowing Steel Corporation. The bulk of the book is then given to an account of the state of the industry during the last five or ten years, and of the history and prospects of the Steel Corporation and two of its constituent concerns—the Tin-Plate and Wire monopolies. All this is set forth with discrimination and good sense, and with an array of figures and statements of fact that will make Dr. Levy's volume valuable even to Americans who have followed with care this remarkable phase of our economic history.

But Dr. Levy writes chiefly for Germans, and wishes to impress on his countrymen a conclusion which he justly thinks important for them, but which is also important for us. It is, that "dumping" is not the precise phenomenon shown in the recent exports of iron and steel from the United States. "Dumping" implies that a commodity is sold abroad or in some free market for less than cost, in order that the bulk of the supply may be sold at a better price in the home market. But our iron and steel is *not* sold abroad at less than cost. The price got abroad is high enough to pay for producing it; the domestic price is simply so much higher—it is an extravagant monopoly price, especially for such articles as steel rails and wire. The lesson for the German producers is plain: they must face here not sporadic "dumping" competition, but a permanent basis for an invasion of the world's markets, likely to become more serious whenever decreasing demand and falling prices appear in the United States. The lesson for the American consumer is not less plain: he is mulcted to pay excessive prices, kept up within the country because the tariff barrier prevents competition from without. In periods of activity like the present the American people pays for iron and steel—the great instruments of civilization—vastly more than is needed to give the producers a reasonable return; in periods of depression it still pays more, though not in the same degree.

Perhaps the growing competition with the Steel Corporation from concerns using the basic process will eventually call a halt to this sort of imposition; but, for the visible future, the situation is likely to remain substantially unchanged. The tariff on iron and steel, if ever needed as a stimulus for producers, is now an incubus for the community. How long will the American people submit to it?

The Structure and Development of Mosses and Ferns. By Douglas Houghton Campbell, Ph.D., Professor of Botany in the Leland Stanford Junior University. New York: The Macmillan Company.

There is nothing on the title-page to indicate that this is a second edition, carefully revised throughout and embodying a great deal of new matter. Professor Campbell is an ardent investigator, to whom Cryptogamic Botany is much indebted for substantial advance in certain directions, and he is, moreover, a clear expositor. The present work contains an interesting study of the probable origin of the great developmental lines along which our flowering plants and their flowerless allies have come. The riddles are not by any means all read yet, for there are many vast gaps which it is hoped may be filled by hints from the more extended study of fossils; but the progress of late has been steady, and, on the whole, satisfactory. It is, perhaps, worth while to cast into untechnical language the conclusions which have been adopted by Professor Campbell in the closing chapter of this useful volume. We hope it will not seem too much like attempting to present a part of the subject in words of one syllable.

The two great classes of seed-bearing plants are distinguished from each other in the following manner: One class (the Gymnosperms, the Conifers, and their kindred) have no true seed-vessels, but the seeds are practically naked, whereas the second class (the Angiosperms) possess true seed-vessels in which the seeds ripen. The second class comprises by far the greater number of our flowering plants. This second class is plainly divided into two subordinate classes, which are so clearly separated from each other that they are distinguishable by flowers, seeds, and, for the most part, also by the leaves and the stems. These two classes are called respectively monocotyledonous and dicotyledonous, according as they possess one or two "seed-leaves" in the ripened seed. Now the puzzle has been to find out the relations which these two groups bear to each other and to the naked-seeded plants, or Gymnosperms, of which we have just spoken. Under all these questions lies another equally perplexing, as to the relations which the flowering plants bear to the flowerless. Professor Campbell says (p. 605), "We believe that the evidence we have at present points to the Monocotyledons as the more primitive of the two divisions of the Angiosperms, from which later the Dicotyledons branched off. . . . It is also becoming evident that the dicotyledonous habit may have developed more than once." The seed-plants "represent not one single line of development, but at least two, and perhaps more, entirely independent ones, having their origin from widely separated stocks."

It is gratifying to remember that American botanists have contributed largely to the researches in plant-morphology upon which the above general conclusions are based.

BOOKS OF THE WEEK.

Aldrich, Richard. A Guide to the Ring of the Nibelung. Boston: Oliver Ditson Co. $1.25.
Almanach de Gotha, 1906. Lemcke & Buechner.
Bunyan's Pilgrim's Progress. Edited by James H. Moffat. Macmillan Co.
Burr, Agnes Rush. Russell H. Conwell: The Work of the Man. Philadelphia: The John C. Winston Co. $1.
Campbell, Wilfred, Collected Poems of. Fleming H. Revell Co. $1.50.

The Rewritten and Up-to-Date
WALLACE'S RUSSIA $5 retail.

This remarkable book which, while THE authority, is interesting and at times even humorous, is steadily growing in popularity. THE NATION says it is "invaluable—nay, indispensable"; while THE LONDON TIMES says it is "in the same class as Mr. Bryce's 'American Commonwealth.'"

The Companionship of Books
AND OTHER PAPERS
BY
FREDERIC ROWLAND MARVIN

8vo, net $1.50; by mail $1.65

Agreeable and informing essays on varied subjects. Reminiscences of interesting people, ideas suggested by wide reading, quaint and curious observations of life and experience, are treated in a thoughtful, sympathetic manner.

Readers who appreciate a book which they can open anywhere, sure of a pleasant and profitable half hour, will find in "The Companionship of Books" a work altogether suited to their taste.
